BIOL510001  
Microbiome and Human Disease Altindis, Emrah  
Spring 2022  
For thousands of years, humans have thought of themselves as single autonomous organisms. With new sequencing technologies and experiments, we are learning that the human microbiome and commensal organisms are an important aspect of host biology, and change the idea of who we really are. Recent data suggest that we are more than Homo sapiens, but a symbiotic-organism that is surrounded with trillions of microorganisms in all surfaces. Recent studies suggest that the human microbiome and commensal microbes have important roles in human health and disease. Indeed, the gut microbiota aid in normal digestion, metabolism of nutrients and drugs, and development of the gut and immune system. Reduced bacterial diversity, as well as alterations in the microbiota composition, have been associated not only with gastrointestinal disease, but also obesity, diabetes, and metabolic syndrome. Direct evidence now suggests that transfer of the microbiome can play a role in host phenotypes, homeostasis, behavior, and disease pathogenesis. Using current scientific literature and reviews, we will investigate the role of the microbiome in human health and disease. Students will make short presentations of the papers, and the class will discuss the methodology and findings of the papers.

BIOL515001  
Vaccine Development and Public Health Fofana, Ismael B  
Spring 2022  
Despite more than three decades of research, the development of an efficacious HIV/AIDS vaccine remains elusive. Nonetheless, the quality of knowledge generated by HIV researchers is impressive. It is no surprise that potent Ebola virus and Zika virus vaccine candidates have been developed in a short time span. This class will discuss the difficulties and successes encountered with vaccine development (AIDS, tuberculosis, malaria, small-pox, measles, poliomyelitis, tetanus, Ebola, and Zika). At a time when questions have been raised about the link between childhood vaccination regimens and autism, we will discuss the ethics, economics, problems, and benefits of modern day vaccination.  
Credits: 3  
Room and Schedule: Higgins Hall 310 TuTh 12:00 Noon-01:15PM Satisfies Core Requirement: None

BIOL523001  
Immunity and Infectious Disease Williams, Kenneth C  
Spring 2022  
Satisfies the advanced experience requirement for the Biology major. This course will focus on immune cells, the immune system's response to viral and bacterial infection and the pathogenesis resulting from these responses. Topics will include questions of self and non-self in immune responses, the role of mucosal immunity and gut flora in immune responses and pathogenesis, AIDS pathogenesis, vaccines, and cutting edge technological approaches to immune therapy. Reading materials will consist of a basic immunology text, classical primary papers, and research reports.  
Credits: 3

BIOL538001  
Topics in Biomechanics DEPT  
Spring 2022  
This course will explore the physical principles underlying biological processes and mechanisms including movement, feeding, architecture, and transport. Drawing on physics and mechanical engineering, the course will explore how organisms swim, fly, walk, and consume resources, how they respond to moving fluids, and the relationship between their size and design of mechanical systems. Underlying all these topics will be hands-on investigations of how biological materials (e.g., wood, muscle, bone, skin, etc.) influence the mechanical behavior of complex life forms. The course will prepare students for more in-depth

explorations of other related disciplines including ergonomics, orthopedics, kinesiology, and sports medicine.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None

Prerequisites: BIOL3030. Familiarity with basic Newtonian physics and mechanics is recommended.

BIOL542002

Cancer As A Metabolic Disease Seyfried, Thomas N

Spring 2022

Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands.

Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3

BIOL543001

Genomics and Personalized Medicine Connolly, Timothy J

Spring 2022

Satisfies the advanced experience requirement for the Biology major. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, allowing for more informed choices about health. The students will be exposed to the scientific concepts and technologies empowering personalized medicine. Through lecture, research paper reading and discussion the students will understand how human genomic information has impacted current topics in biomedical research. Students will write a research paper focused on how genomic information has advanced understanding of a human disease and how translation of genomic information will impact treatment or disease detection in the future.

Credits: 3

Room and Schedule: Higgins Hall 260 MW 03:00PM-04:15PM Satisfies Core Requirement: None

BIOL545001

Advanced Lab in Cell Imaging Judson, Bret

Spring 2022

This course satisfies the advanced experience requirement for biology majors.. This course will survey the various visualization techniques and instruments used by scientists and biomedical

researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

Credits: 2

## Capstone Courses: Fall 2021

UNCP550101

Capstone: Authenticity and Human Development Bracher, Elizabeth R;Dacey, John S  
Fall 2021

Seniors only. Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The path to becoming a more authentic person is twofold: coming to know who you are and who you are not as well as sharing this information with others. As you progress along this path, you become more authentic and are rewarded for doing so. Why should you want to be more authentic? Misrepresenting yourself costs energy.

More importantly, people just seem to know intuitively who is authentic and who is not. If you are, you will be seen as more trustworthy, more deserving of love, more skilled as a leader, and more likable. This course will help you to better recognize and improve on the areas of personal development called for in every Capstone course: your education up to now and in the future; your relationships; your role in society; your vocational callings and choice of career; and your spirituality. Assignments include group projects, personal projects, and lots of small and large group discussions.

Capstone: Life and Career Planning Capalbo, Robert F  
Fall 2021

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: The Balancing Act Olivieri, Scott D  
Fall 2021

Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. College students have many competing demands: academics, friends, family, faith, service, and work all need attention. This just in--after college, it gets worse! This course begins with students reflecting on their commitments and choices up to now. Students will then establish personal priorities and learn strategies to become engaged in their future long-term commitments to career and community, while attending to family, friends, faith, personal well-being, and leisure. Readings will explore the changes ahead for young professionals balancing family, graduate school, and/or careers. The final assignment will be developing a personal road map to a full, meaningful, and balanced life.

Capstone: A Life Well Lived DeChiara-Quenzer, Deborah  
Fall 2021

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only.. This course engages students in serious reflection on what it means to have "a life well lived." It is advantageous to do this reflection at this time in your life, as it affords you time and opportunity to shape your life going forward. What kind of life do you hope to live? What will bring you peace and satisfaction--dare we say, even happiness? Students will be asked to examine themselves by looking both backwards and forwards in many dimensions of their lives (education, ethics, relationships, career, etc.) while learning what others have said about having a meaningful life.

Capstone: Surviving Life with Humor Jayasundera, Thusitha  
Fall 2021

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. A sense of humor can be a powerful tool that helps us navigate real-life situations that may otherwise cause us anxiety and distress. This course aims to sharpen your emotional intelligence through humor, and help cultivate values and attitudes that will serve you well in life. Class discussions will allow us to acknowledge another point of view with empathy, and convey our own ideas with humor and humility. We will study the Capstone foundations (spirituality, vocation, citizenship, relationships) through the lens of humor and, hopefully, equip you with yet another valuable tool for success, as you embark on the next chapter of your lives.

Capstone: Holistic Living Spector, Rachel E  
Fall 2021

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This seminar will examine spirituality, community, personal and family relationships, and education through the lenses of cross-cultural holistic health and healing practices. Selected readings, films, and field visits will assist you to visualize the relationships of health to the holistic aspects of your life and that of the multicultural communities in which you will live and work. Through this study, the course will provide insight into the nature of health, the comparisons of health and healing practices cross culturally, and the consequences of health-related choices.

Capstone: Desire and Discernment Muldoon, Timothy P  
Fall 2021

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course aims to help students review the process of their education and preview the process of making long-term commitments by taking a long, loving look how we experience desire, and how we act upon those desires to construct a life well lived. The course will first expose students to spiritual practices of discernment, rooted in the Ignatian and Benedictine spiritual traditions. Second, it will involve careful thinking about stories of discernment which involve the sorting and pruning of desire. Discussions will reflect on these stories, in order to help each other consider what they mean for our own lives.

Capstone: Leadership and Mindfulness Waddock, Sandra A  
Fall 2021

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. No matter what your major, you will participate in groups and organizations that will consistently ask or expect you to lead. The best leader is authentic, has integrity, is self-and other-aware, and acts with this awareness firmly in mind. Good leaders, that is, act mindfully with respect for the people and world around them. This course explores your development as a mindful focusing inward and outward, reflecting on where you have come from and where you are going, what type of world you want to live in, your relationships with others, and how you can be an effective leader.

Capstone: Finding and Following Life's Calling Harrington, J  
Fall 2021

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. We live in changing times. Major social trends are impacting us as individuals, employees, family members, and citizens. These changes call on us to play a much more pro-active role in managing our lives (where possible) and to respond to the unexpected callings we hear. Doing this effectively requires an in-depth self-understanding coupled with a heartfelt desire to live a life of meaning. This course will help students develop a clearer sense of identity through a rigorous self-assessment process. It will help each answer the questions: Who am I? How can I make a difference in the world?

Capstone: Mindfulness and Storytelling Mathieu, Paula  
Fall 2021

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. This course will invite students to reflect on their humanity by exploring storytelling and naming through various methods. Via reading short stories and essays, we will engage how others name the world in an effort to change it. By interviewing an elder, we will learn awareness and skills of listening to inform our own views of life. And via a focus on mindfulness nonjudgmental awareness of the present moment while observing ones thoughts, emotions, and reactions we will engage our own internal storytelling to reflect on ways our inner rhetoric can help us or hold us back.

#### UNCP557001

Capstone: Adulging Arnold, Karen  
Fall 2021

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Most college students in their early 20s feel neither fully adult nor fully competent in the tasks, responsibilities, and behaviors that are traditionally associated with grown-up life. In this class, students will take stock of their journey to adulthood so far and look ahead to what relationships, work, citizenship, and spirituality might look like in post-college life. Readings on the developmental psychology of young adulthood will be paired with popular media, exercises, and reflective writing to help students progress in their own "adulging" as they prepare to negotiate the transition out of college. Students may sign-up for this cross-listed course under UNCP Capstone or through the Lynch School ELHE department.

If you are, you will be seen as more trustworthy, more deserving of love, more skilled as a leader, and more likable. This course will help you to better recognize and improve on the areas of personal development called for in every Capstone course: your education up to now and in the future; your relationships; your role in society; your vocational callings and choice of career; and your spirituality. Assignments include group projects, personal projects, and lots of small and large group discussions.

Capstone: Life and Career Planning Capalbo, Robert F  
Spring 2022

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: Your Future, Your Choice Michalczyk, Susan A  
Spring 2022

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Reflecting upon your BC years and looking ahead, in Capstone you'll center yourself in your present to process learning and relationships. Journeying forward, you'll learn more about yourself with each choice you make. Written and visual narratives, fiction, autobiography and film connect your college experience with numerous aspects of your life -- past, present, future. In our search for meaning, we draw strength from relationships: to self, to others, to God. The profoundest relationships build upon identifying the self as other, recognizing the sacred in the profane. Choosing a life of mutual respect defines the human condition at its best.

Capstone: The Balancing Act Olivieri, Scott D  
Spring 2022

Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. College students have many competing demands: academics, friends, family, faith, service, and work all need attention. This just in--after college, it gets worse! This course begins with students reflecting on their commitments and choices up to now. Students will then establish personal priorities and learn strategies to become engaged in their future long-term commitments to career and community, while attending to family, friends, faith, personal well-being, and leisure. Readings will explore the changes ahead for young professionals balancing family, graduate school, and/or careers. The final assignment will be developing a personal road map to a full, meaningful, and balanced life.

Capstone: First Gen Success Gentilella, Dacia J

Spring 2022

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation.. Where are we really living day to day? Are we holding onto our past? Are we planning for and overwhelmed by the future? What happened to the present? We will explore the particular challenges of first gen students including the trailblazing necessary to enter and thrive in college and the way in which their past can be seen as an accomplishment that informs their lives but doesn't hold them back from exploring the world in a fearless and unfolding way.

Capstone: Growing Up Ethnic in America Sarr, Akua

Spring 2022

In this seminar students will read writing that depicts a variety of experiences but suggest that what constitutes an American identity is far from settled. Ethnic difference has a profound effect on personal and social understandings of what it means to be an American. As we discuss the literature, students will be expected to share their own personal narratives of growing up-- stories of race, ethnicity, class, gender, faith, and nationality--and what it means to be American. Some of the writers we will read include: Jhumpa Lahiri, Amy Tan, Louise Erdrich, Chang Rae-Lee, Sherman Alexie, Sandra Cisneros, Junot Diaz, Edwidge Danticat, Mat Johnson, and Ta-Nehisi Coates.

UNCP552201

Capstone: Creativity and Self Roberts, Susan A

Spring 2022

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the result in art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland.

Capstone: Your Roaring 20s (and Beyond) Regan, Tracy L

Spring 2022

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. As your graduation from Boston College looms, soon you'll have the opportunity to join the chorus of people proclaiming that college was the best four years of their life. Why does everyone say that and do you feel that way? If not, will you feel that way at some point in the future? The coveted real world awaits you where you'll finally have a chance to go set the world aflame. As you approach this important juncture in your life, this class will provide you the opportunity to reflect and discuss your time on the Heights all the while helping you prepare for the decade(s) ahead. How did you grow during your time here? What lessons did you learn? Do you have any regrets? What are your most cherished memories? Did you become a person for others? And how will you carry the lessons you learned into the next proverbial chapter of your life as you navigate a career, relationships, a family, getting older, etc.? You'll have a chance to read a variety of viewpoints about the next decade of your life and beyond. As a class, we'll consider your academic, professional, and personal development in the context of relationships, spirituality, and citizenship. You'll join in conversation with your peers, under the guidance of an older economist who has experienced a lot of this already, and be ready to engage in lively dialogue on a weekly basis with the opportunity to reflect, think, and debate matters through a series of written assignments.

UNCP553201

Capstone: Boston College/Your Life Burns, John J

Spring 2022

This seminar will focus on the historical development of Boston College and the continually evolving interaction between its traditions and its students. Students will do archival research on some aspect of Boston College in which they have a personal interest and will record oral histories with faculty, administrators, and alumni who can describe the ambiance and personalities of different periods that have shaped the modern university. All students will write a series of reflective essays on their experience with Boston College traditions and the impact it has had on their own personal views of themselves, their pasts, and their futures.

Capstone: Desire and Discernment Muldoon, Timothy P

Spring 2022

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course aims to help students review the process of their education and preview the process of making long-term commitments by taking a long, loving look how we experience desire, and how we act upon those desires to construct a life well lived. The course will first expose students to spiritual practices of discernment, rooted in the Ignatian and Benedictine spiritual traditions. Second, it will involve careful thinking about stories of discernment which involve the sorting and pruning of desire. Discussions will reflect on these stories, in order to help each other consider what they mean for our own lives.

Capstone: Poets, Philosophers, and Mapmakers McNellis, Paul W

Spring 2022

We go through life with mental maps of reality in various degrees, implicit or explicit. A liberal arts education presupposes such a map of the intelligible world. Is it accurate? What does your map of reality look like? How has it changed since freshman year? The goal of the seminar is to help you see what kind of map you implicitly have now and to begin to ask what you want the map to look like ten years after graduation. How do you develop an open rather than closed map?

Capstone: Finding and Following Life's Calling Harrington, J

Spring 2022

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. We live in changing times. Major social trends are impacting us as individuals, employees, family members, and citizens. These changes call on us to play a much more pro-active role in managing our lives (where possible) and to respond to the unexpected callings we hear. Doing this effectively requires an in-depth self-understanding coupled with a heartfelt desire to live a life of meaning. This course will help students develop a clearer sense of identity through a rigorous self-assessment process. It will help each answer the questions: Who am I? How can I make a difference in the world?

UNCP556501

Capstone: Moral of Story Sullivan, Ethan A

Spring 2022

Hanging in Boston's Museum of Fine Arts is the magna opus of Paul Gauguin, "Where Do We Come From? What Are We? Where Are We Going?". Gauguin left family, friends, and a career in banking to flee to Tahiti, in search of life's meaning. "Where Do We Come From? What Are We? Where Are We Going?" is his ultimate representation of these philosophical questions. We will move through a different artistic medium--that of the short story--as we ask those same questions. We will examine complex plots and characters in the hopes of exploring our own stories.

## Chemistry Courses: Fall 2021

CHEM110501

Chemistry and Society I Morabito, Joseph V

Fall 2021

For non-science majors or for those who do not require a lab science course. This is a two-semester sequence with the emphasis during the first semester placed on basic chemical principles and their application to environmental issues. Topics covered include air and water pollution, global warming, ozone depletion, hazardous waste, and energy use and alternative energy sources. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

CHEM111701  
Honors Modern Chemistry I Waegele, Matthias  
Fall 2021  
This course is intended for students from any major (including undecided) with a strong foundation and interest in chemistry. CHEM1117 begins with the theoretical description of atomic and molecular structure and with examples of modern experimental techniques for visualizing and manipulating individual atoms and molecules. The laws of thermodynamics and kinetics are studied to understand why chemical reactions occur at all, why it is that once reactions start they can't go all the way to completion, and how molecules act as catalysts to speed up reactions without being consumed themselves.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM Satisfies Core Requirement: Natural Science

Prerequisites: Permission of Department Corequisites: CHEM1119

Cross-listed with: None Frequency: Every Fall

CHEM116101

Life Science Chemistry

Hartmann, Nathaniel J Fall 2021

This course first introduces basic chemical principles in preparation for a discussion of the chemistry of living systems that forms the major part of the course. Organic chemical concepts will be introduced as necessary, and applications will be made wherever possible to physiological processes and disease states that can be understood in terms of their underlying chemistry.

Credits: 3

Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 10:30AM-11:45AM Satisfies Core Requirement: None

Prerequisites: None Corequisites: CHEM1163 Cross-listed with: None Frequency: Every Fall

Student Level: Undergraduate Comments: None

#### CHEM223101

Organic Chemistry I Deak, Holly L

Fall 2021

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 MWF 09:00AM-09:50AM Satisfies Core

Requirement: None

Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232

Corequisites: CHEM2233

Cross-listed with: None Frequency: Every Fall

Student Level: Undergraduate Comments: None

Status: Offered

#### CHEM223102

Organic Chemistry I Deak, Holly L

Fall 2021

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None

Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232

Corequisites: CHEM2233

Cross-listed with: None Frequency: Every Fall

Student Level: Undergraduate Comments: None

#### CHEM223302

Organic Chemistry Laboratory I Byers, Jeffery

Fall 2021

Laboratory required of all students enrolled in CHEM2231. One four-hour period per week. Students acquire fundamental organic lab techniques in the context of principles learned in the lecture course. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1

Room and Schedule: Merkert Chemistry Center 18 Tu 12:00 Noon-03:50PM Satisfies Core Requirement: None

CHEM445001  
Modern Laboratory Techniques of Photocontrolled Radical Polymerization Niu, Jia Fall 2021  
Polymer science is indispensable in providing materials to support our current lifestyle and may provide important solutions to a sustainable and eco-friendly society in the future. This course will survey and analyze the contemporary laboratory techniques of photocontrolled radical polymerization. Participants will have hands-on experience of developing methods to control reactivities in polymerization and gain valuable experience in the concept and practice of reaction optimization and product analysis in the modern polymer science.  
Credits: 1  
Room and Schedule: Merkert Chemistry Center 120 Th 05:30PM-08:30PM Satisfies Core Requirement: None

CHEM446101  
Biochemistry I Weerapana, Eranthie Fall 2021  
This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM Satisfies Core Requirement: None  
Prerequisites: CHEM2231 and BIOL2000 and CHEM2232 or equivalent. Corequisites: None

CHEM446501  
Biochemistry (Chemistry Majors) Gao, Jianmin Fall 2021  
This course is an accelerated one-semester survey of the basic principles of biochemistry emphasizing a broad understanding of the chemical events in living systems. Although the course is an introduction to biochemistry, prior proficiency in general and organic chemistry is required. Topics will include structure and function of biological molecules, including proteins, enzymes, nucleic acids and biological membranes. Also covered in the course will be bioenergetics, metabolism and photosynthesis. Experimental methods will also be discussed as they relate to course topics. This course fulfills the biochemistry requirement for the Chemistry major.  
Credits: 3  
Room and Schedule: Campion Hall 302 TuTh 09:00AM-10:15AM Satisfies Core Requirement: None  
Prerequisites: CHEM2232 and CHEM2231. Non-chemistry majors are requested to consult with the instructor before registering for this course.

#### CHEM447501

Physical Chemistry I Mohanty, Udayan Fall 2021

This course deals with the foundations and applications of thermodynamics and reaction kinetics. Topics include: (1) classical thermodynamics, including the Laws of Thermodynamics, Helmholtz and Gibbs energies, chemical potential, and thermodynamic descriptions of phase equilibria and chemical equilibrium; (2) kinetic theory of gases; (3) chemical reaction rate laws and mechanisms.

Credits: 3

Room and Schedule: Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM Satisfies Core Requirement: None

Prerequisites: None

Corequisites: MATH2202 and PHYS2100-2101/2200-2201 are pre- or co-requisites. Cross-listed with: None

CHEM551201  
Peptide Therapeutics Gao, Jianmin  
Fall 2021  
The landscape of therapeutic drugs had been dominated by synthetic small molecules and monoclonal antibodies until recent years. Adding into these well-known modalities, peptides have been gaining increasing attention as therapeutics, which is evident with the rapidly increasing number of peptide drugs receiving approval by the Food and Drug Administration. This course seeks to survey different classes of peptide drugs. Importantly, with selected examples of peptide drugs, we will discuss the biochemical basis of their mechanism of action as well as the medicinal chemistry efforts that ultimately lead to these powerful therapeutic drugs.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 129 TuTh 12:00 Noon-01:15PM Satisfies Core Requirement: None  
Prerequisites: CHEM2232 and CHEM4461 or Other equivalent biochemistry course, such as CHEM4465, is also acceptable.

CHEM552101  
Introduction to Machine Learning with Applications to Chemistry Tristan, Jean-Baptiste  
Fall 2021  
In this hands-on course, we will study the fundamental methods in machine learning to solve problems in science, and more specifically chemistry. We will first learn about the basic models and algorithms in machine learning and cover more advanced methods such as neural networks and Gaussian processes. We will apply these methods to chemistry problems such as learning the potential energy surface of a molecule, optimizing the geometry of a molecule, discovering the transition structure of a chemical reaction, or estimating the macroscopic properties of chemical reactions. The course will involve a significant amount of programming using the Python language. To the extent possible, mathematics will be kept to a minimum, but a solid understanding of calculus is necessary. Some familiarity with basic linear algebra and probability is preferable.  
Credits: 3  
Room and Schedule: Gasson Hall 310 TuTh 04:30PM-05:45PM  
Satisfies Core Requirement: None Prerequisites: CSCI1101 and CSCI1102 Corequisites: None

CHEM552701  
Metallobiochemistry DEPT  
Fall 2021  
The purpose of this course is to expose students to the wide scope of metal-dependent enzymes and proteins in biology and the mechanism by which these metallocofactors promote unique and complex biochemical transformations. By the end of the course, students will have:  
(1) a detailed appreciation for the history, direction, and future of the field of metallobiochemistry, and (2) a set of skills that allows them to critically interpret biochemical and spectroscopic data from the primary literature and infer the structure, function, and mechanisms of unknown metalloproteins.  
Credits: 3  
Room and Schedule: None Satisfies Core Requirement: None  
Prerequisites: One year of Organic Chemistry (CHEM2231-2232 or equivalent) and Biochemistry (CHEM4461-4462 or CHEM4465 or BIOL4350 and BIOL4400)

CHEM553101  
Modern Methods in Organic Synthesis I Morken, James P;Wasa, Masayuki  
Fall 2021  
Survey and analysis of reactions employed in the synthesis of medicinally significant compounds. An in-depth understanding of the mechanistic details for each transformation will be emphasized. Topics will relate fundamental structural and electronic properties to issues of chemical reactivity. An emphasis will be placed on carbon-carbon bond and ring forming reactions.  
Credits: 3

CHEM553901  
Principles and Applications of NMR Spectroscopy Jayasundera, Thusitha  
Fall 2021  
Nuclear Magnetic Resonance (NMR) is the bread and butter for all organic chemists. This course will introduce the theory of NMR spectroscopy, with concurrent hands-on experiments that illustrate these concepts firsthand and make the subject matter more interactive. Applications of NMR in biochemistry will also be discussed, with a guided hands-on project that exemplifies how NMR is utilized to study macromolecules (such as proteins and nucleic acids), providing valuable practical experience. Material covered in this class will prepare you well for graduate studies or a chemistry/biochemistry-related career in industry.  
Credits: 3

CHEM556001  
Principles of Chemical Biology Zhou, Huiqing  
Fall 2021  
An introduction to the chemistry of biological macromolecules, including proteins, nucleic acids, and carbohydrates. Students will learn the structure and nomenclature of the monomer building blocks as well as the macromolecules. Chemical principles that define secondary and tertiary biomolecular structure as well as state-of-the-art chemical (or chemical-biological) synthetic procedures will be presented. Examples of specific types of binding interactions, catalysis, or recognition processes as viewed from a chemical perspective will be discussed.  
Credits: 3

CHEM667601  
Physical Chemistry: Principles and Applications Bao, Junwei L  
Fall 2021  
This course intends to build a solid and rigorous foundation for chemistry graduate students to understand chemistry and materials at the microscopic level, and study the physical nature of bonding and chemical reaction dynamics quantitatively. We focus on fundamental principles of quantum mechanics and their connections to chemistry/chemical physics. Topics covered in this course include principles of quantum mechanics, the connections between classical and quantum dynamics, exactly solvable systems, variational principle, introductory perturbation theory, and Hartree-Fock theory. We will also cover some necessary mathematical tools that are tremendously useful in understanding modern physical chemistry.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 MWF 08:00AM-08:50AM Satisfies Core Requirement: None  
Prerequisites: This course is theory/math-intensive and involves active learning. We strongly recommend students who are well prepared in introductory quantum mechanics (one-semester undergraduate-level quantum mechanics or equivalent) and in math (multivariable C...

CHEM999801  
Doctoral Cumulative Examinations DEPT  
Fall 2021  
This course consists of a series of cumulative written examinations that test the student's development in his or her major field of interest (organic, inorganic, analytical, physical, biochemistry) and critical awareness and understanding of the current literature. Six of sixteen exams must be passed over a two-year period.  
Credits: 1  
Room and Schedule: Merkert Chemistry Center 130 W 07:00PM-10:00PM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None  
Frequency: Every Fall, Every Spring Student Level: Graduate Comments: None Status: Offered

CHEM999901  
Doctoral Continuation Mahoney, Dale L  
Fall 2021  
All students who have been admitted to candidacy for the Ph.D. degree are required to register and pay the fee for doctoral continuation during each semester of their candidacy. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation.  
Credits: 1  
Room and Schedule: By Arrangement Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None

## Chemistry Courses: Spring 2022

CHEM110601  
Chemistry and Society II Morabito, Joseph V Spring 2022  
For non-science majors or for those who do not require a lab science course.. This is a two-semester sequence. The second semester focuses on the basic principles of organic chemistry and topics covered include the chemistry of life, nutrition, medicine, and agriculture. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.  
Credits: 3  
Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 03:00PM-04:15PM Satisfies Core Requirement: Natural Science  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None Status: Offered

CHEM111001  
General Chemistry II Hartmann, Nathaniel J Spring 2022  
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.  
Credits: 3  
Room and Schedule: None  
Satisfies Core Requirement: Natural Science Prerequisites: CHEM1109  
Corequisites: CHEM1112 Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None Status: Offered

CHEM111002  
General Chemistry II Hartmann, Nathaniel J Spring 2022  
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 127 MWF 01:00PM-01:50PM Satisfies Core Requirement: Natural Science  
Prerequisites: CHEM1109 Corequisites: CHEM1112 Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None Status: Offered

CHEM111003  
General Chemistry II Young, Allison P Spring 2022  
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals.

Room and Schedule: Merkert Chemistry Center 129 F 02:00PM-02:50PM Satisfies Core Requirement: Natural Science  
Prerequisites: CHEM1109 Corequisites: CHEM1112 Cross-listed with: None Frequency: Every Spring  
Student Level: Undergraduate Comments: None  
Status: Offered

CHEM111028  
General Chemistry II Reich, Shoshana Spring 2022  
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 0  
Room and Schedule: Merkert Chemistry Center 129 W 02:00PM-02:50PM Satisfies Core Requirement: Natural Science  
Prerequisites: CHEM1109 Corequisites: CHEM1112 Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None  
Status: Offered

CHEM111031  
General Chemistry II Hartmann, Nathaniel J Spring 2022  
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

CHEM111501  
Fundamentals of Chemistry Fox, Daniel J  
Spring 2022  
This course is designed to prepare students for the first semester of General Chemistry. The course will consist of two major parts, the first of which will focus on mathematical skills that are fundamental to the deeper understanding of chemical concepts, including but not limited to: ratios, percentages, algebra, exponentials, base 10, and natural logarithms. The second part of the course will focus on basic chemical concepts such as atomic structure and isotopes, balancing chemical equations, and stoichiometry. Once they have mastered these proficiencies, students will have a strong foundation in the skills necessary to succeed in higher level chemistry courses.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 MWF 01:00PM-01:50PM Satisfies Core Requirement: None

CHEM111801  
Honors Modern Chemistry II Morken, James P  
Spring 2022  
This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.  
Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM Satisfies Core Requirement: Natural Science  
Prerequisites: CHEM1117 or Permission of Department Corequisites: CHEM1120  
Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None Status: Offered

CHEM111802  
Honors Modern Chemistry II Kativhu, Elton T  
Spring 2022  
This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.

CHEM224203  
Honors Organic Chemistry II Soni, Chintan P  
Spring 2022

This course is a continuation of the CHEM1117-1118 honors sequence and will concentrate on the structure, bonding, and reactivity of organic compounds. Particular emphasis will be placed on stereochemistry, conformational analysis, reaction mechanisms, principles of organic synthesis, and modern spectroscopic methods.

Credits: 0  
Room and Schedule: Merkert Chemistry Center 129 Tu 06:00PM-06:50PM Satisfies Core Requirement: None

CHEM332001  
Introduction to Geochemistry Wang, Xingchen  
Spring 2022

This course will apply the principles of chemistry to investigate the chemical compositions of the Earth system, including the atmosphere, hydrosphere, biosphere, and lithosphere. Topics will include the origin of elements in the solar system; distribution of elements in the core, mantle, and crust; cycling of carbon, nitrogen, phosphorus, and other elements in the Earth's surface environments; radiometric dating techniques; and stable isotope geochemistry.

Credits: 3

CHEM332201  
Introduction to Inorganic Chemistry Fox, Daniel J  
Spring 2022

Though not required, one year of Organic Chemistry (CHEM2231-2232 or CHEM1118 and CHEM2241) is recommended as a prerequisite for this course.. This course offers an introduction to inorganic chemistry. Topics include: applications of group theory to describe structure and bonding, coordination chemistry, organometallic chemistry, bioinorganic chemistry, crystal packing, and semiconducting and superconducting materials.

Credits: 3

CHEM446201  
Biochemistry II Zhou, Huiqing Spring 2022

This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

Credits: 3  
Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM Satisfies Core Requirement: None

Prerequisites: CHEM4461 and CHEM2232 or equivalent. Corequisites: None

Status: Offered

#### CHEM447601

Physical Chemistry II Bao, Junwei L

Spring 2022

This course intends to build a foundation for understanding the structures of matter and chemical reactions via quantum mechanics and the relationship between structures and macroscopic properties via statistical mechanics. This course serves as the gateway to appreciating modern chemical science with rigorous and quantitative physical models.

The topics to be covered include basic principles of quantum mechanics, exactly solvable systems, variational principle, molecular orbital theory and Huckel theory, qualitative solid-state band structure, basic group theory, Boltzmann distribution, ideal-gas statistical thermodynamics, heat capacity of simple solids, and transition-state theory for reaction rate. Credits: 3

Room and Schedule: Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM Satisfies Core Requirement: None

Prerequisites: MATH2202 and PHYS2101 or PHYS2201 Introductory Physics II (may be taken concurrently). MATH2210 Linear Algebra and PHYS3100 Vibrations and Waves are recommended but not required.

Corequisites: MATH2202 and PHYS2100-2101/2200-2201 are pre- or co-requisites. Cross-listed with: None

Frequency: Every Spring Student Level: Undergraduate Comments: None

Status: Offered

#### CHEM447602

CHEM551001  
Drug Discovery and Medicinal Chemistry Deak, Holly L  
Spring 2022  
This course will provide an overview of the drug development process with an emphasis on the discovery and pre-clinical phases of developing a therapeutic agent. Students will gain an understanding of the fundamental concepts of drug design including the relationships between physicochemical properties, pharmacokinetics, pharmacology, and biological mechanism of action and the chemical structure of drug candidates. Case studies of important drugs will be invoked to facilitate discussion surrounding these topics. The chemical synthesis of these drugs will also be emphasized. The course will conclude with guest lectures from scientists at the forefront of the field. The foundational understanding of drug discovery and development gained in this course will be beneficial to those considering research and healthcare careers.  
Credits: 3  
Room and Schedule: Higgins Hall 310 MWF 11:00AM-11:50AM Satisfies Core Requirement: None

CHEM552301  
Organometallic Chemistry Byers, Jeffery  
Spring 2022  
The course is intended for graduate students and advanced undergraduates who have completed or are currently enrolled in organic and inorganic chemistry courses.. This course will present concepts of organometallic chemistry, e.g., the chemistry of compounds that have bonds between metals and carbon. Organotransition metal chemistry will be emphasized. Among the areas to be covered will be structure and bonding in organotransition metal complexes, ligand systems, catalysis, polymerizations, common reactions, and applications in organic synthesis.

CHEM554001  
Magnetic Resonance in Biology Jayasundera, Thusitha  
Spring 2022  
Innovations in the fields of biology and medicine over the last three decades have been rapid and immense. This course will focus on studying the applications of magnetic resonance to solve problems in chemistry, chemical biology, biochemistry, and biophysics. Hands-on experience with the complete NMR chemical shift assignments (backbone, side chain, distance) for the structure determination of proteins, and using NMR to probe the dynamics of protein-ligand binding interactions, will be the two central projects of the course. Time permitting, the role of electron paramagnetic resonance in biology will also be discussed.

CHEM556701  
Chemical Biology: Structure and Function Weerapana, Eranthie  
Spring 2022  
A major component of chemical biology is the application of chemical tools to the study of biological systems. This course will provide an overview of techniques such as genome sequencing, mass spectrometry-based proteomics, fluorescence imaging and unnatural amino-acid incorporation into proteins, with emphasis on examples drawn from the current literature. There will also be a focus on the mechanism of action of drugs, incorporating aspects of both the chemistry and biology of drug design.

CHEM777201  
Advanced Physical Chemistry/Electronics and Optics Waegele, Matthias  
Spring 2022

Students must contact the instructor for information about when and where the course will meet. In experimental physical chemistry, we use an assortment of instruments to perform various measurements. In this course, we will explore the basic principles of electronic circuits and optics. The aim of this course is to equip the participants with the necessary knowledge to solve practical problems that are often encountered in experimental physical chemistry research. The participants will develop a fundamental understanding of the operating principles of the most commonly used instruments in physical chemistry laboratories (potentiostat, chromatograph, mass spectrometer, FTIR spectrometer, laser, etc.). Further, the participants will develop a solid foundation of electronics, optics, and signal processing (theory and practice). An emphasis is placed on practical problem solving skills. To this end, the course is partitioned into theoretical and practical sessions. During the practical sessions, the students will experiment with electronic filters and oscilloscopes.

# Classical Studies

## Classical Studies Courses: Summer 2021

No records found

## Classical Studies Courses: Fall 2021

CLAS101001

Elementary Latin I Sutherland, Elizabeth H Fall 2021

This course will introduce the fundamentals of Latin grammar and vocabulary. The aim is to prepare students to read simple Latin prose.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None Prerequisites: None

Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both

Comments: None Status: Offered

CLAS101002

Elementary Latin I Thatcher, Mark R Fall 2021

This course will introduce the fundamentals of Latin grammar and vocabulary. The aim is to prepare students to read simple Latin prose.

Credits: 3

Room and Schedule: Stokes Hall 203S MWF 11:00AM-11:50AM Satisfies Core Requirement:

None

Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall

Student Level: Both Comments: None Status: Offered

CLAS101003

Elementary Latin I Sutherland, Elizabeth H Fall 2021

This course will introduce the fundamentals of Latin grammar and vocabulary. The aim is to prepare students to read simple Latin prose.

Credits: 3

Room and Schedule: Stokes Hall 401N MWF 10:00AM-10:50AM Satisfies Core Requirement:

None

Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student

Level: Both Comments: None Status: Offered

CLAS102001

Elementary Ancient Greek I Hoffman, Gail L

Fall 2021

This course will introduce the fundamentals of ancient Greek grammar and vocabulary. The aim is to prepare students to read something like Plato's Apology after a year of study.

Credits: 3

Room and Schedule: Stokes Hall 203S MWF 10:00AM-10:50AM Satisfies Core Requirement:

None

Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall

Student Level: Undergraduate

Comments: None Status: Offered

CLAS105201

Intermediate Ancient Greek I DEPT

Fall 2021

This course is a review of the essentials of Classical Attic grammar and a reading of selections from Greek literature, often Xenophon's Anabasis, Plato's Apology and/or Crito, or a play such as Euripides's Medea.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None Prerequisites: None

Corequisites: None Cross-listed with: None Frequency: Every Fall

Student Level: Undergraduate Comments: None

Status: Canceled

CLAS105201

Intermediate Ancient Greek I Eisenfeld, Hanne E

Fall 2021

This course is a review of the essentials of Classical Attic grammar and a reading of selections from Greek literature, often Xenophon's Anabasis, Plato's Apology and/or Crito, or a play such as Euripides's Medea.

Credits: 1

Room and Schedule: Stokes Hall 221S MWF 10:00AM-10:50AM Satisfies Core Requirement:

None

Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall

Student Level: Both Comments: None Status: Offered

CLAS105601

Intermediate Latin I Kakavas, Maria

Fall 2021

This course gives a thorough review of the essential grammatical forms presented in Elementary Latin along with a close reading of an introductory selection of Roman prose and poetry.

Credits: 3

Room and Schedule: Stokes Hall 113S MWF 10:00AM-10:50AM Satisfies Core Requirement:

CLAS220501

Greek History Thatcher, Mark R Fall 2021

A study of the history of Greece from the Bronze Age in the second millennium BCE to the preeminence of Alexander of Macedon in the 4th century. The course will focus on such broad topics as the development of Greek social and political institutions, notions of justice, freedom, and Greek identity, relations among Greek city-states and with foreign nations, imperialism, the golden age of Greek literature, and the rise of Macedonian monarchy. Emphasis will be on the study of the ancient sources: literary, historiographic, archaeological, and epigraphic.

CLAS221601

Art and Archaeology of Homer and Troy Hoffman, Gail L

Fall 2021

Homer's Iliad describes a "Trojan War." Until Schliemann's excavations of a fortified site in Turkey suggested a real Troy and further work in Greece revealed a brilliant Bronze Age civilization, most thought Homer's story pure fiction. This class investigates archaeological sites such as Troy and Mycenae, Bronze Age shipwrecks, a Late Bronze Age "Pompeii," and the artistic evidence for objects and practices described by Homer in order to separate historical truth from elements either invented by the poet or adopted from his own time and reinvented by Hollywood.

CLAS223001

Classical Mythology Eisenfeld, Hanne E Fall 2021

This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does.

What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

CLAS226201

The City of Rome Polt, Christopher B

Fall 2021

What was a normal day like for ancient Romans? What did they see, hear, and do while going about their lives? How did those things change as Rome shifted from a Republic to an Empire and as their city became caput mundi ("Head of the World")? In this course we will reconstruct the lived experiences of Romans by examining Rome's urban spaces through art, architecture, artifacts, and texts. Along the way, we will explore: public buildings, mundane and monumental; recreation (baths, theaters, arenas); civic infrastructure (aqueducts, sewers, roads); economy and commerce (shopping, harbors, slavery); gender and sexuality (domestic spaces, brothels); religion (temples, sacrifices, funerals); and other topics as appropriate.

CLAS228501

The Chorus, Ancient and Modern: Forms of Communal Performance and the Body Politic

Sapsford, Thomas

Fall 2021

This course investigates a particular form of cultural institution developed in ancient Greece, the chorus. It begins by exploring how the ancient chorus both praised and questioned the political systems that facilitated it before considering how choral performance in the modern period has been an effective tool for propaganda, revolt, and riot. Alongside works by ancient Greek poets, students look at a range of modern performance genres such as opera, ballet, sporting ceremonies, Broadway musicals, and flash mobs. Students also gain experience of communal performance themselves through participation in a series of practical movement and singing workshops.

CLAS330201

Greek Rhetoric Thatcher, Mark R Fall 2021

The class will explore the theory and practice of classical Greek rhetoric. From Homer onward, persuasive speech occupied a central place in Greek political and cultural life, and Greeks were the first western theorists of how and why verbal persuasion works. We will read works by early Greek orators Gorgias, Antiphon, and Lysias in Greek, along with ancient discussions of rhetorical composition and critiques of rhetoric in English. We will focus on the construction and contexts of Greek oratory and on the social-historical issues illuminated by the speeches themselves.

CLAS335801

Petronius' Satyricon Sapsford, Thomas Fall 2021

A Roman novel in fragments bawdy, self-conscious, deeply intertextual, vivid yet fantastical the Satyricon tells the adventures of Encolpius, who with his band of drifters, grifters, and heartbreakers wanders the ancient Mediterranean world facing a series of comic adversities. The Satyricon not only features lavish banquets, mystery religions, and tales of witches and

werewolves but also provides rich detail about the diversity of life during the age of the emperor Nero. As we read Petronius labyrinthine narrative in Latin, students will explore the themes of enslavement, pleasure, and punishment; they will also encounter colloquial Latin, work with textual fragments, and question the ways in which Latin texts comment upon and engage with their predecessors.

Greeks and Barbarians Thatcher, Mark R Spring 2022

In "Greeks and Barbarians," we'll use a combination of written sources, archaeological evidence, and even visual art to investigate the fascinating history of relationships and conflicts between Greeks, Persians, Egyptians, Carthaginians, and more. We'll read a variety of literature in English, such as the histories of Herodotus and Xenophon, the tragedies of Aeschylus and Euripides, and more, to help us figure out what Greeks really thought about barbarians - and about themselves.

#### CLAS220801

Art and Myth in Ancient Greece Hoffman, Gail L

Spring 2022

An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

#### CLAS222501

Ancient Medicine Eshleman, Kendra J Spring 2022

This course introduces students to the practice and theory of medicine in ancient Greece and Rome, from the archaic world of Homer (eighth century BCE) to late antiquity and early Christian healing practices. Themes will include shifting understandings of health and the body, revolutions in knowledge of human anatomy and physiology, ethical controversies over human and animal dissection, influential theories of pathology, psychology, pharmacology, and nutrition, the intersection of medicine and religion, and ancient ideas about doctors' responsibility, which, via the Hippocratic Oath, are still with us today. Students interested in history and literature will gain a richer sense of the importance of medicine in ancient society, and its connections to religion, magic and philosophy. Students from a medical and scientific background will discover how perceptions of the body have changed over time and from culture to culture.

Sex, Power, Gods: Ancient Wisdom Literature Eisenfeld, Hanne E

Spring 2022

Being a human in the world comes with a lot of questions: Why is love so distracting? What is the correct use of power? How can we live together in communities? Why is there suffering? In this course we will consider perspectives on these questions and more from around the ancient Mediterranean preserved in Mesopotamian and Egyptian advice texts, biblical books like Ecclesiastes and Job, Greek epic poetry, and Roman proverbs. We will also consider where we might find modern parallels to this ancient wisdom literature and how we might effectively communicate our own wisdom.

#### CLAS229401

Greco-Roman Egypt DEPT

Spring 2022

Under rule by the Ptolemaic dynasty, Egypt became the cultural hub of the ancient Mediterranean; when governed by Rome, it provided natural resources to a vast empire. But what of its multiethnic and multilingual population (the indigenous Egyptians, Nubians, Jews, Romans, Greeks, Arabs who inhabited it) and how did Egypt in this period relate to the rest of Africa and neighboring ancient civilizations? By studying literary, documentary, and visual sources, we will examine several fascinating historical figures such as Alexander the Great, Ptolemy Philadelphus, and perhaps the most notorious woman in antiquity, Cleopatra VII. Students will also encounter first-hand evidence of daily life in this region through letters, contracts, petitions, and arrest warrants recorded on potsherds and papyri and preserved for millennia by the desert sands.

#### CLAS333801

Cicero and Sallust: Catiline Eshleman, Kendra J

Spring 2022

The failed conspiracy of Catiline occupies a pivotal point in the dissolution of the Roman republic. Falling between the civil wars of Sulla (88-81 BCE) and Caesar (49-46 BCE), Catilines uprising (63 BCE) is part of the long aftermath of the former and representative of (and contributing to) the social and political breakdown that led to the latter. It is also one of the best attested episodes from the late Republic, the subject of four Ciceronian speeches (and mentioned in many of his other works) and a monograph by the historian Sallust. In this advanced Latin class, we will read Sallust's *Bellum Catilinae* and Cicero's *First Catilinarian* in Latin, and the rest of Cicero's *Catilinarian orations* in English. Topics will include the place of this episode in the political history of the late Republic, its representation by Cicero and Sallust, and the broader historiographic issues it raises. Graduate students will read in addition select letters of Cicero.

#### CLAS336001

Martial & Juvenal Sapsford, Thomas D Spring 2022

Rome in the first and second centuries CE was the ultimate performance arena, where one could view games, gladiators, mimes, and dancers; it was also a city whose inhabitants were themselves required to perform on a daily basis. Through reading the biting, bawdy, and blistering epigrams of Martial and satires of Juvenal in Latin, students will explore the various venues for social performance in imperial Rome (such as the *salutatio*, the baths, the dinner party) and how [not] to behave at them. In addition, we will use these poems to explore the enactment of various identity categories status, gender, sex, ethnicity, and ability which contributed to the diversity of life in early imperial Rome.

#### CLAS338801

Sophokles' *Philoktetes*: Frauds, Friends, and the Fall of Troy Eisenfeld, Hanne E

Spring 2022

ADVANCED GREEK COURSE: must have completed Intermediate Greek II or equivalent. Only the bow of Herakles can conquer Troy. Philoktetes sick, isolated, and disillusioned - has it; Odysseus will do anything to get it. Set against the backdrop of the Trojan War, Sophokles pushes its audiences to weigh individual suffering against collective success and to ask how far ends can justify means. We will read the play in the original Greek, with an emphasis on its depictions of trickery, trust, friendship, enmity and the blurred lines between these categories. Throughout the term we will also consider how mythical material is adapted to address contemporary questions, starting with Sophokles own reinterpretations of famous Trojan war heroes and moving outward to modern interpreters including Seamus Heaney and Michael Ondaatje.

COMM106001  
Anti-Social Media Hartnett, Kristin A Fall 2021  
Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

COMM190201  
Digital Storytelling Reynolds, Paul A Fall 2021  
Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and, moreover, civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved through examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet. This is a one-credit pass/fail course.

Black Popular Culture Kizito, Kalemba Fall 2021  
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media

studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

Sports, Media, Culture Serazio, Michael J Fall 2021  
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM220201  
New Ways of Seeing: Museum Art in Visual Culture Breen, Marcus J Fall 2021  
This course offers students a way to develop critical knowledge and skills in intersecting areas of concern to communication scholarship and research. These areas are: communication and media theory, visual culture, art museum practice, video production and distribution. Students will read and discuss two key texts, using them as a basis for interrogating art theory and practice at BC's McMullen Art Museum. While developing their knowledge of media and communication theory, students will have the opportunity to explore how new media, social media (especially visual/video tools) offers opportunities to explore and elaborate on new ways of seeing art and its role in society. This is a one credit course.

COMM220301  
Image as Communication Livon-Grosman, Ernesto Fall 2021  
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. The goal of this course is to study how images are formed while exploring the ways in which they are being used to communicate. Following the critical tradition that treats images as a static representation all the way to recent studies that focus on writing with images in the era of interactive media, we will read critical texts while exploring concrete examples taken from books, political posters, films, and social media. What is the relation between text and image? What are the politics of image making? How do images change through different national and cultural settings? And how does the materiality of images define the way we make sense of them? From Walter Benjamin, John Berger, Malcolm Turvey to Noigandres and Laura Mulvey to Harun Farocki we will try to answer some of these questions while looking at concrete examples. We will watch and analyze multimedia productions, read texts, and discuss visual representations from a variety of visual and textual sources. Class and readings in English, audiovisual materials in English and/or with English subtitles.

#### COMM220901

Asian American Media Tran, Anthony D  
Fall 2021

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course examines the dynamic roles of Asians and Asian Americans in media and pop culture, past and present. By exploring their representations and involvement in areas such as Hollywood, television, independent documentaries, stand-up comedy, music, and online media, we can better understand the complex experiences and critical issues related to Asian diasporas. This course will include short writing assignments and exams.

#### COMM221201

Fascist Rhetoric and Representation Ingram, Brett D  
Fall 2021

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course will interrogate the rhetoric and aesthetics of fascism as a system of governmentality and as a mentality, both of which are characterized by a desire for dictatorial control, the forcible suppression of opposing positions and perspectives, and a preoccupation with rigidly defined hierarchies of power and privilege. We will survey the origins of fascism in the 20th century Europe, as embodied in political leaders such as Mussolini, Hitler, and Stalin, with particular focus on the ways in fascist ideology was disseminated and absorbed through the production and consumption of popular culture. We will then turn to contemporary manifestations of neo-fascism, including the recent rise of ethno-nationalist groups in America

#### COMM222101

Digital Media Field Production Howley, Richard J  
Fall 2021

Satisfies one of three electives required for the Communication major. With the ubiquitous nature of video streaming on desktops, mobile phones and tablets, the influence of video storytelling has never been greater or more pervasive and the demand for skilled digital storytellers to fill those increasingly ubiquitous screens is stronger than ever. This course offers professional guidance and hands-on experience to develop the skills, techniques and disciplines necessary for the creation of digital media produced in the field. Students will write and produce their own video programs, becoming familiar with all aspects of production and post-production, including producing, performing, directing, single-camera shooting, sound recording, and location lighting, as well as editing, digital effects, and graphics. In the process, students will develop a discerning eye for what makes an effective, professional, aesthetically pleasing video production, while they build a portfolio that can be used during job or graduate program interviews.

#### COMM222201

Studio Television Production Reynolds, Paul A  
Fall 2021

Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "live-on-tape" production methods.

#### COMM222401

The Ideal of the Open Mind Meyvis, Nathan  
Fall 2021

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In an age of polarized politics, it is immensely difficult to keep an open mind in public debate. Convinced that our side is right and the other wrong, we readily retreat to our respective corners, rally our allies, and prepare to outvote or shout down our opponents. But insofar as we remain committed to democratic deliberation, we must try to understand our fellow citizens and make the attempt to persuade them. To bring our fellow citizens around to our way of seeing things, we have to first understand where they're coming from, which means keeping an open mind. In this course, we will address the meaning of the open mind as it bears upon political rhetoric and communication, moral debate, and the study of culture. Questions we will address include: is political rhetoric invariably a form of manipulation and deceit, or is it a way of persuading people by appealing to them from within their own perspectives? Can tradition be a source for reform? To what extent have the most radical reforms in American history drawn upon tradition versus left tradition behind? To address these questions, we will examine and assess the ideal of the open mind as it has emerged in the Western philosophical tradition from Plato and Aristotle to the present.

Theory, History and Practice of Talk Media Citorik, Christopher

Fall 2021

Satisfies one of three elective courses required within the Communication major.. Satisfies one of three elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early U.S. radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

Communicating Nonverbal Messages Duggan, Ashley P

Fall 2021

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course will explore different aspects of nonverbal communication (body language, facial expression, physical appearance, etc.) and the many ways in which they impact our lives. Class activities and discussions will be applicable directly to relationships with friends, family, and romantic partners. By the time you complete this course you will have acquired a resource-base to understand why and how nonverbal signals are used to communicate, to understand the role of theory related to nonverbal communication, and to improve your ability to apply these principles to your day-to-day interpersonal relationships and work settings.

Communication Methods: Critical/Cultural Erol, Ali E

Fall 2021

One of COMM3330 or COMM3340 is required for the Communication major.. This course is designed to introduce students to historical, critical, and cultural methods in Communication research. Among the topics emphasized are: (1) development of theses and arguments, (2) critical/cultural data collection methods (e.g., archival research and locating texts), and (3) data analysis and interpretation (e.g., critical discourse analysis and textual analysis). The objective of the course is to provide students with the resources to interpret, evaluate, and conduct research in Communication from a critical/cultural perspective.

#### COMM336201

Film Theory and Criticism Pastel, Renee L

Fall 2021

Satisfies the required theory course in the Communication major This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

#### COMM337801

Critical Theory

Livon-Grosman, Ernesto Fall 2021

Satisfies the required theory course in the Communication major. This course investigates and critiques the many ways that social, cultural, and political power is consolidated, negotiated, or resisted through popular media. We will read an assortment of theoretical approaches and primary texts (including those drawing from Marxist, ritual, semiotic, psychoanalytic, and functionalist traditions, among others) and apply them to ideological norms in society surrounding gender, race, class, violence, and the body. Looking at both the structural constraints in the production process of advertising, television, film, and social media, and the interpretive agency of audiences, our targets for analysis will be wide-ranging and contemporary.

Critical News Studies Sears, Anne  
Fall 2021

Satisfies one of two writing intensive courses required within the Communication major.

Restricted to Juniors and Seniors.. What is news? We will examine the deceptively simple question, paying attention to historical shifts in news organizations, journalistic practice and process, technological forms and sociocultural patterns. We will dissect visual and textual features of news, consider how events become newsworthy, analyze journalistic work routines, identify framing devices, public agendas, editorial power and audience relationships. Topics include climate change, immigration, mass violence and representation. Studying how news works and model of how it can be made differently gives us a guide for navigating news in our personal and professional lives.

Islam, Media and Popular Culture Peterson, Kristin M  
Fall 2021

Satisfies one of two writing intensive courses required within the Communication major.

Restricted to Juniors and Seniors. Western media have long portrayed Muslims through one-dimensional, negative stereotypes: the angry and irrational male terrorist or the covered and oppressed female victim. This writing intensive course will examine the roots of these stereotypes and discuss this process of racializing Muslims as the other in order to bolster the dominance of Western countries and imperialist projects like the War on Terror. In response to these persistent stereotypes, the course will focus on how Muslims engage with popular culture spaces to represent their own multi-faceted experiences, such as films, music, TV shows, comedy, art projects, fashion, comics, podcasts, tweets, blogs and digital videos. Through discussions of these numerous media examples, students will also examine how the religious identity of Muslims intersects with gender, sexuality, ethnicity and race.

COMM105001  
Translating Theory to Practice Ingram, Brett D  
Spring 2022

This is a one-credit Pass/Fall course. As a Communication student at Boston College you have been, and will continue to be, provided with numerous opportunities to learn about communication at both theoretical and practical levels in multiple areas within our discipline (e.g., media, rhetoric, culture, gender, health, interpersonal, family). The objective of this course is to assist in you in discerning how your education in the field of communication will prepare you to ask and eventually answer questions about your life, vocation, and role in the lives of others. Each week, a Communication department faculty member or guest speaker from the professional world will address a topic relevant to students on the precipice of entering the workforce, including (but not limited to): how to discuss academic research in language that resonates with employers in fields such as public advocacy, broadcasting, advertising, public relations, and consulting; whether/how to pursue graduate study; and how to present yourself in job applications and interviews.

COMM106001  
Anti-Social Media Hartnett, Kristin A Spring 2022

Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

COMM106301

Media Generations Sienkiewicz, Matthew S Spring 2022

What defines a generation? Do all Baby Boomers have something in common? Is it fair to talk about "Millennials" or "Zoomers" as collectives? And what role do media and culture play in distinguishing one generation from another? This one-credit seminar will take on these questions, giving students the opportunity to learn about theories of generation and to consider how media systems and cultural forms encourage generational divides. Analyzing popular culture from the novel Generation X to the latest TikTok trends, the class will think deeply about the perils and possibilities of thinking about modern society in generational terms. \*\*\*This is a one credit, pass/fail course\*\*\*

Digital Storytelling Reynolds, Paul A Spring 2022

Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and, moreover, civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved

through examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet. This is a one-credit pass/fail course.

Masculinity, Sexuality, and Difference Ingram, Brett D

Spring 2022

Satisfies Critical Issues Course requirement for the class of 2021 and beyond. This course will examine constructions of masculinity and sexuality in Western society from a critical cultural perspective. We will consider the ways in which cultural narratives about acceptable masculine behaviors and attitudes catalyze social conflicts, reinforce established power hierarchies, and organize the modes of being available to people of different gender identities and sexual orientations. We will also evaluate the liberatory potential of emergent discourses and practices that seek to cultivate greater acceptance of diversity, and promote social healing. There will be a concentrated focus on popular cultural forms (especially television, film, music, sports, and social media) that are particularly influential to contemporary men and boys.

Gender, Identity, and Sexuality Erol, Ali E

Spring 2022

Satisfies one of three elective courses required within the Communication major This course offers an introduction to the field queer media studies, focusing on several key genres, directors, and themes within transnational queer media cultures and scholarship. Well explore what makes a particular film or television program "queer" and what role media production, distribution, exhibition, and reception play in the process. Well examine constructions of sexuality, gender, race, and nation in a variety of texts and contexts, and investigate how transnational queer media can both participate in and resist dominant notions of sexuality, imperialism, race, gender, politics, and community.

Sports, Media, Culture Kim, Kyoung-yim Spring 2022

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or

problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

Studio Television Production Howley, Richard J

Spring 2022

Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "live-on-tape" production methods.

Communicating Politics Fennimore, Jillian Spring 2022

This course takes both a theoretical and practical approach to the art of political communication. Taught by an instructor with extensive field experience, the class surveys major historical trends in campaign advertising, policy messaging, and media relations. It then considers the modern world of political communication, offering an up-to-the-minute assessment of major trends in the field. Students have the opportunity to develop their own skills and portfolios by creating original political advertisements, social media campaigns, policy speeches, and more. The course features a number of notable guest speakers, including active politicians, candidates, and campaign managers.

COMM224301  
Mobilizing for Mobile Media Storytelling World Reynolds, Paul A  
Spring 2022

Satisfies one of three elective courses required within the Communication major. With the advent of the iPhone in 2007, and Android mobile devices shortly thereafter, came the smartphone media revolution. Once the domain of high cost production studios and controlled distribution through a handful of television networks, digital storytelling is now in the hands of the average citizen. Today, nearly three billion smartphones offer extraordinary access to digital media creation and post production tools, as well as instant content distribution across increasingly faster, global networks. With this kind of once unimaginable access to media creation and distribution comes an urgency to understand this tsunami of digitally crafted and often manipulated communications. In this course, we will examine the various applications and impact of this new world of networked, media-rich, mobile devices, while getting hands-on experience actually crafting digital stories with little more than smartphones for video acquisition. While the cost of smartphone production can be virtually free, to create effective short form digital videos still requires some fundamental skills. To that end, students will learn how to plan, direct, shoot, and edit their own smartphone productions from how-to videos to short commercials, as well as advocacy spots, and political issues and candidate videos.

Media Ethics in the Digital Age Peterson, Kristin M  
Spring 2022

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. \*\*\* Students that have taken COMM2250 Mass Communication Ethics may not take this course\*\*\*This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

COMM228301  
Asian Americans in Sport and Society  
Kim, Kyoung-yim Spring 2022

In the mid-twentieth century, sport was a bastion of white supremacy, and it embodied such U.S national bodily ideals as white, heterosexual, Christian, muscular, and male. Histories of racial exclusion, racist violence, gendered policing, and sexual regulations positioned African-American men as outside the normative abilities of white men. In this respect, sport was a microcosm of the racial nation, with the language of citizenship and racial resistance coded within black-white discourse; however, this dichotomy failed to account for the long histories of Asian Americans in the United States. Asian-American sporting cultures trouble the current racial synchronicity between sport and nation while illuminating multiple performances of

"belonging." This course highlights the diversity of Asian-American communities and aims to decipher how the ordinary practices of sporting cultures can offer extraordinary knowledge about U.S. society.

Spring 2022

One of COMM3330 or COMM3340 is required for the Communication major.. This course is designed to introduce students to social scientific methods in Communication research.

Among the topics emphasized are: (1) development of questions and hypotheses, (2) quantitative and/or qualitative data collection methods (e.g., experiments, interviews, and surveys), and (3) data analysis and interpretation (e.g., interpretive and statistical analysis). The objective of the course is to provide students with the resources to interpret, evaluate, and conduct research in Communication from a social science perspective.

COMM333501

Communication Methods: Honors Erol, Ali E  
Spring 2022

Open to students in departmental honors. This course is an honors introduction to research methods used in communication research. Students will learn how to ethically conduct research; develop a working knowledge of the IRB and associated requirements; learn the process of creating a compelling research question/hypothesis; acquire the skills necessary to gather and analyze data; and write initial scholarship regarding their potential thesis project. Overall, this course will create a strong foundation for students who will conduct their own research. Students will demonstrate their understanding of the material as well as their ability to apply the material through exams, a research project, an oral presentation, and daily participation.

COMM336801

Theories of Culture and Identity Kizito, Kalemba  
Spring 2022

Difference is a fact of the human condition. What do we learn about ourselves and Others in relational encounters marked by difference? Differences can divide communities, societies, countries and perpetuate violence and suffering. Yet, if faced with courage, integrity, and inquiry, these same differences can lead to authentic connections that benefit individuals and their societies. Effective communication requires study and practice, intense intellectual focus, and genuine emotional exploration. \*\*Satisfies the required theory course in the Communication major\*\*

Globalization and the Media DEPT

Spring 2022

Satisfies one of two writing intensive courses required within the Communication major.

Restricted to Juniors and Seniors.. This class examines the cultural impact of globalization on the traditional centers and peripheries of media production. The course will cover topics such as the shifting definitions of cultural imperialism; the role of the United Nations in regulating cultural products; the latest transnational media mergers; the strategies of global television programmers such as CNN, MTV, or Discovery; the increasing commercialization of media systems around the world; and the role of media in relation to war and terrorism. This writing-intensive seminar is open to juniors and seniors.

#### COMM444301

Seeing God and Hearing Ghosts: Spirituality in US Media Peterson, Kristin M

Spring 2022

Satisfies one of two writing intensive courses required within the Communication major.

Restricted to Juniors and Seniors.. This writing intensive course will explore the intimate connections between the development of media technologies and the emergence of religious movements in the U.S. Emphasizing the unique relationship of religion and media in American public life, this course will focus on how the disestablishment of religion creates a competitive marketplace in which religions engage with new media technologies to make meaning, maintain community connections, and reach new members. Students will examine how the development of new media technologies presents both opportunities and challenges to various religious groups in the U.S. Cases to be discussed in the class include: how access to mass printing technologies enables publications and sacred texts from emerging religious groups like the Church of Jesus Christ of Latter-Day Saints, the Nation of Islam, and the Jehovah's Witnesses; how radio waves and photography influenced the popularity of spiritualism after the Civil War; how cable networks provided the opportunity for Evangelical Christians to ascend to the center of American public life; or how social media create space for young Muslim Americans to express their faith in contrast to mainstream media stereotypes.

From Word to Image: In Search of the Essay Film

Livon-Grosman, Ernesto Spring 2022

This course will look at the essay film from the 1950s to the present. Through the history of the essay as a genre and its cinematic life, we will examine those films that bring together text and image as well as the private and the public. During this writing-intensive course, we will follow the thread that connects all the elements of the essay as a genre. We will discuss essays by Montaigne, Theodor Adorno, Timothy Corrigan, and Norah Alter and the films of iconic filmmakers such as Chris Marker, Nicolasi to Guillin Landrin, Albertina Carri, Harun Farocki, and Agnes Varda, among others. How are those films shaped by constantly changing social circumstances? What do they tell us about the social and political conditions in which they were made? And how do they relate to other film practices around the world? In addition to

the critical readings, the students will watch movies outside class time. Films in multiple languages always with English subtitles. \*\*\* Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors\*\*

COMM447101

Children and the Media Hogan, Lindsay R Spring 2022

Satisfies one of two writing intensive courses required within the Communication major.

Restricted to Juniors and Seniors.. From film to television to mobile apps, this course examines children's media as an economic, cultural, and political entity and explores the relationships among young people and the contemporary media environment. Students will analyze various scholarly approaches and major debates in the study of children and media while also learning the larger historical contexts of those debates. This course offers a critical/cultural approach that examines the ways in which media industries, institutions, technologies, and texts intersect to produce particular media practices and considers how such practices relate to the production of cultural norms or social power.

Health/Illness in Relationships Duggan, Ashley P

Spring 2022

Satisfies one of two required writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This class integrates communication theories and applications in the contexts of healthcare conversations and decisions, and with organizational and social systems. We consider conversations with health providers, family members, and close friends navigating illness. We address the complexities of communication within broader healthcare structures and the distribution of resources to promote health and address illness. We address disparities in access and communication about quality healthcare such that advances in science, technology, and medicine are unequally distributed. This course considers disparities in substantive ways that require us to consider how relationships are tied to resources, to values, and to larger economic motives. We address communication processes as we unpack each of the complexities in health and illness in relationships.

# Computer Science

## Computer Science Courses: Summer 2021

CSCI110202  
Computer Science II DEPT  
Summer 2021

In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

CSCI335602  
Software Engineering DEPT  
Summer 2021

This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

Fall 2021  
Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

CSCI110201

Computer Science II Bolotin, Naomi

Fall 2021

In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

Credits: 3

CSCI222701

Introduction to Scientific Computation Alvarez, Sergio

Fall 2021

This is an introductory course in computer programming for students interested in numerical and scientific computation. Emphasis will be placed on problems drawn from the sciences. Many mathematical models of the behavior of complex natural systems have no closed-form solution, and computational modeling is needed for data exploration and to obtain approximate solutions. The course discusses different models and approximation methods, how to implement them as computer programs, and the factors that influence approximation quality.

Topics include computer representation of floating-point numbers and data, computer program design and control flow, data visualization, nonlinear equations, systems of linear equations and least-squares, and Fourier analysis, with additional topics as time allows.

Students will write programs in the Python programming language, primarily.

Credits: 3

Room and Schedule: Fulton Hall 415 TuTh 09:00AM-10:15AM Satisfies Core Requirement: None

Prerequisites: MATH1101 or equivalent course(s) in differential and integral calculus with functions of one real variable.

CSCI224401  
Randomness and Computation Straubing, Howard  
Fall 2021  
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of randomness allows us to efficiently generate the very large prime numbers needed for information security, and to understand the long-term behavior of random sequences used to rank web search results. Multidimensional random variables provide useful models for data mining, computer vision, social networks, and machine learning. Topics include combinatorics and counting, random experiments and probability, computational modeling of randomness, random variables and distributions, Bayes rule, collective behavior of random phenomena, vectors and matrices, and Markov chains. Each topic is illustrated with applications of its use.  
Credits: 3

CSCI226701  
Technology and Culture Griffith, William  
Fall 2021  
This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI227101  
Computer Systems Aviram, Amitai F Fall 2021  
The goal of this course is to help you become a better programmer by teaching you the basic concepts underlying all computer systems. We want you to learn what really happens when your programs run, so that when things go wrong (as they always do) you will have the intellectual tools to solve the problem. In most of computer science, we're pushed to make abstractions and stay within their frameworks. But abstractions often ignore effects that can become critical.  
CSCI2271 introduce greater detail about system behavior and operation. This greater detail is needed for optimizing program performance, for working within the finite memory and word size constraints of computers, and for systems-level programming. Programming will be completed in the language C with comparisons to Java.  
Credits: 3

Computer Organization and Lab Biswas, Anjum  
Fall 2021  
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

CSCI331101  
Visualization Kim, Nam Wook Fall 2021  
Data can capture a snapshot of the world and allow us to understand ourselves and our communities better. With ever-increasing amounts of data, the ability to understand and communicate data is becoming essential for everyone. Visualization leverages our visual perception to provide a powerful yet accessible way to make sense of large and complex data. It has been widely adopted across disciplines, from science and engineering to business and journalism, to combat the overabundance of information in our society. In this course, students will learn to acquire foundational knowledge about how to design effective visualizations for analysis and presentation based on theories and principles from graphic design, perceptual psychology, and cognitive science. Students will also learn practical skills about how to rapidly explore and communicate data using Tableau and build interactive visualization products (e.g., articles, tools, and systems) using web-based frameworks including D3.js and Vega-Lite.

CSCI334001  
Introduction to Machine Learning with Applications to Chemistry Tristan, Jean-Baptiste  
Fall 2021  
In this hands-on course, we will study the fundamental methods in machine learning to solve problems in science, and more specifically chemistry. We will first learn about the basic models and algorithms in machine learning and cover more advanced methods such as neural networks and Gaussian processes. We will apply these methods to chemistry problems such as learning the potential energy surface of a molecule, optimizing the geometry of a molecule, discovering the transition structure of a chemical reaction, or estimating the macroscopic properties of chemical reactions. The course will involve a significant amount of programming using the Python language. To the extent possible, mathematics will be kept to a minimum, but a solid understanding of calculus is necessary. Some familiarity with basic linear algebra and probability is preferable.

CSCI334301  
Computer Vision Wei, Donglai  
Fall 2021  
Computers are gaining abilities to "see" things just like our vision system. Face recognition has been embedded in almost all the digital cameras. Car detection and tracking have been used in self-driving vehicles. Modern search engines are not only able to find similar text patterns but also able to search for similar objects in huge image database. This course is to introduce principles and computational methods of obtaining information from images and videos. Topics include image processing, shape analysis, image matching, segmentation, 3D projective geometry, object tracking, human pose and action, image retrieval, and object recognition.

CSCI339401  
Topics in Computer Systems Tseng, Lewis  
Fall 2021  
Secure and fault-tolerant computing. As the world becomes increasingly connected and driven by computing, failures of large-scale systems and malicious attacks have tremendous impact. This course is aimed to introduce the students to the security issues in real-world systems and the principles of fault-tolerant system design. For example, the course will discuss the techniques (signatures, PoW, hash function, etc.), issues (privacy leak, 51% attack), and applications of Blockchain in detail. The course will provide a quick introduction to the fundamental concepts as well as real-world issues and open questions. Although the course is intended to be self-contained, some background in distributed systems, and/or networking will be helpful. Students should be familiar with computer systems, ready to learn a new language Go, and prepared to write a lot of code. After taking the course, you are expected to: have knowledge of the principles of fault-tolerant and secure system design; be able to explain real-world security issues; and grasp deep knowledge on one of the chosen project topics.

Topics in Parallel Computing Bento Ayres Pereira, Jose Fall 2021  
Everyone should know how to think "Parallel." Even a laptop or cellphone has multiple CPU cores at our disposal these days. In this hands-on, project oriented class you will learn the

main ideas of parallel computing with GPU. Our focus will be on the CUDA programming language.

You will learn about GPU architectures, about parallel algorithms, CUDA libraries and GPU computing applications. The prerequisite for this class are C programming language, multivariate calculus, linear algebra and algorithms and randomness and computation. If you do not have all of these prerequisites and want to take the class, please talk with me. There is a limited number of spots available.

## Computer Science Courses: Spring 2022

CSCI110101

Computer Science I Griffith, William Spring 2022

Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

Credits: 3

Room and Schedule: 245 Beacon Street Room 102 MW 03:00PM-04:15PM Satisfies Core Requirement: Mathematics

Prerequisites: None Corequisites: None Cross-listed with: None

Frequency: Every Summer Student Level: Undergraduate Comments: None

Status: Offered

CSCI110102

Computer Science I Tristan, Jean-Baptiste Spring 2022

Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

Credits: 3

#### CSCI110201

Computer Science II Aviram, Amitai F Spring 2022

In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

Credits: 3

CSCI224401  
Randomness and Computation McTague, Carl S  
Spring 2022  
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of randomness allows us to efficiently generate the very large prime numbers needed for information security, and to understand the long-term behavior of random sequences used to rank web search results. Multidimensional random variables provide useful models for data mining, computer vision, social networks, and machine learning. Topics include combinatorics and counting, random experiments and probability, computational modeling of randomness, random variables and distributions, Bayes rule, collective behavior of random phenomena, vectors and matrices, and Markov chains. Each topic is illustrated with applications of its use.

Database Systems and Applications Wyner, George M  
Spring 2022  
This course is required for Information Systems concentrators class of 2023 and earlier. It is being replaced by ISYS3350 for class of 2024 and later. This course provides in-depth coverage of database systems and their uses. Topics include database architecture, design strategies, SQL queries, security, performance, and using database tools and scripting languages to create sophisticated forms and applications, including web applications. The goal of the course is to give students the knowledge and skills to use databases effectively in any business situation.

CSCI226701  
Technology and Culture Griffith, William  
Spring 2022  
This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI227101  
Computer Systems Aviram, Amitai F Spring 2022  
The goal of this course is to help you become a better programmer by teaching you the basic concepts underlying all computer systems. We want you to learn what really happens when your programs run, so that when things go wrong (as they always do) you will have the intellectual tools to solve the problem. In most of computer science, we're pushed to make abstractions and stay within their frameworks. But abstractions often ignore effects that can become critical.  
CSCI2271 introduce greater detail about system behavior and operation. This greater detail is needed for optimizing program performance, for working within the finite memory and word size constraints of computers, and for systems-level programming. Programming will be completed in the language C with comparisons to Java.  
Credits: 3

#### CSCI227201

Computer Organization and Lab Biswas, Anjum

Spring 2022

This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

Spring 2022

This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

#### CSCI229101

An Introduction to Data Science Alvarez, Sergio  
Spring 2022

This course provides an introduction to concepts and techniques of computational data modeling and inference that can inform rational decision-making based on data. Topics include data preprocessing, exploratory data analysis and visualization, elements of probability and statistical inference, and predictive and descriptive modeling, with an introduction to machine learning concepts and approaches as time allows. Programming in Python will be required.

Prospective students should also be comfortable with mathematical notation and reasoning at the college calculus level.

Credits: 3

Room and Schedule: Integrated Science Building 125 TuTh 09:00AM-10:15AM Satisfies Core Requirement: None

Prerequisites: CSCI1101 or equivalent introduction to CS with programming, and one of MATH 1101 / 1103/ 1105 or an equivalent calculus course.

Corequisites: None Cross-listed with: None

Frequency: Every Spring Student Level: Undergraduate Comments: None

Status: Offered

#### CSCI334701

Robotics Biswas, Anjum Spring 2022

This course will introduce the basic principles of mobile robotics history, theory, hardware and control. Topics will include robot components, effectors and actuators, locomotion, sensors, feedback control, control architectures, representation, localization and navigation. This is a project-oriented course and the students will have hands-on experience with a real mobile robot. The students will be required to complete several individual programming assignments and a team design project.

Credits: 3

Room and Schedule: Integrated Science Building 103 MWF 11:00AM-11:50AM Satisfies Core Requirement: None

Prerequisites: CSCI1102 or Prerequisite is CS 2 and Computer organization course.

Corequisites: None

Cross-listed with: None Frequency: Biannually in the Spring Student Level: Undergraduate

Status: Offered

#### CSCI335601

Software Engineering Marques Samary, Maira R Spring 2022

This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

Credits: 3

Room and Schedule: Integrated Science Building 229 TuTh 10:30AM-11:45AM Satisfies Core Requirement: None

Prerequisites: CSCI1102 Corequisites: None Cross-listed with: None Frequency: Every Spring Student Level: Undergraduate Comments: None

#### CSCI336201

Operating Systems Ubal Tena, Rafael Spring 2022

This course covers the fundamentals of operating systems (OS) design both from a theoretical and a practical perspective. The course is organized in two parts, each involving a separate course project. The first part deals with the system call interface between applications and the OS, the multi-process abstraction of a computing system, and task scheduling algorithms. The associated project involves the implementation of a custom Unix command-line interpreter (shell). The second part of the course covers memory management, multi-threading libraries, and file systems. A real implementation of these features is studied on a miniature, open-source operating system called xv6. The associated project involves an extension of xv6 to support custom features, such as new scheduling policies, kernel-level threads, or file system recovery.

#### CSCI336601

Principles of Programming Languages Tassarotti, Joseph D  
Spring 2022

Starting with a simple language of expressions, the course develops a sequence of progressively more expressive programming languages keeping in mind the conflicting constraints between the expressiveness of the language and the requirement that it be reliably and efficiently implemented. The course focuses on these essential concepts and the run-time behavior of programs. Type systems play an essential role. By understanding the concepts the student will be able to evaluate the advantages and disadvantages of a language for a given application.

#### CSCI338301

Algorithms Su, Hsin Hao Spring 2022

This course is a study of algorithms for, among other things, sorting, searching, pattern matching, and manipulation of graphs and trees. Emphasis is placed on the mathematical analysis of the time and memory requirements of such algorithms and on general techniques for improving their performance.

Credits: 3

Room and Schedule: Integrated Science Building 102 TuTh 04:30PM-05:45PM Satisfies Core Requirement: None

Prerequisites: CSCI2243 and CSCI1102 and CSCI2244 Corequisites: None

#### CSCI338401

Computability and Computational Complexity Straubing, Howard  
Spring 2022

This is a course in the theoretical foundations of computer science, centered around the theme of fundamental limits on computation. Topics include: Turing Machines, universal computation, undecidability of the halting problem, solvable and unsolvable algorithmic problems, recursive functions, Goedel's Incompleteness Theorem, time- and space-bounded computations, Cook's Theorem, NP-complete problems, problems solvable in polynomial space, randomized computation, application to cryptography, practical approaches to computationally intractable problems (such as SAT solvers), quantum computing, and Shor's Theorem.

Credits: 3

Room and Schedule: Integrated Science Building 125 TuTh 01:30PM-02:45PM Satisfies Core Requirement: None

Prerequisites: CSCI1101 Computer Science 1, or equivalent, and CSCI2243 Logic and Computation, or MATH2216 Introduction to Abstract Mathematics.

Frequency: Every Fall, Periodically in the Spring Student Level: Undergraduate

Comments: None Status: Offered

#### CSCI339701

Topics in Machine Intelligence: Biomedical Image Analysis Wei, Donglai  
Spring 2022

This course presents both the traditional and the cutting-edge deep-learning-based image processing algorithms with particular emphasis on problems in biomedical research. It covers image acquisition, visualization, filtering, enhancement, registration, classification, segmentation and detection. The course goal is to provide hands-on coding experience for motivated undergraduates and first year PSYC/BIO graduate students in a wide range of image modalities with various popular computational tools. Besides lectures, it has weekly labs in python using Colab and one final project.

Credits: 3

Room and Schedule: Integrated Science Building 205 TuTh 12:00 Noon-01:15PM Satisfies Core Requirement: None

## Cornerstone Courses: Summer 2021

No records found

## Cornerstone Courses: Fall 2021

UNCS220101

Courage to Know Bracher, Elizabeth R Fall 2021

This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year.. This course offers an introduction to college life.

The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Status: Offered

UNCS220101  
Courage to Know Hincks, Martha M Spring 2022

This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year.. This course offers an introduction to college life.

The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Credits: 3

## Earth and Environmental Sciences Courses: Fall 2021

EESC111001

Geology of National Parks Becker, Richard

Fall 2021

U.S. National Parks give us the perfect opportunity to explore and discuss fundamental geological concepts. How was the Grand Canyon carved out by a river? How are volcanoes in Hawaii different from those in Katmai National Park, and what do they tell us about plate tectonics? How did glaciers shape Acadia National Park? Which parks are most susceptible to earthquakes and why? While considering various National Parks, as well as some State Parks and/or parks in other countries, basic modern scientific methods in the earth sciences will be discussed and explored.

Exploring the Earth Kruckenber, Seth C Fall 2021

The Earth is a dynamic planet that our species is clearly changing. A great challenge of the twenty-first century is to maintain the Earth's ability to support its growing human population. This course discusses the origin and materials of the Earth and the processes by which it has evolved. It is a first course for Geological Sciences majors and also provides a background for departmental majors and minors. EESC1132 is appropriate as a natural science core course for students interested in the Earth Sciences. The laboratory consists of in-class exercises, analysis of rocks, and a weekend field trip.

Astronomy Kuchar, Thomas A Fall 2021

Astronomical observations and theories date back to the beginning of recorded history. The development of astronomy is closely tied to the growth of physics, mathematics, philosophy, and theology. Emphasis is on large-scale concepts and on how we know what we know about the stars, our galaxy, and the universe. The course covers these discoveries and ideas from the earliest days of astronomy to many of the recent, exciting advances.

Environmental Geosciences: Earth Processes and Risks Behn, Mark D

Fall 2021

This course may be taken independently of EESC1167. This course will explore the dynamic processes operating on and within the earth and how those processes can impact humans. We will explore the nature of natural disasters, including river and coastal flooding, volcanic eruptions, earthquakes, landslides, severe storms, climate changes, and bombardment by rare extraterrestrial objects. Emphasis will be placed on understanding the current science used to predict the occurrences of these disasters, how accurate those predictions are, and the associated mitigation practices.

EESC117001

Rivers and the Environment Snyder, Noah P

Fall 2021

Scientific understanding of rivers is vital to address many of today's environmental challenges. Rivers transport and distribute water, sediment, nutrients, and contaminants throughout the landscape. They provide habitat and migration pathways for countless aquatic species. Rivers supply fresh water, power generation, and recreational opportunities to much of the world's human populations. We will learn about the geological, hydrological, and biological processes that are important to rivers and watersheds, and how knowledge of these processes aids our ability to manage, protect, and restore these systems.

The Living Earth I Galli, Kenneth G Fall 2021

This core course provides a broad and modern presentation of the major topics and principles of Earth Science. The lectures will cover all the fundamental subjects of geology, with emphasis on earth materials such as minerals, rocks and internal and external Earth processes, with a brief overview of important aspects of Earth history. The labs will involve hands-on work studying minerals, igneous rocks, sedimentary rocks, metamorphic rocks, viscosity, weathering and running water, formation of ripples and sand dunes, plate tectonics, fossils, and earthquakes, in addition to a local field geology trip during lab time. Additional topics may be covered if time allows.

Crisis and Storytelling in the Age of Climate Change Palevsky, Hilary I;Song, Min;Wright, Robin Fall 2021

This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

Crisis and Storytelling in the Age of Climate Change DEPT

Fall 2021

This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. EESC332201  
Marine Conservation Science Ofen, Vena  
Fall 2021

This course explores the threats to marine diversity, and the ways in which we can preserve diversity. Covering principles from marine science, ecology and conservation biology, we ask what role does diversity play in marine ecosystems, and what are the consequences of diversity loss to ecosystem function and services. We investigate major threats to marine diversity including marine pollution, species invasion, commercial fishing, and climate change impacts.

Through review of the primary literature and guided discussions, students learn about conservation efforts at the local, national and international levels, with emphasis on marine protected areas and fisheries management.

Credits: 3

EESC335001

Alternative Energy Kroner, Jonathan S Fall 2021

Modern civilization relies upon energy to support nearly all aspects of social and economic activity. Historically, this energy has come from fossil fuels (coal, oil, and natural gas).

Important questions concerning the availability and societal and environmental impacts of these energy sources have contributed to an increasing interest in the development of alternative energy technologies (e.g., solar, wind, geothermal, biomass, tidal and wave).

Through an interdisciplinary lens, this course will explore the dynamics of the current energy transition with a particular focus on sustainable energy systems and alternative energy resources. Students will be introduced to quantitative, engineering methods for energy modeling and technology selection in the context of the economic, political, and environmental dimensions of both conventional and alternative energy resources.

EESC337801

Petrology Starr, Paul Fall 2021

This course is focused on learning the techniques of polarizing light microscopy (PLM) and on petrology and petrography of igneous and metamorphic rocks. Lectures on the petrology of how these rocks form and how they relate to the plate tectonic environments will be integrated with the laboratory. Phase diagrams will be used to help better understand the origin of igneous rocks whereas metamorphic facies reactions will be applied to understanding of progressive and retrograde metamorphic processes.

Glacial and Pleistocene Geology Becker, Richard

Fall 2021

This course will explore three topics: the physics of glaciers, the glacial deposits of the last ice age, and the history of the Pleistocene epoch. Students will learn how mass and energy fluxes govern the behavior of glaciers; how climate and the physical properties of ice govern the formation and evolution of glacial landscapes; and how we can infer Pleistocene paleoclimate and paleoglaciology from those landscapes. The course will include a field trip. A fundamental goal of the course will be providing students with a systematic understanding of how glacial landforms, glaciology, and climate co-vary across continental-scale landscapes.

Isotope Geochemistry and Geochronology Baxter, Ethan

Fall 2021

This course will introduce the various isotopic methods that are used in the Earth Sciences.

Topics will include: (1) radiogenic isotopes in geochronology and petrogenesis, including U-Th-Pb, K-Ar, Rb-Sr, and Sm-Nd, (2) light stable isotopes in geology, biogeochemistry, and paleothermometry, including C, H, O, N, and S, and (3) non-traditional stable isotopes in biogeochemistry, oceanography, and cosmochemistry including Fe, Mo, Cu, Ni, and Ca. We will emphasize the geochemical behavior, analytical methods, and specific applications of these isotope systems in geology.

Climate Change Debates Shakun, Jeremy D

Fall 2021

This advanced seminar seeks to provide an overview of the science of global change and a critical evaluation of the literature through a survey of current scientific debates. We will cover a wide range of issues from topics in radiative forcing, oceans, atmosphere, cryosphere, paleoclimate, biological feedbacks, and impacts. Students will be expected to read papers and lead discussions, write assessments of each climate debate, and prepare a final term paper evaluating the scientific consensus on climate change in the context of the debates we cover.

Senior Environmental Geoscience Research Seminar I Snyder, Noah P

Fall 2021

In this two-semester course sequence, students will be introduced to the process of conducting original scientific research. This includes exploring fundamentals of a natural system from reading the scientific literature, defining a problem, designing and executing an experiment, analysis, data interpretation, and presentation of results in written and oral formats. Students will work individually or in groups within a broader research project.

Topics and field areas will vary from year to year depending on existing projects and expertise of the instructor. The EESC5582-5583 sequence fulfills the senior research experience requirement for Environmental Geoscience majors.

## Earth and Environmental Sciences Courses: Spring 2022

EESC112501  
Exploring Earth History Becker, Richard Spring 2022  
"The earth is not finished, but is now being and will forever be remade." C.R. Van Hise (1898)  
The objective of this course is to describe the history of the earth and the development of life on Earth during the last 4.6 billion years, especially within North America. Major biological and physical events will be revealed by interpretation of the rock record. The use of animations and demonstrations will enhance your understanding of some major topics.

EESC114601  
Origin and Evolution of Life on Earth Strother, Paul K Spring 2022  
This course explores current theories about the origins of life, beginning with the original hypothesis of the Russian biochemist A.I. Oparin. Darwin's theory of evolution is emphasized, but many different components of the natural sciences touch upon this topic. The course lectures include the study of the oldest fossils, life in extreme habitats, cellular biology, prebiotic molecules, and the search for life on other planets.

EESC117401  
Climate Change and Society Shakun, Jeremy D  
Spring 2022

Global climate change may be one of the biggest issues facing humanity in the twenty-first century. We investigate the scientific basis for global warming forecasts from what is well known to what is deeply uncertain based on theory, models, and the geologic record of earth's climate history. We discuss the political, economic, and social dimensions surrounding the global warming debate, and explore the current and potential impacts of climate change on developed and developing societies. Connections to recent media will be emphasized to give students an up-to-date view on the state of our national conversation on climate change.

EESC117701  
Cosmos  
Kuchar, Thomas A Spring 2022

Open to all students.. There are more than a dozen interplanetary probes from numerous countries that are currently collecting data from several planetary bodies in the Solar System. These exploration missions are expanding knowledge of our Solar System, which is mostly built on only about half a century of space exploration. We will discuss these space missions and their scientific goals and results, which are increasingly oriented to answer questions on planetary evolution and the possibility of extraterrestrial biospheres. Throughout this course, the fundamentals of how science works will be emphasized. If weather permits, there might also be outdoor lectures for star-gazing opportunities.

Geoscience and Public Policy Kafka, Alan L  
Spring 2022

In this course, we will explore case studies that demonstrate the role of the earth sciences in addressing problems of public policy. For each case study, students will be introduced to the underlying scientific concepts relevant to the problem being addressed. After this scientific foundation is developed, we will discuss how it needs to be considered as part of the process of making policy decisions. The course will also introduce students to how scientists and public policy makers apply the concepts of probability and statistics in the decision making process.

Powering America: The Past and Future of Energy, Technology, and the Environment Ebel, John E  
Spring 2022

This course explores U.S. energy. From the perspectives of history, culture, technology, engineering, and foreign policy, we ask how we have created and distributed energy in the past, how energy systems function in the present, and how they may evolve. We investigate energy production, distribution, and use--coal, oil, nuclear power, hydropower, wind, and solar power-- along with cables, pipelines, and transmission systems. Through hands-on exercises and field trips, students learn how past technological and economic choices shaped current U.S. energy systems, how energy systems affect the environment, and how sustainable energy systems will be in the future.

Making the Modern World: Design, Ethics, and Engineering Krones, Jonathan S Spring 2022

Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters; balance financial, technological, and regulatory pressures associated with complex socio-technical problems; and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Students will collaborate on group design projects based on human-centered engineering. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this class students will explore the social, cultural, and institutional history of engineering; learn foundational skills in quantitative analysis of real- world engineering designs; and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world.

Agroecology: The Science of Sustainable Agriculture Pisani Gareau, Tara

Spring 2022

Conventional agriculture, while responsible for enormous increases in yield, has undermined the natural resources that support agricultural yield and ecosystem services. Yet there is a pressing need to maintain yield in the face of climate change. How can we meet the food needs of a growing human population without clearing more forests, polluting rivers and the atmosphere, overdrawing from aquifers, and threatening the existence of wild species? In this course we will learn how the principles of ecology can be applied to the design, management, and analysis of agroecosystems and agricultural landscapes with the goal of creating a sustainable food system.

Spring 2022

This course will apply the principles of chemistry to investigate the chemical compositions of the Earth system, including the atmosphere, hydrosphere, biosphere, and lithosphere. Topics will include the origin of elements in the solar system; distribution of elements in the core,

mantle, and crust; cycling of carbon, nitrogen, phosphorus, and other elements in the Earth's surface environments; radiometric dating techniques; and stable isotope geochemistry.

Credits: 3

Room and Schedule: Devlin Hall 215 TuTh 01:30PM-02:45PM Satisfies Core Requirement: None

Prerequisites: One semester of general chemistry or permission from the instructor

Corequisites: None

Cross-listed with: CHEM3320 Frequency: Periodically Student Level: Undergraduate

Comments: None

Status: Offered

EESC333001

Paleobiology Strother, Paul K Spring 2022

Paleobiology is the study of evolution based on Paleontology, the fossil record of life through geologic time. The course begins with the origins of life and early evolution during the Precambrian Eon, when all major domains of life were established. The rise of plants and animals, beginning about 500 million years ago, is followed by the study of macroevolution and patterns of evolution through time. Lecture emphasizes paleobiology and environmental evolution; laboratory provides direct observation of fossils including basic morphology and phylogeny. The class may include an extended weekend field trip to Nova Scotia to visit several fossil localities.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None

EESC446401

Environmental Data Exploration and Analysis Palevsky, Hilary I Spring 2022

Earth and environmental science increasingly depends on scientific programming to explore and analyze large datasets from in situ and autonomous observations, satellite remote sensing, and numerical model output. In this course, students will learn to use MATLAB to visualize earth system data across broad spatial and temporal scales in maps and time-series plots and apply statistical tools to analyze trends and variability in their datasets. Students will also learn to critically assess datasets and to select and justify appropriate data sources and analytical methods to address scientific questions about earth system processes. Students will practice these skills in a series of data analysis assignments focused on regional and global climate data and will apply them in a team-based final research project.

EESC523001

Stable Isotope Biogeochemistry Wang, Xingchen

Spring 2022

This course will examine the use of stable isotopes in biogeochemistry and environmental sciences. Topics will include terminology and basic principles of stable isotope geochemistry; instruments and technique; data processing in isotope ratio mass spectrometry; isotope effects in metabolisms and biosynthesis; and applications of stable isotopes in the cycling of carbon, nitrogen, sulfur, oxygen and other elements. Formats will include lectures, numerical modeling assignments; a few hands-on lab sessions; student presentations; and a final paper or research proposal.

Credits: 3

EESC669501  
Microtectonics DEPT  
Spring 2022  
Microtectonics deals with the interpretation of microstructures, small-scale deformation structures in rocks that yield abundant information on the history and type of deformation and metamorphism. This course will emphasize the microstructural, textural, and chemical analysis of deformed rocks to aid in the interpretation of tectonic evolution. Topics covered in this course will include: identification of rock microstructures, petrofabrics and textures; identification of deformation mechanisms at the grain- and crystal-lattice scale; secondary foliation and lineation development; the origin of lattice preferred orientation; porphyroblast growth; microgauges of temperature, pressure and differential stress; special techniques used to study deformation fabrics; and the association of these features with igneous and metamorphic assemblages and chemical trends to deduce geological histories and processes.  
Credits: 3  
Room and Schedule: None  
Satisfies Core Requirement: None  
Prerequisites: Preferred prerequisites: EESC3385 Structural Geology; EESC3378 Petrology; or permission of the instructor or Permission of Department

EESC669601  
Broader Impacts and Integrated Research Seminar Shakun, Jeremy D  
Spring 2022  
There is an increasing emphasis on how scientists and their research impact society. For example, grant proposals to the National Science Foundation must now include Broader Impact statements and explicit plans for how these sorts of activities will be accomplished. This seminar-format course explores the criteria for broader impacts and the ways in which student research can contribute to society and the achievement of desired societal outcomes. All graduate students are welcome, and Ph.D. students are required to take EESC66XXX, typically during their third year of graduate study post-bachelors.

EALC415101  
Readings in Chinese Literature and Philosophy Chiang, Sing-chen L  
Fall 2021  
Classes conducted in both modern Mandarin and English. Satisfies Foreign Language Proficiency core requirement. By way of readings in Chinese literary and philosophical canons, this course introduces students to the basic diction and grammar of classical Chinese. Classical Chinese is the Latin of East Asian written traditions, the gateway to the cultural and historical legacy of East Asia, and the foundation of modern literary Chinese. We will read and translate selected passages from Chinese classics, including the Analects of Confucius, Mencius, the Daodejing, and Zhuangzi. Class discussion will center on major philosophical concepts and their historical contexts.

Life, Liberty & Heath: The Economics, Policy and Law of Healthcare Chirba, Mary Ann;Regan, Tracy L  
Fall 2021  
This is a Complex Problems course and is open to Freshman only. Recently, health has become a central focus of political infighting, public discord, and personal worry. Heath care and health insurance now dominate everything from think tanks to Jimmy Kimmel Live! Meanwhile, concussions go up, NFL ratings go down, drug prices soar, and opioid abuse damages individuals, families, and the health care system, and the economy. Such complex issues are best understood through interdisciplinary study. These paired classes will introduce basic principles of economics, law, and public policy through the lens of contemporary problems involving enduring questions of government authority and individual autonomy, morality, and ethics, social justice, and human rights.

The State of Affordable Housing in the States Van Meter, Robert H  
Fall 2021  
Course offered for Sophomores only.. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Real Estate and Urban Action DEPT

Fall 2021

Real Estate and Urban Action is a class in which students explore the interdisciplinary fields that are engaged in neighborhood revitalization. The course uses the transformation of the failed Columbia Point housing project (Dorchester, MA) into Harbor Point, a successful mixed income neighborhood, as a core teaching case study, highlighting how successful redevelopment addresses the social and economic needs of community residents. Classes include guest lectures from developers, public planning officials, and supportive services experts on the social, cultural, and political factors critical to transforming distressed neighborhoods into safe and economically viable neighborhoods. It is a practical course,

in which students gain experience through field trips and interactions with real estate and supportive services professionals, culminating in a team neighborhood transformation proposal.

Credits: 3

Room and Schedule: None Satisfies Core Requirement: None

Prerequisites: The only prerequisite is an interest in any facet of real estate and urban action.

Given the multidisciplinary tasks required to create viable communities, students from all schools at Boston College are welcomed to participate.

ECON221101

Math for Economic Analysis Watson, Bruce D

Fall 2021

Assuming only high school algebra, the course develops all of the main mathematical tools used in modern economics. Students will learn the skills necessary to do well in subsequent economics courses, such as Micro Theory (ECON2201) and Macro Theory (ECON2202), as well as advanced electives, such as Game Theory in Economics (ECON3308) and Financial Economics (ECON3379). Those who have completed Multivariate Calculus (MATH2202) should not take this course. Beginning with applications of standard algebra to economics, the course looks at partial and general equilibrium and comparative statics. Topics subsequently explored include introductory linear algebra (matrices and vectors), and applications of univariate (single-variable) calculus to economics. Multivariate calculus is covered next, with applications to consumer theory and the theory of the firm. Finally, unconstrained and constrained optimization is covered, including techniques such as the Lagrange multiplier and Jacobian matrices. Applications and examples are drawn from practical problems in economics and business. Throughout the course, an emphasis is placed on combining intuition with rigor—the math is used to provide a more rigorous analysis of the intuitive understanding students acquired in their principles of economics courses.

Geographic Information Systems for Planning and Decision-Making Cohen, Will W

Fall 2021

Large quantities of information are available to describe our social and physical environment with high detail, but making sense of this data requires specialized skill sets. Geographic Information Systems (GIS) is a general approach to analysis and is a powerful set of tools for understanding complex problems or for making a compelling argument about issues grounded in the physical or social environment. It is widely used in the public and private sectors. This course will introduce students to the use of GIS and representation as a means of looking at and representing spatial data. Students will learn how to perform the three broad steps of spatial analysis: 1) collecting and organizing data, 2) analyzing this data for appropriate patterns, and 3) using software to represent data on maps to support decision making.

Economics of Health Policy DEPT

Fall 2021

This course builds on fundamental concepts from Principles to apply economic reasoning to health policy issues. We will develop some tools for thinking critically about health economics data, and then delve into the history and institutional details of health policy in the United States. The rest of the course is devoted to the economics behind a variety of health policy questions: how could policymakers use cost-effectiveness analysis when deciding whether to adopt new health care technology? How can the economics of externalities inform policies around vaccination? Why do we give patents to pharmaceutical companies when we know that monopolies create deadweight loss? Why do economists oppose the tax deduction for employer-sponsored health insurance plans? How did Obamacare's individual health insurance mandate affect insurance markets, and what should we expect now that the mandate has been repealed? How can information asymmetries result in low-quality health care? Why does the United States spend so much more than other countries on health care, and what do we gain from that additional spending?

ECON224201

Public Policy in an Aging Society Rutledge, Matthew S

Fall 2021

We live in a rapidly aging nation. In two decades, the age distribution of the U.S. will look like that of Florida today. We will analyze the underlying demographic trends, the economic status of the aged, the fiscal challenge of an aging society, public policies (especially social insurance) designed to assist older Americans, the impact of public policy on individual behavior, and proposals for reform.

ECON227701

Environmental Economics and Policy Sweeney, Richard L

Fall 2021

This course provides an introduction to the economics of environmental policy. We begin by examining market failures from externalities and public goods. We then discuss public policy options to correct these failures, and develop tools to assess the costs and benefits of each approach. With this framework in place, the remainder of the course is spent evaluating past efforts to conserve land and improve air and water quality, before concluding with an extensive discussion about global climate change policy.

Market Design Yenmez, Mehmet B Fall 2021

Cap at 18. This is an advanced course on market design. The course aims to provide students with theoretical concepts of matching and allocation problems. The focus of the course is both introducing students to market-design theory as well as exploring real-life applications such as on-campus housing, school choice, kidney exchange, search engine auctions, and spectrum auctions. Some knowledge of statistics, especially order statistics, and calculus is required for the theoretical part. Students will be required to write a final paper and do an in-class presentation.

Game Theory in Economics Sharunova, Vera  
Fall 2021

This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

#### ECON331701

Economies of Inequality Sanzenbacher, Geoffrey T Fall 2021

The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start. Prerequisites: micro theory and econometrics.

Money and Financial Markets Kazemi, Hossein S  
Fall 2021

This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Prerequisites: macro theory and econometrics

Advertising and Media Markets: Advanced Research Methods Mortimer, Julie H  
Fall 2021

Extensive research project.. This course develops advanced research methods to study the advertising and media markets. The goal of the course is to provide hands-on experience with advanced research methods, including the ability to analyze and critique previous research and to identify important research questions. The course is designed primarily for junior economics majors who are interested in writing a senior thesis, or for junior and senior economics majors anticipating quantitative work in economics or marketing after graduation. Methods that are taught include theoretical tools from industrial organization, such as game theoretic models of imperfect competition, pricing, and entry, as well as statistical and empirical methods of analysis using data on advertising and media programming choices. Questions addressed in the course include the following: What is the impact of advertising on product markets? How do advertisers compete for air time, both across and within industries?

ECON336101  
Monetary Theory and Policy Kazemi, Hossein S  
Fall 2021  
This course is an analysis of how the operation and behavior of financial markets are influenced by monetary policy, the actions taken by the Federal Reserve to promote full employment, price stability, and moderate long-term interest rates. Emphasis is placed on studying the interaction between financial intermediaries (e.g., commercial banks, investment banks, mutual funds, hedge funds, etc.) and a nation's central bank. Students are introduced to the modern theories of the demand for and supply of money, as well as their implications for economic activity, the cost of living, employment, and the conduct of monetary policy. Particular emphasis is given to recent Fed policy, including Quantitative Easing and Quantitative Tightening and the impact of these policies on asset prices and long-term interest rates. Furthermore, through an extensive use of Bloomberg in this class students learn how to analyze the impact of these and other Fed policies on the U.S. economy and financial markets to provide a window into how modern practitioners in the discipline follow and respond to changes in U.S. monetary policy.  
Prerequisites: macro theory and econometrics.

Introduction to Computational Investing Law, Tzuoh H  
Fall 2021  
Mandatory two-hour lab required with course, which meets W 7-9 PM. Fall 2020\*\*\*THIS COURSE IS OFFERED ONLINE\*\*\*In this course, students develop skills to automate an investment strategy. The first third of the course covers programming skills (Python), market structure, and portfolio evaluation. The second third covers optimization and commonly used strategies. In the final third, we cross-evaluate student projects and discuss theory behind applications. Students work on a group project after the first third of the course. By the end of the course, successful students are able to write and evaluate fully functional programs on an online trading platform. This is not a course that promotes quantitative investing. It is an immersion to acquire the universally useful skills required to automate investments. The lab session is mandatory. Course offered in the fall only. Sophomores and juniors are highly encouraged to take this course. If the course is full, simply show up in class and the instructor will sort things out. There are no formal requirements.

ECON338901

Machine Learning for Economics Arlashin, Anatoly S  
Fall 2021

One of the defining features of the world around us today is the ever-increasing amount of data that describe our daily lives. This "big data" phenomenon, as it became known, has led to developing of new methods, called "machine learning," that allow high-dimensional statistical analysis in ways that were either impossible or infeasible for classical statistical methods, such as regression analysis. The goal of this course is to provide students with an introduction to machine learning in a framework way that makes it applicable to causal economic analysis. While we will cover the necessary theoretical foundations, the emphasis will be placed on application and learning how and when to use these new methods, and what are their pros and cons compared to classical methods of statistical analysis.

ECON339001

Applied Health Economics DEPT

Fall 2021

A perennial health policy debate concerns the proper role of government in the allocation of health care. The first fundamental theorem of welfare economics states that (under certain assumptions) markets result in efficient allocations, so one might expect most economists favor minimal government involvement in allocating health care. We will begin by studying economic theories about why health care markets may be inefficient, along with the empirical evidence regarding those theories. As the course progresses, our emphasis will shift: in groups, students will use publicly-available data to write and present a research paper investigating a policy- relevant health economics question. Prerequisites: micro theory and econometrics.

ECON772001

Math for Economists Ireland, Peter N

Fall 2021

"Economics studies the efficient allocation of scarce resources." It follows almost immediately from this definition that while verbal and graphical analyses are often helpful too, economists derive their sharpest and most powerful results by setting up and solving constrained (because resources are "scarce") optimization (because allocations should be "efficient") problems.

Hence, this course introduces first-year graduate students to variety of techniques for doing just that: setting up and solving constrained optimization problems. Specific methods covered include those based on the Kuhn-Tucker and envelope theorems, the maximum principle, and dynamic programming. Note that since this is a "math for economists course", its emphasis is not so much on stating and proving theorems but on developing an intuitive understanding of how and why each method works and determining when one particular approach may be easier or more convenient than all others to apply to a specific problem.

ECON775001  
Macroeconomic Theory I Schiantarelli, Fabio  
Fall 2021  
The course covers the standard models of exogenous and endogenous growth, mostly in a deterministic setting: The Solow-Swan model without and with human capital, the Ramsey growth model with infinitely lived optimizing agents, overlapping generation models without and with altruism, fiscal policy, models with human capital, basic AK models of endogenous growth, two sector models of endogenous growth, product variety models and Schumpeterian growth models. We will also review some crucial empirical papers on applied growth, starting from those on the fundamental causes of growth. In the last part of the course we cover the Ramsey model in discrete time with a stochastic technology shock and the choice of investment with adjustment costs and consumption in a stochastic setting.

Industrial Organization I Mortimer, Julie H  
Fall 2021  
In this course, we study imperfect competition among firms, emphasizing empirical work. We learn how to implement empirical methods commonly used in Industrial Organization (IO), and how to read, and ultimately write, papers in empirical IO. Topics covered include demand estimation, entry, auctions, bundling, vertical control and contractual arrangements, retailing and inventories, U.S. merger policy, health markets, and others as time allows. Each topic is organized around recent empirical work. Throughout, we consider the importance of identification in empirical studies.

Principles of Economics Sokolov, Denis

Spring 2022

This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems.

Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

ECON220601  
Real Estate and Urban Action McCullagh, Neil P  
Spring 2022  
Real Estate and Urban Action is a class in which students explore the interdisciplinary fields that are engaged in neighborhood revitalization. The course uses the transformation of the failed Columbia Point housing project (Dorchester, MA) into Harbor Point, a successful mixed income neighborhood, as a core teaching case study, highlighting how successful redevelopment addresses the social and economic needs of community residents. Classes include guest lectures from developers, public planning officials, and supportive services experts on the social, cultural, and political factors critical to transforming distressed neighborhoods into safe and economically viable neighborhoods. It is a practical course, in which students gain experience through field trips and interactions with real estate and supportive services professionals, culminating in a team neighborhood transformation proposal.  
Credits: 3  
Room and Schedule: Stokes Hall 1955 W 03:00PM-05:20PM Satisfies Core Requirement: None  
Prerequisites: The only prerequisite is an interest in any facet of real estate and urban action. Given the multidisciplinary tasks required to create viable communities, students from all schools at Boston College are welcomed to participate.

ECON220801  
Economic Justice Piderit, John Spring 2022  
The normal focus of economics is on efficiency in the development and use of scarce resources as well as the determination of rewards paid to factors of production such as labor and capital. In some economics courses attention is given to a country's distribution of income, although usually without any economic or philosophical justification for what constitutes a fair

distribution of income. This course identifies guiding principles that are rooted in a vibrant Judeo-Christian tradition stemming from the Old and New Testament. These principles constitute the foundation for general norms that help identify components of the common good of a society and that guide the distribution of goods among individual nation states, between generations, and between people of one century with people of future centuries. They also suggest how to balance rewards for people or firms that develop new products, and they yield broad boundaries within which economies should function to protect the environment. Finally, any just society requires much more than free markets and a system of law and governance. The course proposes an ethical code for workers in free-market societies, a code based on making sure that all people have reasonable economic resources to pursue basic human goods in their personal and community lives.

ECON221101  
Math for Economic Analysis Watson, Bruce D  
Spring 2022  
Assuming only high school algebra, the course develops all of the main mathematical tools used in modern economics. Students will learn the skills necessary to do well in subsequent economics courses, such as Micro Theory (ECON2201) and Macro Theory (ECON2202), as well as advanced electives, such as Game Theory in Economics (ECON3308) and Financial Economics (ECON3379). Those who have completed Multivariate Calculus (MATH2202) should not take this course. Beginning with applications of standard algebra to economics, the course looks at partial and general equilibrium and comparative statics. Topics subsequently explored include introductory linear algebra (matrices and vectors), and applications of univariate (single- variable) calculus to economics. Multivariate calculus is covered next, with applications to consumer theory and the theory of the firm. Finally, unconstrained and constrained optimization is covered, including techniques such as the Lagrange multiplier and Jacobian matrices. Applications and examples are drawn from practical problems in economics and business. Throughout the course, an emphasis is placed on combining intuition with rigor--the math is used to provide a more rigorous analysis of the intuitive understanding students acquired in their principles of economics courses.

#### ECON221201

Geographic Information Systems for Planning and Decision-Making Cohen, Will W

Spring 2022

Large quantities of information are available to describe our social and physical environment with high detail, but making sense of this data requires specialized skill sets. Geographic Information Systems (GIS) is a general approach to analysis and is a powerful set of tools for understanding complex problems or for making a compelling argument about issues grounded in the physical or social environment. It is widely used in the public and private sectors. This course will introduce students to the use of GIS and representation as a means of looking at and representing spatial data. Students will learn how to perform the three broad steps of spatial analysis: 1) collecting and organizing data, 2) analyzing this data for appropriate patterns, and 3) using software to represent data on maps to support decision making.

Financial Forecasting Mc Gowan, Richard Spring 2022  
The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specifics model to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

ECON330101  
Topics in Macroeconomic Forecasting DEPT  
Spring 2022  
Forecasting is a very important activity. Economists forecast the macroeconomy and these forecasts provide information that will help the economy to thrive. Business firms must also forecast the macroeconomy. All of the problems covered in this course can be set-up as special cases of a state-space model. This course is devoted to forecasting the macroeconomy. Topics that will be covered in this course are: single equation ARMA processes; linear algebra, Vector autoregressions (VARs); state-space models; using state-space models to forecast the economy when the state variables are observed; errors-in-variables; dynamic factor models; using state- space models when the state variables are unobserved, that is using dynamic factor models; dynamic factor models applied to several different macroeconomic models from the literature.

Market Design Yenez, Mehmet B Spring 2022  
Cap at 18. This is an advanced course on market design. The course aims to provide students with theoretical concepts of matching and allocation problems. The focus of the course is both introducing students to market-design theory as well as exploring real-life applications such as on-campus housing, school choice, kidney exchange, search engine auctions, and spectrum auctions. Some knowledge of statistics, especially order statistics, and calculus is required for the theoretical part. Students will be required to write a final paper and do an in-class presentation.

ECON330801  
Game Theory in Economics Sonmez, Tayfun O  
Spring 2022  
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

ECON331201  
Evolutionary Economics Cox, Donald  
Spring 2022  
This course uses evolutionary biology to better understand the psychology of preferences, a central concept in economics. Why are people risk averse? Impatient? What explains novelty seeking, habits, addictions? What makes parents provide for children? We will use evolutionary thinking to explore these and a host of other diverse topics: violence, adolescent risk taking, sexual behavior, mating preferences, marriage and divorce, rearing and investing in children, extended families, trade and specialization, cooperation and conflict, cults and gangs, religion, and interactions between genetic and cultural forces. This course has an intensive research and writing requirement and enrollment is limited. You should be comfortable using Stata.

ECON331701  
Economies of Inequality Sanzenbacher, Geoffrey T Spring 2022  
The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start. Prerequisites: micro theory and econometrics.

ECON332401  
Money and Financial Markets Kazemi, Hossein S  
Spring 2022  
This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets.

ECON332501  
Contest Theory Simeonov, Dimitar A  
Spring 2022  
Many economic, political, and social environments can be described as contests in which competing agents have the opportunity to expend scarce resources--such as effort, money, time, or troops--in order to affect the probabilities of winning prizes. Examples range from the

competition for patents and promotions within firms, to the process of litigation or lobbying politicians, to elections, sports competitions, and global conflicts. Such environments have been analyzed using Tullock contests, all-pay auctions, and rank-order tournaments. The course will cover both theoretical models and experimental papers testing predictions from the models.

ECON332601

Experimental Economics Coffman, Lucas

Spring 2022

This course is for anyone who wants to be able to answer questions using experiments. This course is an introduction to experimental methods, particularly those developed by economists. We will discuss in detail all of the steps of an experiment, from design, measurement and randomization, to cost and power analyses. This is strictly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods, not a foundation of famous experimental results. Nonetheless, we will cover experiments in a variety of interesting fields: behavioral economics, economics of developing countries, discrimination, labor economics, cognitive and social psychology, and more. There are two main value-adds from this course. First, you will be equipped to design and run an experiment to answer important questions. Second, in understanding what the optimal experimental design should look like, you will be armed with better lenses through which to view naturally existing data.

ECON336101

Monetary Theory and Policy Kazemi, Hossein V

Spring 2022

This course is an analysis of how the operation and behavior of financial markets are influenced by monetary policy, the actions taken by the Federal Reserve to promote full employment, price stability, and moderate long-term interest rates. Emphasis is placed on studying the interaction between financial intermediaries (e.g., commercial banks, investment

banks, mutual funds, hedge funds, etc.) and a nation's central bank. Students are introduced to the modern theories of the demand for and supply of money, as well as their implications for economic activity, the cost of living, employment, and the conduct of monetary policy. Particular emphasis is given to recent Fed policy, including Quantitative Easing and Quantitative Tightening and the impact of these policies on asset prices and long-term interest rates. Furthermore, through an extensive use of Bloomberg in this class students learn how to analyze the impact of these and other Fed policies on the U.S. economy and financial markets to provide a window into how modern practitioners in the discipline follow and respond to changes in U.S. monetary policy.

Prerequisites: macro theory and econometrics.

Topics in Econometrics Maxwell, C C

Spring 2022

This is an advanced econometrics/data analytics course and extends ECON2228. Selected topics include linear and non-linear least squares estimation as well as maximum likelihood estimation, including logit/probit, ordered logit/probit and poisson/negative binomial count regression models. A term-long research project is an important part of the course and will entail in-class presentations as well as a submission at the end of the semester. The analytics in the course will be Stata-based, but students in doing their own work, should feel free to work in R, SAS, Python, or whatever their statistical language of choice might be. Examples and datasets are drawn entirely from the sports world. Limited enrollment.

ECON337101

International Trade McHugh, Christopher Spring 2022

Not open to students who have taken ECON2271 This course is an analysis of the foundations of trade and the principle of comparative advantage leading to a sophisticated study of

protectionism. Current U.S. protectionist issues will be illuminated, as well as economic warfare, control of international factor movements, and interaction of trade and economic development.

#### ECON337201

International Finance Valchev, Rosen Z Spring 2022

Not open to students who have taken ECON2271 or ECON3376 International financial markets, international trade and balance of payments issues will be studied by using analytical models of the open economy. Topics of particular interests are exchange rate determination, capital flows, trade flows, and other international linkages between economies. The course will apply the analytical tools of international economics to address macroeconomic aspects of current policy issues such as the global impact of the financial crisis, exchange rate policy, sovereign debt crises, and persistent trade deficits and international indebtedness.

#### ECON337501

From Stone Tools to Robots: Economic Growth and Development Guerron, Pablo A Spring 2022

This class explores economic growth over the past millennia. For most of its history, humanity did not experience the type and quality of life, as we know it today (e.g., electricity, running water, medicine, telecommunications, and transport). It is only during the second half of the 18th century when Europe (and later U.S.) started to see economic growth. This growth started with the Industrial Revolution. In the first part of the course, we will study models that explain why economic growth is such a recent phenomenon. We will rely on models such as those proposed by Malthus to understand why the world did not grow at all for most of 5 millennia. We will also explore models that help us to understand the explosive economic growth experienced by the U.S. in the 19th and 20th centuries (and other countries more recently). As a by-product, there will be some discussion on the recent slowdown affecting most Western economies (the so-called Secular Stagnation). Importantly, we will talk about the increasingly reliance on automation for production in the so-called 4th Industrial Revolution. That is, the impact automation may have on employment, welfare, and society. For example, we will explore how automation is contributing to inequality. A crucial part of the course is to understand how research and development (R&D) and innovation contribute to growth. Therefore, the second part of the course will be devoted to study R&D at the aggregate (macro) level but also at the industry level. We will use case studies in, for example, the pharmaceutical sector to study why R&D is such a crucial factor for growth but also difficult to implement and predict its impact on firms and ultimately on the economy. We will study the current development of vaccines and treatments for Covid-19. In addition, we also analyze the role of automation and big data (data mining, and machine learning) in R&D. As will become clear, programming is a vital skill in the 4th Industrial Revolution. To prepare students for this shifting labor landscape, students will learn Python to manipulate data and solve models. An example of this is to compute productivity using data from national accounts for different countries.

Financial Economics Ireland, Peter N Spring 2022

This undergraduate elective focuses on financial economics, with specific emphasis on asset pricing and the valuation of risky cash flows. After developing and studying the details of consumer decision-making under uncertainty, it uses that general framework as a basis for understanding both equilibrium and no-arbitrage theories of securities pricing, including traditional models like the capital asset pricing model (CAPM), newer Arrow-Debreu theories, and, if time permits, arbitrage pricing theory (APT), the consumption capital asset pricing model (CCAPM), and martingale pricing methods.

Machine Learning for Economics Evren, Haydar E Spring 2022

One of the defining features of the world around us today is the ever-increasing amount of data that describe our daily lives. This "big data" phenomenon, as it became known, has led to developing of new methods, called "machine learning," that allow high-dimensional statistical analysis in ways that were either impossible or infeasible for classical statistical methods, such as regression analysis. The goal of this course is to provide students with an introduction to machine learning in a framework way that makes it applicable to causal economic analysis. While we will cover the necessary theoretical foundations, the emphasis will be placed on application and learning how and when to use these new methods, and what are their pros and cons compared to classical methods of statistical analysis.

ECON339101  
Economics of Energy and the Environment Sweeney, Richard L  
Spring 2022

This course provides an overview of recent research in energy and environmental economics, with an emphasis on connecting policy questions of interest to available data and econometric methods. In the context of specific markets, we will first review the theoretical justifications for government intervention. We will then turn to the empirical evidence to see what recent economic scholarship has to say about a variety of energy policy questions, including: Should we ban fracking? Do oil pipelines reduce property values? What is the best way to promote renewable energy? Should we be more energy efficient? Students will be required to read and discuss academic articles each week, as well as write an empirical term paper.

ECON885601  
Experimental Economics Coffman, Lucas Spring 2022  
This class is an introduction to experimental methods in economics. We will cover all the steps of an experiment from design, measurement, and randomization to practical considerations like cost and power analyses. This is mainly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods (e.g., lab, field, and online studies, experiments in developing countries, interventions in organizations, and so on). The course is not intended to provide a foundation of famous experimental results overall or for any one topic. The take-away of the course is to develop the ability to design a confound-free experiment regardless of question or context.

Innovation through Design Thinking Rutirasiri, Chokdee R

Fall 2021

Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

Innovation through Design Thinking DEPT

Fall 2021

Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

Physical Modeling and Analysis Lab Govindasamy, Siddharta

Fall 2021

In this course, students will learn and apply concepts from physics and calculus to model, analyze, and experiment on physical systems through a combination of instructional and laboratory sessions. Example systems to be modeled and analyzed in the class will feature linear and rotational motion, thermal conduction, and simple circuit elements. Students completing this course will be able to abstract a variety of physical systems into forms suitable for analysis and predict the behavior of these systems using analytical tools.

First-Year Human-Centered Engineering Reflection 1 Gaudette, Glenn R

Fall 2021

Students will engage in weekly reflection sessions designed to integrate experiences in the HCE classroom with broader questions about the relationship between engineering, design, and society. Drawing on a variety of reflection practices, students will consider the role of engineering knowledge in complex sociotechnical systems, what it means to do human-centered engineering for the common good, the moral and ethical dimensions of engineering practice, and their own formation as students and individuals.

Topics in Computer Science: Digital Signal Processing Tassarotti, Joseph D

Fall 2021

From mobile telephones, to fitness monitors, medical imaging devices, environmental sensors and more, systems that process digital signals are ubiquitous in the modern world. In this course, students will learn the fundamental concepts in digital signal processing such as filtering, Fourier Transforms, and time-frequency analysis. Applications in audio and biomedical signal processing will be used extensively. The course will culminate in a project where students will get to further their understanding of the fundamental concepts in areas such as image processing, communications, and biomedical signal processing.

ENGR110101  
Introduction to Human-Centered Engineering Hira, Avneet  
Spring 2022  
In this course, we will learn about and practice engineering methods to tackle design problems through a human-centered lens. These methods include introductory work with: mathematical models, statistics, physical prototyping, computer-aided design, decision-making approaches, and observation and interview techniques. We will learn how these methods can be employed while working on a design problem, including problem formulation, data analysis, design trade-offs, concept selection, and design deployment. At the end of this course, we will have a working understanding of how human-centered engineers think and work.

## English Courses: Fall 2021

ENGL100901

First Year Writing Seminar/English Language Learners Imre, Kristin

Fall 2021

Limited to 15. Students place into the course after taking a writing assessment. Satisfies Core requirement for: Writing. Designed for students whose first language is not English, this course

aims to develop the writing skills necessary for success at Boston College. Students will gain practice in the writing of academic essays, focusing on a range of English rhetorical styles from

narrative to research. The composition process from brainstorming, drafting, revision, and editing will be considered. Grammar is taught in the context of student-generated writing. This

course may be taken in place of ENGL1010, First Year Writing Seminar, and fulfills the Writing Core requirement. Students place into this course based on the English placement exam taken

in late August.

Credits: 3

Room and Schedule: Gasson Hall 201 TuTh 10:30AM-11:45AM Satisfies Core Requirement:

ENGL101001

First Year Writing Seminar Lewis, Paul  
Fall 2021

Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL108001

Literature Core Dougherty, Daniel Fall 2021

In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: [www.bc.edu/literaturecore](http://www.bc.edu/literaturecore)

ENGL109301

An Introduction to Modern Irish I Cahill, Sean R;Songer, Kristen A Fall 2021

This course continues in second semester as ENGL1094 This course offers beginners an enjoyable introduction to the language and culture of Ireland. We'll learn how to speak basic Irish Gaelic, including talking in the present tense about who you are, where you live, your family, your daily life, and things you like to do. We will learn songs from the rich sean-nos (old-style) singing tradition. This course counts towards your Irish Studies minor, and one towards your English major. In the spring semester, you can build on what you've gained and, if you wish, satisfy the Morrissey College of Arts and Sciences language proficiency requirement by completing the four-course cycle the following year.

ENGL111001

First Year Writing Seminar: From Slavery to Mass Incarceration DeRosa, Marla C Fall 2021

Formerly Titled: First Year Writing Seminar: Power, Race and Inequality in the Criminal Justice System. This section of the First-Year Writing Seminar is centered around a book called *Just Mercy* by Bryan Stevenson. The book focuses on Stevenson's work with the criminal justice system and the organization he founded called the Equal Justice Initiative. The book raises questions about power, race, equality, justice, and the common good within the U.S. legal system for which there are no easy answers. Students will identify one of these issues/questions from the book and delve more deeply into that question. Students will start with an oral history/interview of a person who can shed light on their question from a personal or professional perspective. They will then review the academic research literature on the question and research what the media says about the issue. Finally, students will write and present (to a non-academic audience) an informed argument of their own about how to address issues of power and inequality.

ENGL118401

Lit Core: Literature, Testimony, Justice Brooks, John A Fall 2021

This section of Literature Core will explore how literary texts bear witness to historical events and address social issues. Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's *Benito Cereno*, *Narrative of the Life of Frederick Douglass*, *Toni Morrison's Beloved*, *Art Spiegelman's Maus*, *Tommy Orange's There There*, and *The Laramie Project*.

ENGL118501

Lit Core: The Danger of the Single Story: Reading Identity, Migration and Culture Graver, Elizabeth Fall 2021

We will read fiction and nonfiction by writers who have emigrated to the US as children or young adults, along with texts that explore the refugee experience and probe the relationship between language(s) and identity. We will encounter recurrent themes around diaspora, exile, choice, national and transnational identities, as well as what Chimamanda Ngozi Adichie calls the danger of the single story. Students will perform literary analysis through informal and formal writing assignments, including frequent annotations and Canvas posts, close reading papers, a midterm, and a final exam.

ENGL170101

Truth-telling in Literature Adair, Allison C Fall 2021

This course investigates how experience and imagination combine to produce compelling stories. We will question automatic distinctions between fact and fiction, examining written work instead on a spectrum of truth: from first-hand accounts and historical records to confessional poetry, historical fiction, and literary reportage, to parallel novels and even fantasy. Do literary techniques reveal or obscure truth? Can the imagination ever produce truth? We will consider the challenges of reliable and unreliable narration, cross-cultural translation, and embedded commentary in experimental poetry and metafiction. Authors include Tim O'Brien, Amitav Ghosh, Theresa Hak Kyung Cha, Plato, Emily Dickinson, Italo Calvino, and others.

ENGL171401

Reading the Fate of Man, the Face of God, and the Malevolence of the Whale in Herman Melville's *Moby-Dick* Martin, Michael Fall 2021

Core Renewal Course: *Enduring Questions Moby Dick (1851)*, arguably the greatest American novel, raises questions fundamental to human existence: What is fate? freedom? the meaning of life? the world? Can we know it? This course examines how characters, narrative voice, genre, and plotting create an almost biblical text; how depictions of whaling become parables; how historical references reflect contemporary politics; and how fiction can bring us to reflect on our own lives. Like *Queequeg's* tattoos, it presents a mystical treatise on the art of attaining truth . . . whose mysteries not even [he] himself could read while its value resides in simply raising the questions.

The Value of Work: Significance through Literature Hunt, Aeron P

Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take PHIL1721 with this course. "What role and significance does work have in flourishing lives and good societies?" This course pair offers Boston College students the opportunity to reflect on the significance and meaning of the human activity of work an activity that is likely to occupy a large portion of their lives. Around the globe, politicians promise "good jobs," and scholars discuss automation and "the future of work." But what is a good job? What form of value is most central to work as a part of a good life financial reward? social purpose? personal fulfillment? How do individuals and communities understand and achieve justice and meaning at work?

ENGL172901

The Role of Literature in Understanding the Complex Meaning of Justice DeRosa, Marla C

Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take UNAS1719 with this course. What can literature tell us about the complex interactions between individuals and the law? What are the links between values, ethics, religious beliefs, and the law. How do various authors grapple with the complex interplay of those elements? In what ways can literary texts serve as an argument for justice or a polemic against injustice? In this course we will read a range of fiction and nonfiction narratives that examine the meanings of justice and the role of individuals within a legal system. We will work to understand why societies enact laws and whose interests those laws serve. We will also examine the role of lawyers, judges, and litigants and the complex dilemmas they face in both upholding laws and pursuing justice. In the context of the United States, we will specifically examine texts that address the intersection of race, justice, and the legal system. Major Course texts include: Beloved (Toni Morrison), The Nickel Boys (Colson Whitehead), The Merchant of Venice (Shakespeare), To Kill a Mockingbird (Harper Lee), A Civil Action (Jonathan Harr), Just Mercy (Bryan Stevenson). Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. This broader understanding of literature will encourage students to consider the cultural work that literary texts can do in the pursuit of justice. Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. ENGL173001

Microbes and Us: Exploring Nature and the Human in the Environmental Humanities Wallace, Elizabeth

Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take BIOL1710 with this course. How does pairing the study of the natural sciences with the humanities help us discover the nature of human life? How do scientific understandings of basic life forms enlighten our understanding of the human? How do humanistic understandings shape our comprehension of the natural world? This course explores these questions by drawing parallels between the human behaviors and those of the minutest of living forms--microbes. Pairing microbiology with literary, philosophical, and critical readings allows humanistic and scientific disciplines to converse: what does each mean by life? What does it mean to be social? How are humans both alike and different from other creatures? We will ask how other life forms explain our existence and how an expanded scientific understanding results in new definitions of the human.

Encountering Inequalities: Disparity and Protest Art Brooks, John A

Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take HIST1726 with this course. How are inequalities normalized, and how might their normalcy be challenged? How did we arrive at our current racial and socioeconomic inequality, and how can we understand this moment in a historical context? How are inequalities normalized, and how might their normalcy be challenged? These paired courses will familiarize students with how power and resistance relate to race, ethnicity, and class. Students will learn to recognize the types and origins of inequalities, as well as their political impacts on U.S. democracy and democracies around the world. Our discussions will focus on the myriad ways civil society and traditional liberal thought create unequal systems and how marginalized communities resist those unequal systems.

ENGL173301

Crisis and Storytelling in the Age of Climate Change Palevsky, Hilary I; Song, Min  
Fall 2021

This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

ENGL213301  
Studies in Narrative Mitsein, Rebekah K Fall 2021  
This course introduces students to questions that they might bring to the study of narrative works--primarily novels, tales, and non-fictional narratives, though it may also include drama, film, and narrative poems. It aims to introduce the various critical frames through which we construct interpretations. As part of the process of reading, students will be introduced to common critical terms; narrative genres, conventions, and discourses; the construction of the character and the ways of representing consciousness; and the ordering of narrative time. The course will also expose the student to the implications of taking critical positions.

Fall 2021  
Students need not take these courses in chronological order. Fulfills the pre-1900 requirement. American Literary History 1 follows the development of American literary history from the landing of the Mayflower to the tumultuous decade of the 1850s, moving from such early writers as Bradstreet, Rowlandson and Taylor through such writers of the Revolution and Early Republic as Equiano, Franklin, and Rowson to such antebellum writers as Child, Thoreau, Hawthorne, Poe, Douglass, Whitman, and Melville. Course assignments include regular participation in class discussions, mid-semester and final examinations, and either one ten-page or two five-page essay(s). Students considering careers in secondary English education will be given the option of writing about approaches to teaching course texts.

ENGL217001  
Introduction to British Literature and Culture I Weiskott, Eric B  
Fall 2021  
Fulfills the pre-1700 requirement. Britain, Ireland, and their archipelago were home to an exceptionally vibrant early literary tradition spanning English, French, Irish, Latin, Norse, and other languages. Writing from these islands connected rulers and rebels, merchants and monks, brewers and bureaucrats. This course is a survey of British literature (well question the term) from the beginnings to 1700. Most texts are in English; some are read in translation. The course focuses on connections between literature, power, and the formation of literary canons. The survey covers all major genres of early literature from the archipelago. Texts and authors include Beowulf, Marie de France, Chaucer, Margery Kempe, Spenser, Shakespeare, Milton, and Behn.

ENGL217201  
Imagining the City Rotella, Carlo  
Fall 2021  
Formerly Titled: The City in Literature and Film. We examine how American literature and film have responded to the challenge of representing the city from Sister Carrie to Blade Runner, The Street to Do the Right Thing, and Native Speaker to Gangs of New York. Exploring the fit between the hard facts of city life and the creative choices that artists impose on them, we consider how novels and movies reckon with the formal, social, and conceptual problems posed by cities. We touch upon several cities and various genres: migration narratives, crime stories, science fiction, neighborhood novels, and more.

ENGL220001  
The Underground Press Ards, Angela  
Fall 2021  
Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. Note to all students: This course is included in CORE - Engaging Differences and Justice. The underground press was a vast network of loosely affiliated newspapers that emerged in the 1950s and 60s when young people asked very hard questions about the meaning of power and the role of the press. The outsider outlets spread through hundreds of communities throughout the nation, ranging from big city weeklies like "The Village Voice" and the Berkeley "Barb" to specialized periodicals representing the Black press, as well as other ethnic newspapers, progressive weeklies, and various conservative perspectives. This course examines the factors that helped pave the way for this journalism of dissent and how this history affects alternative media today.

Explore the Irish: An Introduction to Irish Studies Nugent, Joseph G  
Fall 2021  
How can a tiny island and its diaspora have so shaped the literature, film, music, art, science, and politics of the world? From charming backwater to center of technology, from bastion of Catholicism to gay marriage, through peace and conflict, Irishness (and Irish-Americanness) is an ever-unstable proposition. Exploring through categories such as gender, sexuality, and ethnicity its manifold mutations, this course will investigate the troubled stream of Irish history and culture from Jonathan Swift to Stephen Colbert, from W.B. Yeats to Riverdance, from JFK to U2, from Celtic Christianity to Celtic Tiger.

ENGL222001  
Classical Mythology Eisenfeld, Hanne E Fall 2021

This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does.

What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

ENGL227701  
Introduction to American Studies Tvetenstrand, Astrid G  
Fall 2021

This course offers an introduction to the interdisciplinary study of American culture. It is not a survey of American cultural history; rather, we will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. The forms we analyze will include examples from literature, film, painting, music, theater, landscape, and architecture, among others. Members of the American Studies faculty will present guest lectures to highlight various aspects of the field.

ENGL247001  
Black and Popular: Speculative Fictions by Black Writers Frederick, Rhonda  
Fall 2021

This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

ENGL248201  
Introduction to African American Literature Curseen, Allison S  
Fall 2021

This course surveys African American literature from its early-American beginnings to its present. While different semesters may organize around different motifs, the course endeavors to introduce students to major periods (e.g., The Harlem Renaissance); key players (e.g., W.E.B. DuBois); and recurring tropes (e.g., the trickster) conventions (e.g., call-and-response), and themes (e.g., movement-and-constraint) in Black literature. Examining both a range of literary genres and a range of artistic, political, and popular texts, the course

emphasizes African American literature as interdisciplinary and inseparable from the history and culture of both a dynamic black diaspora and a diverse and complicated America.

ENGL300101

Walking Infinite Jest Boucher, Christopher G Fall 2021

David Foster Wallace describes Enfield, Massachusetts--an important setting in his 1996 novel

Infinite Jest--as "a kind of arm-shape extending north from Commonwealth Avenue and separating Brighton into Upper and Lower, its elbow nudging East Newton's ribs and its fist sunk into Allston?". Sound familiar? In this course, we'll conduct a Bostonian's reading of Wallace's opus. Students will be required to write weekly critical reading responses, and should be prepared for the course's non-traditional structure: weekly meetings will sometimes be canceled in lieu of weekend on-site meetings in Brighton and Boston.

ENGL311901

The Graphic Novel and Marginality Puentes, Lorenzo A

Fall 2021

This course will give students the critical skills to read, understand graphic narratives: the dynamic interrelationship between images and text to convey meaning. In particular, this course will study how writers/artists such as Art Spiegelman, Marjane Satrapi, Alison Bechdel, Gene Lueng Yang, Thi Bui, and Joe Sacco, among others, use the medium of comics to engage readers in exploring and analyzing issues of difference and justice. How do graphic artists represent issues of race and ethnicity, especially among minority communities that struggle against a long history of racist representation in the US media? How do graphic artists depict issues related to gender, sexual orientation, social class, religion, etc. This course will highlight how artists use graphic narratives to call attention to cases of humanitarian crises in the US and in different parts of the world. The medium of comics, considered marginal, lends itself to advocacy of issues of marginalized groups in society. The medium also creates space for encouraging artists as well as audiences to think otherwise, to imagine alternative social possibilities. This course fulfills the Cultural Core Diversity Requirement (Engaging Difference and Justice).

ENGL319001

Memory and Testimony in Irish Theatre DEPT

Fall 2021

Do you have a family story about the past? Do you know of a story that isn't told? Do you know of people who want to tell their story but have no one to listen? This course focuses on Irish plays as a way of exploring the questions of who gets to speak, what stories get told, and what stories do not get heard. In Irish theatre we encounter zany characters who can't stop talking about a romanticized past, lonely voices speaking of deeply personal pain, and families who celebrate and inherit the memories of others. The plays in this course range from the comic to the tragic, and from fiction to documentary work. They ask challenging questions of how culture allows certain people to speak, and of how we can use our voices to tell our own stories. Each week students will read a new play and consider it in its cultural and critical context. There will be opportunities for writing creative as well as critical responses. Most of

all, this aims to be a lively class where we all get to consider what it means to remember, what it means to forget, how we can be better listeners, and how we can find our own ways to give testimony. Playwrights may include: Samuel Beckett, Brian Friel, Tom Murphy, Mary Raftery, Marina Carr, Christina Reid, Enda Walsh, Sebastian Barry, Louise Lowe, Grace Dyas. Emilie Pine is Professor of Modern Drama in the School of English, Drama and Film at University College Dublin, Ireland. She is Editor of the Irish University Review and lead investigator on the Industrial Memories project (<https://industrialmemories.ucd.ie>). Emilie has published widely as an academic and critic, most recently The Memory Marketplace: Witnessing Pain in Contemporary Theatre (Indiana University Press, 2020), and the multi-award-winning Notes to Self: Essays, which has been translated into fifteen languages. Her first play will premiere in 2021.

Rags and Riches: Poverty and Wealth in Eighteenth-Century England

Wallace, Elizabeth Fall 2021

Fulfills the pre-1900 requirement. This course examines the representation of poverty and wealth in eighteenth-century England. Using poetry, prose, drama, fiction, and visual arts as our texts, we will ask how the century generated stories and theories to account for economic disparities in society. Among other questions, we will ask how the period understood such phenomena as upward and downward mobility. How did emerging economic theory alter existing attitudes about social relations? What can these eighteenth-century texts tell us about our own attitudes towards poverty and wealth? Authors include: Defoe, Swift, Pope, Gay, Equiano, Blake, and Adam Smith.

ENGL352701

General Linguistics Owusu, Augustina Fall 2021

An introduction to linguistics the scientific study of human language and contemporary linguistic theory. Linguists use mathematical systems (often called formal systems) to develop precise theories that help us understand the rich cognitive processes that support our use of language to communicate, to conduct internal monologues, and much more. The course focuses on the major subfields within linguistics: phonetics, phonology, morphology, syntax, and semantics: how do linguists create and manipulate representations of language phenomena, and how do they analyze linguistic data? Our primary data will be from English, but we will also employ data from other languages. No previous exposure to the field is presupposed.

Transatlantic Passages in Eighteenth-Century Literature Mitsein, Rebekah K

Fall 2021

In 1776, a cartoon was published in England that personifies Britain and America as female combatants, slinging insults at one another as they face off in a fistfight. But their literary relationship was not always so adversarial, even after they parted ways following the American Revolution. In this class, we will examine the ways different kinds of Atlantic crossings shaped Anglophone texts on both sides of the ocean. The reading list may include fiction by Samuel Richardson, Penelope Aubin, and Royall Tyler, life writing by Mary Rowlandson and Mary Prince, and poetry by Phyllis Wheatley and James Granger. Fulfills the pre-1900 requirement and The Cultural Diversity Requirement (under EDJ).

ENGL412201  
Kafka, Beckett, Coetzee Lehman, Robert S  
Fall 2021  
This course will be dedicated to a reading of the works of three of the century's strangest writers: Franz Kafka (1883-1924), Samuel Beckett (1906-1989), and J.M. Coetzee (b. 1940). Although our principal focus will be on their novels, we'll also consider their work in a variety of other genres--parables (Kafka), film and theater (Beckett), and philosophy (Coetzee). We'll take up the question of how these writers responded to a rapidly modernizing world--a world characterized by war, revolution, new technologies, and a globalizing economy--as well as how they came to understand literature's past, present, and future.

Writing Workshop: Creative Nonfiction Kaplan-Maxfield, Thomas  
Fall 2021  
Over the past few decades, the best nonfiction being written has expanded to include not only such traditional forms as argument and exposition but also the mixed modes of creative nonfiction. As an intermediate-level course, we will build on the work of the First Year Writing Seminar and hone the skills needed in advanced writing electives. Students in this course choose their own topics and explore the range of possibilities now available to the nonfiction writer.

ENGL450001  
Sexuality and Film: Queer Theory / Queer Cinema Ohi, Kevin J  
Fall 2021  
Queer readings of cinema make especially clear queer theory's departure from enterprises that made it possible: from feminism, psychoanalysis, gay studies, and the search for "positive" representations, for example. Offering an introduction to queer theory, this course will also ask broader questions about sexuality and film. How does queer theory influence one's thinking about spectatorship? Why do we find films sexy even when, in a sterner mood, we might nevertheless find them politically objectionable? What if we look at films not as "examples" to be glossed but as modes of thought that pursue questions of sexuality in their own terms? This course meets the Cultural Diversity Requirement.

ENGL453501  
Topics in Creative Nonfiction: Writing and Activism: Good Trouble Garcia, Kimberly  
Fall 2021  
Topics in Creative Nonfiction: Writing and Activism: Good Trouble. "Ordinary people with extraordinary vision can redeem the soul of America by getting in what I call good trouble, necessary trouble," said Congressman John Lewis. This advanced creative nonfiction course will encourage students to observe, engage with and write about the good trouble being enacted in our historical moment that excites them. From the NBA to backyard permaculture or public protests, students will explore the good trouble they have experienced or admire, using the many tools creative nonfiction allows memoir, blog, flash journalism, and lyrical essay. Through careful observation and documentation of the hidden connections between the personal and public moment, students will be encouraged to actively participate in imagining what a better world might look like and inspiring good trouble in their readers. Text include: March, graphic memoir by John Lewis; The Book of Delights by Ross Gay; Best American Essays 2019 edited by Rebecca Solnit; Tell It Slant by Miller/Paolo.

ENGL457701  
Writing Workshop: Poetry Adair, Allison C  
Fall 2021  
The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

Writing Workshop: Fiction DEPT  
Fall 2021  
Enrollment limited to 15.. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

Capstone: Mindfulness and Storytelling Mathieu, Paula  
Fall 2021  
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. This course will invite students to reflect on their humanity by exploring storytelling and naming through various methods. Via reading short stories and essays, we will engage how others name the world in an effort to change it. By interviewing an elder, we will learn awareness and skills of listening to inform our own views of life. And via a focus on mindfulness nonjudgmental awareness of the present moment while observing ones thoughts, emotions, and reactions we will engage our own internal storytelling to reflect on ways our inner rhetoric can help us or hold us back.

ENGL469601  
Dante's "Divine Comedy" in Translation Shepard, Laurie  
Fall 2021  
Conducted in English. Elective for Italian major or minor. An introduction to and critical reading of the "Divine Comedy" (in English translation), one of the world's greatest epic poems, produced by "the chief imagination of Christendom" (Yeats). Dante's journey through Hell, Purgatory, and Paradise will be analyzed at its multiple levels of interpretation: literal and allegorical, theological, philosophical, political, and literary. Compendium of an entire epoch of European civilization, the "Comedy" will also be interrogated for its responses to the fundamental questions of human existence: God, the Cosmos, the Self, Good and Evil, Right and Wrong, Suffering, and Happiness.

ENGL480401  
Digital Literature Boucher, Christopher G Fall 2021

Technology is changing the way we read and write literature. Browse the iOS or Android app store and you'll see that countless writers and artists are now using digital-specific tools--from hyperlinks to geolocation to augmented reality--to create cutting-edge electronic literature. This course will invite you to study the genre both critically and creatively; we'll review creative writing fundamentals, elements of new media, hypertext theory, and basic programming skills. Then we'll synthesize all of this in order to write and code our own original digital projects. No prior experience in creative writing or computer programming is required for this course--just a willingness to learn about both disciplines and the ways in which they intersect.

ENGL500201  
Seminar: Podcasting James Joyce Nugent, Joseph G Fall 2021

One astonishing book, one unforgettable experience, one seminar a week. Intermittently baffling, always fascinating, frequently hilarious, Joyce presents a challenge that no serious devotee of literature (not just English majors) should refuse. Along our intimate journey through the greatest novel of the Modernist movement, we'll employ a few modern digital tools to help ask great humanistic questions. Eagerness, curiosity, and a sense of humor are the only prerequisites. The demand that I make of my reader, Joyce wrote, is that he should devote his whole life to reading my works. Don't wait. Start now. Formerly Titled:- ATS: Podcasting Ulysses

ENGL500701  
Seminar: Toni Morrison Frederick, Rhonda Fall 2021

Using a selection of Toni Morrison's creative and non-fiction writings, we will explore various United States' preoccupations as they are refracted through a black literary perspective. In other words, we will identify and explore thematic and artistic concerns that arise in Morrison's work and that dialogue with United States' historical realities. The following themes shape this course: dominant cultural mores and their impact (The Bluest Eye); legacies of slavery (Beloved); gender, race, and Americanness (A Mercy); culture as a sustaining force, masculinity (Song of Solomon); women's responses to patriarchy and constructions of femaleness (Sula); and race, belonging, citizenship (Home).

ENGL502501  
Seminar: American Fiction and the Family Tanner, Laura E Fall 2021

This experimental seminar will explore the representation of family dynamics and everyday life in American literature of the last century. We will consider how the dynamics of race, class, aging, grief, gender, violence, power, consumerism, desire and domestic space shape the construction of individual and family identities in American fiction, film, and graphic narratives. This class will focus on nontraditional and collaborative alternatives to the research-based seminar model, including discussion partners, class presentations on non-literary media, creative non-fiction writing, interview exercises, and optional video and music projects, as well as co-authoring of more traditional critical essays. Texts may include novels by William Faulkner, Marilynne Robinson, Don DeLillo, Louise Erdrich and Yaa Gyasi, as well as graphic memoirs by Roz Chast and Alison Bechdel and short fiction by writers including James Baldwin, Jhumpa Lahiri, Raymond Carver, Gish Jen, and Sherman Alexie. As we analyze literary and artistic strategies for representing the complex and subtle emotional dynamics of relationship that often define family life, students will also be asked to reflect critically and creatively on their own assumptions. Participants will be required to engage in dialogue with others, listen carefully, question their own upbringing and experiences, and experiment with new forms of expression and collaboration; students who are willing to think outside the box are especially welcome!

ENGL502601  
Seminar: Building a Better Bestiary: Representing Medieval Animals Stanton, Robert G Fall 2021

Fulfills the pre-1700 requirement and Seminar Requirement. This course explores the troubled boundaries between human and non-human subjects and objects in the Middle Ages. Animals provided rich symbolism for human virtues, vices, and activities, often at the cost of any subjectivity or voice, but categories distinguishing humans from animals frequently blurred or broke down, creating both crises of human identity and anomalous animal voices; we will be on the lookout for animals who talk or bite back. We will read a variety of medieval genres alongside works in the emerging field of Critical Animal Studies to explore the ways in which humans and animals create one another. Our methods will incorporate philosophy, mythology, animal rights and ethics, and visual art with literary and historical texts from the Middle Ages.

ENGL601001  
Seminar: Shakespeare: Truth and Lies Crane, Mary T Fall 2021

Fulfills the pre-1700 requirement for undergrads. Also fulfills the Seminar requirement. Undergrad/Grad Level: Restricted to Juniors, Seniors, and Graduate Students. Shakespeare lived and wrote at a time when the ideas about what was true, and how to determine what was true, were changing. The Protestant reformation, invention of the printing press, humanist education, exploration and colonialism, and the beginnings of the scientific revolution all motivated people to focus on questions of truth, falsehood, and epistemology. Although newspapers were just beginning to be invented near the end of Shakespeare's life, his plays are obsessed with fake news, how to tell if people are lying, how to figure out what is true. In this course we will read a selection of Shakespeare's comedies, histories, tragedies, and romances with a focus on how truth and lies are represented. We will also consider the history of various conspiracy theories that have tried to establish that William Shakespeare did not write the plays attributed to him.

ENGL601301  
Seminar: Dickens and his World McAleavey, Maia M Fall 2021

Pre-1900 for undergraduates. Undergrad/Grad Level: Restricted to Juniors, Seniors, and Graduate Students. Charles Dickens was one of the most beloved authors of the Victorian period, and his novels can still make us laugh and cry. This course provides an opportunity to survey Dickens's astonishing career: raging against social injustice, wallowing in sentimental deathbed scenes, and cackling at ridiculous caricatures. Novels will likely include Oliver Twist, David Copperfield, Bleak House, and Little Dorrit. Topics will include: the power and danger of sentimentality and melodrama; characterization and narrative structure; satire and comedy; journalism and fiction; and Dickens's pioneering development of serialized novels, which laid the groundwork for today's serial television.

ENGL603001  
Seminar: Digital Donne DEPT Fall 2021

In this course we will read selections from the writings of John Donne and his circle, drawing often on (and ourselves contributing to) the extensive digital resources available for exploring them. Paradoxically, while Donne left behind a large prose corpus, he shied away from printing his poems. Because those who read his hand written productions made myriad copies for themselves, we have more, and more varied, surviving manuscript versions of Donne's poems than we have for any other English poet of the sixteenth and seventeenth centuries. By creating digital data for the whole corpus of Donne's poems, scholars and their students have made it possible to access, search, and probe these materials in unprecedented ways. We will concentrate on the poets erotic, satirical, and religious verses. Well also look into the meditations, written amidst an epidemic, in which he declared that no man is an island and sought to explore its implications. The course satisfies the "discipline" specific requirement for the Graduate Certificate in Digital Humanities.

ENGL603101  
Seminar: Theories of Blackness: Troubling Vision Curseen, Allison S Fall 2021

Organized around Nicole Fleetwood's monograph titled Troubling Vision, this course will think about the convergence of vision and performance in black artistic and intellectual production. The course will approach canonical black texts like The Narrative of the Life of Frederick Douglass, Incidents in the Life of a Slave Girl, or The Souls of Black Folks with contemporary scholarships explicit theorization about blackness and black bodies in performance. Possible scholars/theorists explored include Daphne Brooks; E. Patrick Johnson, Fred Moten, Daniel Goldman; Andrew Lepecki, Maurice Wallace, Robin Bernstein, and Erica Edwards. Possible authors/artists examined may include: Harriet Jacobs, W. E. B. DuBois, Ida Forsynth, Bert

Williams, Moms Mabley, Susan Lori Parks, August Wilson, Tyler Perry, Donald Glover, Kara Walker, Nick Cage, and Sun Ra, and the creators and actors of Pose. Graduate/Undergraduate Seminar Course. Meets the Theory Requirement for M.A. students.

Holocaust Literature: History, Memory, Legacy Shrayner, Maxim

Fall 2021

An overview of the history and legacy of the Shoah (Holocaust) followed by an examination of the variety of literary responses by literary witnesses and survivors, as well as by writers removed from the wartime horrors by distance, time, country, and language. Questions of metaphysics, ideology, ethics, aesthetics, memory, and cultural theory as formulated and debated in poetry, fiction, nonfiction, and discursive writings. The readings include works originally written in Russian, Yiddish, Polish, German, Italian, French, and English by Ilya Selvinsky, Vasily Grossman, Ilya Ehrenburg, Avrom Sutzkever, Tadeusz Borowski, Paul Celan, Primo Levi, Theodor Adorno, Elie Wiesel, Vladimir Nabokov, Hannah Arendt, Arthur Miller, W. G. Sebald and others. All the required readings will be in English translation.

The Skull and the Mirror: Theatre, Philosophy, Language Sofer, Andrew

Fall 2021

This course explores how theatre translates philosophical questions and predicaments into the language of the stage. Rather than tracing a chronological history, we will look at several key intersections drawn mainly from Shakespeare and modern/contemporary theatre. Our pairings (or triads) may include Plato-as-philosopher and Plato-as-dramatist; Nietzsche and Ibsen; Shakespeare and Ordinary Language Philosophy; Edward Albee and Speech-Act Theory; Beckett, Adorno, and Rancire; Neil LaBute and aesthetic theory; Tom Stoppard and epistemology; Michael Frayn and quantum uncertainty; Caryl Churchill and ethics. This class does not presume any previous background in either western philosophy or drama. All are welcome.

ENGL702401

Anne Bradstreet and Walt Whitman Pottroff, Christy L

Fall 2021

This course considers an odd couple--seventeenth-century Puritan poetess Anne Bradstreet and Walt Whitman, the nineteenth-century poet of the body. Though their historical contexts have largely kept them separate, their poetry often explores the same imaginative terrain--the beauty and vulnerability of the human body, the divinity of nature, and what it means to love another. By drawing these two poets together, we will learn how American poetry evolved over two centuries. This course is also, in part, a foray into literary archaeology. Students will participate in an archaeological survey of Bradstreet's Massachusetts homes and consider how these material findings--shards of pottery, interior architectural features, and the natural environment--reshape our understanding of America's first poet.

ENGL740001

Seminar: Ireland and Britain: Kingdom, Colony, Nation? Smith, James M

Fall 2021

As Seamus Deane asserts, "Ireland is the only Western European country that has had both an early and a late colonial experience." This seminar spans the major cultural and historical moments and surveys the associated literary production connecting these experiences: the Norman invasion, the Elizabethan and Jacobean plantations, the emergence of an Anglo-Irish identity, the cultural nationalist response to imperialism, the ongoing decolonizing process, and the emergence of a post-national "liberated" society. The seminar's main objective, therefore, is to evaluate how Irish culture manifests, responds to and/or resists the colonial encounter. In the process, students analyze the complexities of positioning Irish cultural studies in the wider context of post-colonial studies. Particular attention is paid to the issues of language, literary tradition and literary authority, and to representations of place, gender, and identity.

English Language Training for Graduate Level Students: Focus on Speech and Presentation Skills

Anderson, Lynne C

Fall 2021

Designed for students whose first language is not English, this course will emphasize the oral/aural language skills required for success in graduate work. It will provide students the opportunity to hone their speaking and listening skills through group discussions, presentations, and targeted practice in pronunciation, stress, and intonation through the reading of poetry and tongue twisters. The course may be particularly beneficial to those with teaching responsibilities at BC. Non-credit and offered free of charge by GSAS to its students during the fall semester.

Students who enroll in the course are expected to attend all classes throughout the semester.

The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

ENGL776001

Justice and the Incommensurable in Contemporary Theory Restuccia, Frances

Fall 2021

Fulfills the Theory requirement. This graduate course will concentrate on a myriad of contemporary theorists who contribute fascinating thought to the question of justice, raising the hard, if not mysterious, question of what exactly justice means or is. Most of the authors we will read such as Nancy, Badiou, Agamben, iek, and Kristevacuriously carveout an incommensurable dimension within the world that is simultaneously externalto it. They preserve an estimate domain of, as Nancy phrases it in Adoration: The Deconstruction of Christianity II, being outside the world in the world, on which their conceptions of justice interestingly depend. The theorists of this class tend to be atheists who nevertheless insist on faith, belief, spirit, and/or the divine. Earlier contemporary theorists, such as Derrida and Benjamin, will be considered as well, as they too are situated at the intersection of atheism and spirit/divinity--with its link to justice. We will also take up black studies theorists to examine how they conceive justice and whether or not they tie it to incommensurability, starting with Fanons Black Skin, White Masks and Wildersons Afropessimism and moving on to the theoretical writing of Marriott and possibly others.

Joyce's Ulysses Howes, Marjorie E Fall 2021

This course will be dedicated to an extended exploration of James Joyce's Ulysses, a novel that has often been called the most important literary work of the twentieth century. Most of our time will be devoted to an intensive reading of the novel itself, but we will also read selected critical and historical materials. No prior knowledge of Joyce's works is required, just a willingness to tackle the challenges offered by his most influential masterpiece.

ENGL888701

Introduction to Advanced Research Stanton, Robert G

Fall 2021

This course will acquaint you with the resources to carry out the central tasks of literary scholarship. Bibliography (studying the production, dissemination, collection, location, and identification of literary artifacts and versions) forms the dynamic basis for scholarship and criticism of all kinds, just as critical sensibility guides our choice of what to look for. You will be guided through the reference works and databases in the Boston College library and elsewhere, discuss the goals, purposes, and future of the field of literary studies, explore the phenomenon of digital humanities, and produce an original project based on archival sources.

ENGL900801

Ph.D. Seminar: Queer Theory and the Novel Ohi, Kevin J

Fall 2021

In what ways might queer theory illuminate the history of the novel, and how might a consideration of the novel as a genre shape our sense of the theoretical concerns of queer

theory? Queer theory can be, curiously, both sexualizing and desexualizing: removing one's alibis for suppressing evidence of non-normative desire, it also makes us pay attention to sex by showing us that it is not merely sex, by reminding us that, for human beings, the experience of desire is saturated by forms of human meaning. How texts represent sex is a far from trivial question; it is also not the only question one can ask about sex in literary works. Focused on sex in the novel, and informed by queer theory, the course will lead us to consider a series of questions about the novel genre: formal questions, primarily, of style and voice, of characterization, narration, and the representation of interiority, these are also questions, we will come to see, of the history of desire, and of how intimate these are shaped by larger social forces. Along the way, we will also ask ourselves about the particularly literary dimensions of queer theory as it has developed between the 1990s and today. Ultimately, it is to be hoped that the course will help us reflect on what we do as critics, no matter what our particular specialties or investments: the starkly framed question of sex in the novel might allow us to read novels and theory without reducing literary texts to inert examples of theoretical insights, or particular theories to a mere interchangeable methods for reading texts. Discussions will focus on detailed readings of novels written in English between 1715 and 2019, and of works of queer theory.

## English Courses: Spring 2022

ENGL101001

First Year Writing Seminar Mitsein, Rebekah K

Spring 2022

Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL107901  
Literature Core for English Language Learners Labriola, Amanda  
Spring 2022  
Designed as a seminar for English Language Learners, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core strives to develop the student's capacity to read and write with clarity and engagement and to provide an introduction to literary genres.  
Linguistic support for students from diverse language backgrounds is provided throughout the semester. Department Permission Required--from the English Department.

ENGL109401  
An Introduction to Modern Irish II Cahill, Sean R  
Spring 2022  
Following on from ENGL1093, this course offers a continuing introduction to the Irish language for American students. This semester we will learn the past, future and imperative tenses. Well examine the history of English and British policy toward the language, up to the controversy over the Irish Language Act today. We will continue to learn songs, and examine simple poetry and drama in Irish. Through this exploration you will enlarge your understanding of the cultural heritage out of which the language emerged, and which is accessible through Irish Gaelic.  
Completion of this and Continuing Modern Irish I and II will fulfill the Morrissey College of Arts and Sciences language proficiency requirement.

ENGL118001  
Lit Core: Narratives of Slavery, Incarceration, and Freedom DeRosa, Marla C  
This section of Literature Core will focus on narratives that speak to questions of slavery, incarceration, and freedom--both literal and metaphorical. The current pandemic along with the mass demonstrations against systemic racial injustices will provide a particular backdrop and context from which to consider these questions and issues. The course will start with historical and political writings about slavery from the 1800s and the social contexts in which these writings were produced and consumed. We will then move on to historical and contemporary fiction and film that informs and challenges our historical understanding of slavery and the relationship between slavery and our current system of incarceration. Course texts may include Homegoing (Yaa Gaysi), The Narrative of the Life of Frederick Douglass, David Walker's Appeal, Beloved (Toni Morrison), Kindred (Octavia Butler), The Nickel Boys (Colson Whitehead), and Just Mercy (Bryan Stevenson).  
Credits: 3

#### ENGL118401

Lit Core: Literature, Testimony, Justice Brooks, John A  
Spring 2022

This section of Literature Core will explore how literary texts bear witness to historical events and address social issues. Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's Benito Cereno, Narrative of the Life of Frederick Douglass, Toni Morrison's Beloved, Art Spiegelman's Maus, Tommy Orange's There There, and The Laramie Project.

#### ENGL118601

Lit Core: Working Class: Stories of Labor, Class, and Privilege in America Matson, Suzanne M  
Spring 2022

This course focuses on American literature about work, especially blue-collar work, service work, and women's work. In reading working lives, we will also be reading national narratives about class, gender, race, and immigration. In diverse texts ranging from Walt Whitman to GishJen, we will ask: how are power and privilege represented in this literature? What are the underlying assumptions How have contemporary class divides taken root from our history? By looking at style, voice, figurative language, and structure, we will discover how writers strategically shape meaning across genres.

#### ENGL171001

Family Matters: Stories of Adoption and Kinship Smith, James M  
Spring 2022

Core Renewal Course: Enduring Questions What makes a family? Why does kinship matter? How can reading stories of adoption inform our response to such questions? In this course students will examine adoption as narrative event (exploring its relationship to the bildungsroman, the rags-to-riches story, memoir), as image (the orphan, the abandoned waif, the unmarried mother), and as metaphor (of dependence and independence, of separation and affiliation, of origins and fresh starts). And because adoption foregrounds fundamental issues of identity (constructed and inherited), we will investigate the role(s) of nation, empire, and religion in regulating childhood and family life.

#### ENGL171501

Revolutionary Media: How Reading Changes Us Crane, Mary T  
Spring 2022

Core Renewal Course: Enduring Questions As digital media have become more prevalent, studies have shown that they have changed the way we read and that various modes of reading shape our thinking, our feelings, and even our brains in varying ways. We read textbooks differently than we read poems, tweets differently than we read novels. This course centers on the cognitive and social contexts of reading, and will read a range of texts in different media, from 1450 to the present, that deal in some way with the nature of reading itself, including pamphlets, poems, novels, a graphic novel, film, and social media. We will also work on developing strategies for effective reading and writing.

#### ENGL172501

Narrative and Myth in American Culture: The Case of Disney Rudner, Bonnie  
Spring 2022

Core Renewal: Enduring Questions For Freshmen Only Storytelling and narrative have been central elements of communication since humans began to live in social structures. For hundreds of years, folk tales were adapted in order to influence social beliefs, values, attitudes, and behaviors. This literature Core course will explore the history of folk tales and their movement around the world. After reading source material from Grimm, Perrault, Anderson, and others, we will focus on the ways tales have been altered by the Disney Corporation in order to assess the impact of the movies on audiences.

#### ENGL173201

Shifting Forms: Sexuality and Belonging in Modern Literature and Film Ohl, Kevin J  
Spring 2022

How does art shape or mediate the formation of (larger and smaller, mainstream and minority) political and social groups? How do the arts help define the public in a Republic? How do aesthetic objects shape minority communities, and their place in a larger social world? Can examining artists use of inherited forms illuminate the political and affective consequences of individuals banding into groups? Tracing representations of citizenship, political participation, and the nation-state since the late 19th century, and, on the other hand, queer film and literature (mainstream and avant-garde) from the same period, we will consider national narratives and national identity in Europe and the United States, and queer art and the formation of minority sexual cultures.

#### ENGL173401

Boundaries of Belonging: Race and Anti-Essentialist Art Brooks, John A  
Spring 2022

We have control over our identities or do we? We assume that identity means our sense of self, or that it reflects who we are because of our personality and experiences. This description indicates that we have control over our identities but do we? Identity is not just individual, it is also collective because it denotes social markers like race, gender, sexuality, language, and religion. Focusing on race, these paired courses explore the ambiguities and tensions between individual and collective identities, as well as how racial identity formation in the U.S. is mediated by outside forces. Key topics will include how space and place mediate racial identity, but also how racial discourse recycles racist ideas to predetermine how racial groups can be seen, known, and imagined. By surveying literature, film, and music while interrogating concepts like mobility/containment, inclusion/exclusion, and belonging/alienation, we will see how people have created and contested the boundaries of racial and spatial divisions across the U.S.

ENGL213301  
Studies in Narrative Lehman, Robert S Spring 2022  
This course introduces students to questions that they might bring to the study of narrative works—primarily novels, tales, and non-fictional narratives, though it may also include drama, film, and narrative poems. It aims to introduce the various critical frames through which we construct interpretations. As part of the process of reading, students will be introduced to common critical terms; narrative genres, conventions, and discourses; the construction of the character and the ways of representing consciousness; and the ordering of narrative time. The course will also expose the student to the implications of taking critical positions.

ENGL214301  
American Literary History III Tanner, Laura E  
Spring 2022  
This course provides an introductory overview of literature written in the United States from World War I to the early twenty-first century. We will look at the ways writers of this period have experimented idiosyncratically and in dialogue with one another as modernism turned postmodern, as canons collided and collapsed, as movies and music albums, as well as graphic literature displaced some of literature's more traditional forms. The course is largely conversational but structurally supported with student oral presentations. Required texts may include fiction by William Faulkner, Willa Cather, Toni Morrison, Maxine Hong Kingston, Sherman Alexie, and Junot Diaz, plus graphic literature by Art Spiegelman and Thi Bui. Requirements for the course include an oral presentation, two critical essays, two section exams, and a final exam.

ENGL217101  
Introduction to British Literature and Culture II Seshadri, Kalpana R  
Spring 2022  
Fulfills the pre-1900 requirement.. This lecture course explores great British writers from 1700 to the present. This period includes (among much else) the great essayists and satirists of the eighteenth century, the Romantic poets and Victorian novelists of the nineteenth, the modernists of the twentieth, and the world writing that follows the break-up of the British empire. We consider these works in light of the cultural context in which they were written.

ENGL219901  
Introduction to Caribbean Writers Frederick, Rhonda  
Spring 2022  
The Caribbean, merely viewed through the lens of colonial history, often does not reflect the diversity and complexity of the region. From a colonial perspective, therefore, the Caribbean is both "known" and "unknown." Our work for this course compares and contrasts versions of the region by examining colonial histories and current literary traditions. We will pay particular attention to the ways oppositional cultures and identifies manifest in Caribbean literature. Themes of this course include: colonialism, History/histories, gender, geography ation, sexuality, class, and culture. Varied texts and media will assist in our interpretations of the Caribbean and its diaspora.

ENGL222201  
Introduction to Creative Writing for Multilingual Students Anderson, Lynne C  
Spring 2022  
Are you a speaker of another language (or languages) in addition to English? Have you always wanted to write creatively but never had the time? In this beginning-level creative writing workshop, participants will embark on their own personal, artistic journeys and gain confidence as writers of English. You will consider the languages, family rituals, and stories that have shaped you by writing deeply personal essays and spoken-word poems that explore your identity as a writer and storyteller. You will write weekly, both in and out of class, and learn to listen carefully to your peers and the stories they have to share. Well discuss your classmates drafts throughout the semester and you will learn to provide thoughtful feedback to help one another build confidence and find joy in writing. In addition to reading the work of students in our workshop, we'll read texts by multicultural storytellers including Sandra Cisneros, Jhumpa Lahiri, and Chang Rae Lee and explore the way language and cultural rituals shape identity. We will encourage one another to write boldly and freely and be creative with form, looking to spoken word poets, such as G Yamazawa who writes from the lens of the cultural outsider, for inspiration. Well experiment with language mixing, code-switching, play with sentence structure, and learn to abandon the rules of English grammar in early drafts in order to free ourselves to explore our personal stories more deeply. All levels of writers are encouraged to register.

ENGL224101  
Playwriting I Cummings, Scott T  
Spring 2022  
This writing-intensive course offers a practical introduction to the art and craft of writing for performance. Students will engage in numerous writing exercises that highlight the special demands and opportunities of writing for the stage. Emphasis is placed on finding ways to contact and release the theatrical imagination and on mastering the basics of writing a solid dramatic scene. Exemplary plays by established playwrights will be studied as appropriate, but the overwhelming emphasis is on student writing.

ENGL227801

American Culture: Engaging Difference and Justice Harrison-Kahan, Lori Spring 2022

This course offers an introduction to the interdisciplinary study of American culture with an emphasis on questions of difference, justice, and power. We will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. While assembling a toolkit of interpretive moves we can make on American culture and working to build stronger analyses, we will also consider how American society and culture have been defined by differences of race, class, gender, sexuality, dis/ability, religion, and other socio-cultural categories. We will consider how American Studies scholars have combined theory and praxis in order to expose injustice in the nations past and present; form communities based on principles of inclusion and solidarity; and create just conditions for citizenship and humanity. The materials we analyze will include examples from film, television, music, literature, theater, comics, photography, advertising, among others. Each unit will be organized around a question that generates further questions, analysis, and discussion. The questions include, for instance, Why is Indigenous Studies central to American Studies?, What does visual culture tell us about race in modern America?, and How do we see race and religion after 9/11? During the semester, we will also attend a number of events sponsored by American Studies, AADS, and other interdisciplinary departments, centers, and programs that represent a variety of interests, subjects, and approaches. This course satisfies the university Cultural Diversity requirement. For English majors this course also satisfies the Literature Across Worlds requirement. Note for American Studies Minors: Students can take either ENGL2278 or ENGL 2277: Introduction to American Studies to satisfy the introductory course requirement. (Students cannot receive credit for both courses.)

ENGL228201

Knights, Castles, and Dragons Resler, Michael Spring 2022

Conducted in English with all texts in English translation. No knowledge of German is required. Counts toward German major, German minor, and German Studies minor.. A study of the masterpieces of the first great blossoming in German literature including The Nibelungenlied, Tristan, and Hartmann von Aue's Erec. Central to the works of this age are (1) the rise of knighthood and (2) the spreading to Germany of the legend of King Arthur and the knights of the Round Table. In addition, older Germanic-heroic influences will be examined in certain of the works. The literature will be discussed in the larger context of its sociological and historical background. The literary traditions of France will be systematically linked to contemporary developments in Germany.

ENGL228301

Comparative Drama Haskin, Dayton W Spring 2022

Fulfills the pre-1700 requirement. This comparative literature course is designed to explore plays from two richly productive periods of the drama in Western history. It takes up the Greeks, especially works by Aeschylus, Sophocles, and Euripides, and examines the foundational theory of tragedy in the Poetics of Aristotle. It also attends to work by great playwrights of early modern England: Marlowe, Shakespeare, Jonson, and others. The course includes an orientation towards production and affords modest opportunities for experimenting with what may be learned in performance.

ENGL320201

Disability Studies Dunsford, Clare M Spring 2022

Disability and ability are socially constructed categories that provoke questions about how we as a society deal with difference. This course explores representations of disability in fiction, poetry, memoir, and essays. Questions of representation--who gets to tell the story, how disability has been represented historically at different times and in different cultures--will be considered with reference to the work of theorists like Rosemarie Garland Thomson and Tobin Siebers. Readings may include Sophocles' Philoctetes, Wordsworth's "The Idiot Boy," The Curious Incident of the Dog in the Night-time, and Michael Berube's Life as We Know It: A Father, A Family, and an Exceptional Child, among others.

ENGL330901

Writing Deindustrialization: Rhetorics of Class and Labor Pauszek, Jessica M Spring 2022

This course will explore topics of work, labor, and class identity from both local and global standpoints, with our primary focus being on stories of deindustrialization and its aftermath. In doing so, we will look at histories of class-based labor through various texts (articles, podcasts, songs, documentaries, archival sources). We will also discuss the rhetorics surrounding work, labor, and social class, examining how people talk about these concepts and their relevance to our current moment. This work will require us to think about how class intersects with other identities as well (including but not limited to identities grounded in gender, language, race, nationality, sexuality, and more).

ENGL332501

The History and the Future of the Book Pottroff, Christy L Spring 2022

A book may only be made of paper, cardboard, ink, and glue, but it is nonetheless a remarkable piece of technology. This class is concerned with the long history, the varied present, and the uncertain future of the book in the digital age. We will explore three central questions: What is the history of the book as a physical and cultural object? How have current disruptions in reading and writing technology changed the way we use and imagine books? What does the future of the book look like?

ENGL332701

The Victorian Coming-of-Age Novel Dougherty, Daniel Spring 2022

The coming-of-age story has existed for centuries and is still one of the most popular narratives in books and films. In this course we will read a selection of some of the best known and enduring novels in the genre, particularly those that depict the rapidly changing and evolving Victorian world. Recurring course themes will include youth and maturity, self-discovery, family, friendship, and growth. We will think through questions that complicate that genre as well as questions that seek to answer why the coming-of-age story has lasted in recognizable form for as long as it has. Potential authors include Charlotte Bronte, Charles Dickens, George Eliot, and Joseph Conrad. This course satisfies the pre-1900 requirement for English majors.

ENGL333201

Ireland Says Yes: Queer Love in Irish Literature Lehre, Theodore S Spring 2022

With the 2015 legalization of same-gender marriage in Ireland, there is more opportunity than ever to consider the LGBTQ+ community's indelible impact on Ireland's culture and, in this course especially, its literature. This course examines queer love and its manifestations in Irish literature, from childhood crushes to steamy passions to widowed grief. We will discuss this literature in its historical context and put it into conversation with international queer writers and thinkers. Through a period-spanning exploration of poetry and prose, we will consider how literature reflects queer people living and loving in Ireland. The course may include the works of Emma Donoghue, Colm Toibin, Jamie O'Neill, Mary Dorsey, and Kate O'Brien, as well

as the accounts and histories of historical Irish figures like Roger Casement and Eva Gore-Booth. This course satisfies the Literature Across Worlds requirement for English majors.

ENGL333601  
Novels of the World Restuccia, Frances  
Spring 2022  
Fulfills the Cultural Diversity Requirement Focus on contemporary novels by authors from various places across the globe. We will explore the ideas, narrative structures, and styles of writers such as Mahfouz (Egypt), Kundera (former Czechoslovakia), Sebald (Germany), Pamuk (Turkey), Hosseini (Afghanistan), Tahar Ben Jelloun (Morocco), and Coetzee (South Africa). Through close reading, we will examine the aesthetic dimension of each novel, comparing the books as we proceed. We will also be attuned to their political, social, and historical dimensions. With as much sensitivity as possible, we will address questions of cultural difference. Relevant post-colonial and psychoanalytic theory will also be included.

ENGL333801  
Americanization and the Rhetorics of Citizenship Portillo, Vincent  
Spring 2022  
In this course, we will explore how race, ethnicity and social class influence thinking about normative ideals of citizenship. We will turn our attention toward underrepresented communities including migrants, racialized and gendered individuals and others labeled unfit that have navigated the needs of citizenship, while balancing heritage languages and identities as a foundation of community knowledge and values. Throughout the semester, we will work collaboratively, reading, researching and writing about evolving questions and concerns. At the start of the semester, we will engage shared readings, largely non-fiction, from across disciplines, including American Studies, Disability Studies, and Cultural Rhetorics. These readings will explore the ways in which the individual and national bodies are described rhetorically, with an emphasis on citizenship as a nativist cure for unfit individuals. Next, we will turn to the archives where we will engage a number of primary materials that explore the contribution of marginalized communities to conversations on citizenship with an emphasis on heritage language, as well as community knowledge and values. For a culminating research project, students may seek to intervene in ongoing conversations on citizenship, advocating for the ways in which citizenship may be enacted and embodied within a community of their choice. Potential topics, for example, may include representations of citizenship during BLM protests at public monuments, or voting rights, race and citizenship schools. This course satisfies the Literature Across Worlds requirement for English majors.

Asian American Literature: Immigration, Exclusion and Engagement Puente, Lorenzo A  
Spring 2022  
This course explores Asian American narratives on the experience of immigration, exclusion, and engagement in social action and advocacy in the US. Texts that we will study include writings by Sui Sin Far, Carlos Bulosan, Maxine Hong Kingston, Chang-rae Lee, Han Ong, Viet Thanh Nguyen, Gene Luen Yang, and Thi Bui. The course will include a module on contemporary Asian American social activism, including community-based initiatives on the issue of Boston's Chinatown and gentrification. This course satisfies the university Cultural Diversity requirement. For English Majors, this course satisfies the Literature Across Worlds requirement.

ENGL401101  
Faulkner to Beyonce: New South Aesthetics Ards, Angela  
Spring 2022  
Beyonce Knowles' 2016 audiovisual project, Lemonade, conjures a black Southern experience from multiple places and modes--from memories and sounds of New Orleans pre- and post Hurricane Katrina, to the ancestral wisdom of grandmothers passed down through the generations. The course explores how Lemonade flips familiar cultural markers of southern identity into a meditation and manifesto about what it means to be black and Southern now. We will ground our readings and discussions with question such as these: What type of South is Lemonade trying to get us to see and hear? What are the feminist frameworks, from Zora Neale Hurston's Their Eyes Were Watching God to filmmaker Julie Dash's Daughters of the Dust, that animate Lemonade's vision? And what exactly does it mean to "get in formation"?

ENGL402101  
Unrequited Love Ohi, Kevin J  
Spring 2022  
Fulfills the pre-1900 requirement. In unrequited love, one confronts, in a deprivation as primal, almost, as hunger, the limits of one's power to shape the world, discovers the radically alien nature of others' desires and minds. This course will explore the many complexities of that painful mismatch, and the ways its unresolved contradictions--one is at once singular and replaceable, for instance, trapped in a place at once fated and contingent--leads one to large, intractable literary and aesthetic questions (character, psychology, social embeddedness, ethics). Readings will include texts from many historical periods, fields, and genres: philosophy, psychoanalysis, novels, poems, opera, film, for example.

ENGL420101  
Science Writing  
Sutton, Sarah C  
Spring 2022  
From driverless cars to gene therapy to cryptocurrency, the latest scientific and technological breakthroughs promise to transform life as we know it. When science moves from the laboratory, to corporate boardrooms, to news headlines, and into our daily lives, writing is involved in every step along the way. In this course, we will read works created by and about scientists, and explore how science circulates through society via social media and blog posts, traditional media, and government policy making. We'll also examine how companies communicate with the public via press releases, the media, and advertisements. In written and oral assignments, students will practice the skills essential for success in writing about science-- researching and reporting, interviewing scientists, pitching new ideas, understanding audience expectations, and clearly communicating essential knowledge. Students will have multiple opportunities to conceive, draft, revise, and complete writing projects tailored to diverse audiences. This course aims to help students understand and explore science writing as a career--including opportunities in media, research labs, university news offices, museums, science and technology focused companies, and many other venues.

ENGL430101  
Outcast Ireland: Paupers, Penitents, Patients Smith, James M  
Spring 2022  
This course considers the roles played by institutions in Irish society since the formation of the State (1922). We study the history of institutional provision, both as a legacy of empire and an apparatus of social control throughout the twentieth century, e.g., Industrial Schools, Magdalene Laundries, Mother and Baby Homes, and "Mental Hospitals." We examine legislation and social policy informing social phenomena contained by these institutions, e.g., poverty, illegitimacy, single motherhood, deviancy, illness, etc. We analyze how literary and

cultural representations (e.g., fiction, drama, poetry, film, memoir, journalism, and testimony) contribute to making visible aspects of Irish society typically hidden from view. And, we evaluate the significance of human rights advocacy campaigns, survivor organizations, and the State's response to demands for justice, redress, and memorialization.

Topics in Creative Nonfiction: Writing for Magazines Rotella, Carlo

Spring 2022

In this advanced creative nonfiction writing course we practice and study the craft of magazine writing. We will write and read a variety of articles features, profiles, reviews, columns, essays, etc. And work on professional skills, such as pitching a story and interviewing. We will also consider models provided by accomplished journalists, by reading their work and by having them in for class visits. A variety of writing assignments, workshopping of student prose, and discussion of assigned reading are regular features of the courses workload. Admission to this course is by permission of instructor on the basis of manuscript submission. Please submit up to 8 double-spaced pages of writing, which can be an entire piece, part of a longer piece, or a compilation of shorter ones. You can explain the nature of what you have submitted in an accompanying note, and please also list any writing workshops you have already taken.

Be sure to include your name and email address. Materials should be submitted to Carlo Rotella via email (rotella@bc.edu) before the date on which registration for the next semester begins.

Students will be promptly notified by email as to whether they have been admitted to the course.

Writing Workshop: Poetry Roberts, Susan A

Spring 2022

The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

Writing Workshop: Fiction

Boucher, Christopher G Spring 2022

Enrollment limited to 15.. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

Uncanny Fiction DEPT

Spring 2022

This is a writing workshop.. How does an idea develop into a story? What makes a character come alive? Why is setting important? These are a few of the questions this course will explore by considering fiction that contains an uncanny or mysterious element. That uncanny element might be something seemingly supernatural; it might be a psychological state, a surreal event, or simply a weird detail that throws an "ordinary" day off-kilter. We will be focusing on character, framing, action, plot, and narrative perspective, among other aspects of fiction, by examining stories by professional writers and in workshop discussions of student writing.

Irish Gothic Howes, Marjorie E  
Spring 2022  
Ghosts and vampires, lunatics and criminals, human corruption and supernatural punishment: these things have fascinated generations of Irish writers and readers. This advanced seminar will investigate why Ireland produced such a rich tradition of Gothic literature, beginning in the early nineteenth century and continuing right up to the present. We will also explore various critical and theoretical approaches to the genre: political, historical, psychological, sexual, and religious. Writers to be studied include Maria Edgeworth, Sheridan LeFanu, Charles Maturin, Bram Stoker, Oscar Wilde, Elizabeth Bowen, and Patrick McCabe. Formerly Titled: Advanced Topic Seminar: Irish Gothic

ENGL491501 Advanced Fiction Writing Workshop Graver, Elizabeth  
Spring 2022  
Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. The Advanced Fiction Workshop provides encouragement, practice, and criticism for students who have demonstrated accomplishment in writing fiction. The workshop format demands self-motivation and universal participation. Since students stories are texts for class discussion, a generous willingness to respond to others writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome. Admission is by writing sample. If you are interested in an intensive writing process with like-minded peers, please apply! Students should send up to 8 double-spaced pages of creative writing to elizabeth.graver@bc.edu by 10/21. Your submission may be part of a larger piece; if so, indicate this on the manuscript, along with a paragraph explaining your interest in the course and a list of other college level writing workshops you have taken, with instructors and grades. Ideally, the writing sample will be fiction, but if your strongest writing is in creative non-fiction or poetry or drama, that is also acceptable, though prose is encouraged. Include your e-mail address. Late applications will be considered on a rolling basis as space in the class permits.

ENGL491701  
Advanced Poetry Workshop Matson, Suzanne M  
Spring 2022  
Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. This is a workshop for those who already have some experience writing poetry, and who wish to work intensively on matters of craft and revision. Students will produce roughly two poems a week, responding to each other's drafts in workshop discussion. Though the bulk of class discussion will be about student writing, some class time will be devoted to a discussion of useful models and what they can teach us about strategy and craft. Short in-class exercises will be given weekly as prompts to begin the writing process. In ongoing consultation with the instructor about which poets might interest them most, students will devise their own reading list of contemporary poets and keep a response journal. In at least two half-hour conferences over the semester, each student will be given individual feedback on revisions. The final project will be a chapbook of at least 12 revised poems produced over the semester, culled from around 25 drafts produced in and out of class. Admission is by writing sample. If you are interested in an intensive writing process with like-minded peers, please apply! For application to Advanced Poetry Workshop (ENGL491701), send 4 poems to Suzanne Matson (suzanne.matson@bc.edu) by 10/21. Late applications will be considered on a rolling basis as space in the class permits.

ENGL551301  
American Studies Senior Seminar: Transnational American Studies Klein, Christina  
Spring 2022  
This seminar offers a deep dive into the transnational wing of American Studies. Instead of taking Americas borders as the limit of inquiry, we will explore the cultural history of Americas relationship with the world beyond its borders specifically Asia from the 18th century to the present. Our focus will be on the relationship between the material conditions of American and Asian life (political, military, economic, social) and the production of diverse forms of culture (household goods, dance, movies, performance, propaganda, etc.). The seminar culminates in a substantial research paper about a cultural artifact of your choosing.

ENGL552201  
Capstone: Creativity and Self Roberts, Susan A  
Spring 2022  
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the result in art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland.

Topics in Creative Nonfiction: Experiments in Narrative Adair, Allison C  
Spring 2022

This advanced, cross-genre workshop is designed to push the boundaries both of the imagination and of traditional literary categories. Drawing inspiration from hybrid-experimentalists including Ryszard Kapucinski, Natasha Trethewey, Theresa Hak Kyung Cha, Italo Calvino, Robert Coover, Simon Schama, and Eula Biss, among others, participants will pursue projects that question the supposed hard lines between fiction/non-fiction, poetry/prose, journalism/personal narrative, and even text/image. Coursework will occasionally take us outside of the classroom--to a robotics lab, an automobile museum, and a stop on the historic Underground Railroad. Assignments will include individual and collaborative exercises as well as extended independent projects developed in consultation with the instructor. Previous workshop experience helpful. Formerly titled: ACNF:Experiments in Narrative

ENGL590101

Seminar: Global Victorians McAleavey, Maia M  
Spring 2022

This course will consider the literature of Victorian Britain from an international perspective. Questions of slavery, empire, commerce, subjugation, tourism, war, and settler colonialism will be central to our purpose. Key texts will include adventure stories, mystery and detective fiction, travel narratives, advertisements, speeches, and poetry. Combining close reading of canonical texts with attention to nineteenth-century writers of color as well as research in historical and visual archives, we will draw our own conclusions about the ways in which the global world of the Victorians influences the world we confront today.

ENGL590201

Seminar: Text/Photograph: Readings for Writers Graver, Elizabeth  
Spring 2022

In this course, you will both study published texts and produce creative writing of your own. Texts will include works of fiction, creative nonfiction and poetry, along with theoretical writing about photography. Students will write frequent short reading responses and writing experiments. Two independent longer projects the first a craft analysis of a work that combines text and photo, the second a sustained piece of creative writing with photos will allow you to go into greater depth. Among the questions we will ask are: How do text and image work together to illustrate, unsettle, contradict or reach towards the unspeakable? How can they open up explorations of memory and post-memory, particularly in relation to historical trauma? How might they unsettle the line between the imaginary and the real and investigate what it means to see and be seen? How can this hybrid form serve as a powerful vehicle to ask questions about injustice, violence, protest, erasure and the body, particularly in relation to race, gender and disability? How do text/image pairings function in our current, image-saturated time? We will attend photographer Martin Parrs 1/27 talk and view his photographs at the McMullen Museum. We will read Claudia Rankine's Citizen, An American Lyric and attend her 3/2 talk. Other texts may include work by Roland Barthes, Anne Carson, Teju Cole, Carolyn Ferrell, Saidiya Hartman, Kathleen Hirsch, Janet Malcolm, Sally Mann and Susan Sontag. Note: This is not an art course where you will be expected to produce original images, though you will be asked to find old photographs and take new ones to use with your writing. Some prior experience with creative writing is recommended.

ENGL590301

Seminar: Human Rights and American Women's Writing Harrison-Kahan, Lori  
Spring 2022

This course focuses on nineteenth- and early twentieth-century American women writers who engaged questions of difference and justice and played pivotal roles in social reform, ranging from movements for women's, labor, and indigenous rights to abolition and racial justice. It will explore how nineteenth-century women used print culture as a forum for political debate and a means of democratic participation as well as the ways that women writers from diverse backgrounds worked within the sentimental tradition and contributed to new developments in literary journalism, realism, and science fiction. Authors include Harriet Jacobs, Harriet Wilson, Ida B. Wells, Pauline Hopkins, Maria Ruiz de Burton, Charlotte Perkins Gilman, Zitkala-Sa, Sarah Winnemucca, and Sui Sin Far.

ENGL603301

Seminar: Eighteenth-Century Prose Fiction Mitsein, Rebekah K  
Spring 2022

Studies of the novel have sought the genres rise in eighteenth-century Britain when, as one old story goes, a new middle class with time on their hands and money in their pockets developed a sudden taste for literary realism and character interiority. Yet, what we think of as the novel was only a fraction of the eras prose fiction. The literary marketplace proliferated with what booksellers called romances, secret histories, adventures, narratives, and tales moral, oriental, and gothic. Eighteenth-century readers (and writers!) read them all. In this class, we will consider the eighteenth-century novels usual suspects (by Daniel Defoe, Samuel Richardson, Henry Fielding, Laurence Sterne, and Jane Austen) alongside works that challenge the novel as a tidy category (by Penelope Aubin, Eliza Haywood, Sarah Fielding, Samuel Johnson, and Charlotte Lennox). How does broadening the way we understand eighteenth-century reading culture change our ideas about where novels came from, how narrative works, and what fiction can do?

ENGL603401

Seminar: British Romantic Poetry Richardson, Alan  
Spring 2022

In this course we will read and discuss the poetry of Burns, Blake, Barbauld, Wordsworth, Coleridge, Byron, Shelley, Hemans, Keats, Clare, and Landon. In addition to reading a few essays in literary criticism and theory by the poets themselves, we will consider a variety of critical perspectives, including formalism (the study of poetic and other literary devices and structures) and other approaches, such as feminism and the New Historicism, that bring out the cultural, social, and historical contexts of the poems. This course satisfies the Pre-1900 requirement and the Seminar requirement for English majors. Graduate/Undergraduate Course.

ENGL702501

Imagining Race and the Environment Song, Min  
Spring 2022

Fulfills the graduate theory requirement. Starting in the nineteenth century in the United States, the great outdoors implicitly and explicitly became racialized. It was whites (but not all whites) who could turn to the outdoors as a source of leisure and repair, while for others it was a place of danger, exclusion, work, or where they became ornaments. This course explores critical writings and creative works with an emphasis on theory that seek to reimagine nature, the wild, the human, and the outdoors to center the perspectives of Indigenous, Black, Asian, and Latinx peoples.

ENGL702601

Aesthetics: Philosophy, Politics, Art Lehman, Robert S  
Spring 2022

Fulfills the graduate theory requirement. This course will be a discussion-driven survey of aesthetics--that subdiscipline of critical thought that attempts to answer the fundamental questions of what art is and what role it plays in our lives. Over the course of the semester, we will likely read texts by philosophers and critics including Immanuel Kant, Paul de Man, Arthur Danto, Stanley Cavell, and Jacques Rancire; and we will consider works by writers and visual artists such as Marcel Duchamp, Andy Warhol, Alexander Kluge, and Ben Lerner. Specific topics to be addressed will include: the relationship between subjective and objective claims about beauty; the connection of aesthetic experience to political activity; the challenge of modernism to classical standards of taste; and the so-called end of art. This class should be of interest to students of literature, music, visual art, and philosophy.

ENGL702701

Inhabiting Narrative Tanner, Laura E

Spring 2022

This class will explore the way that different narrative forms, including the novel, the short story, film, photography and graphic memoir, capture the rhythms of consciousness, emotion, habit, spatial orientation and embodiment. Focusing on the tension between everyday experience and heightened moments of crisis or insight, we will consider how narrative captures the elusive and complex dynamics of embodied subjectivity through voice, image and form. We will focus on narratives of the last century, including literature by Faulkner, Hemingway, Morrison, Robinson, and DeLillo, films including *Lost in Translation*, *Rachel Getting Married* and *What Maisie Knew*, and photography collections by Shelburne Thurber, Nicholas Nixon and Andrew Moore. We will contextualize these works with snippets of narrative theory, phenomenology, and everyday life theory.

English Language Training for Graduate Level Students: Focus on Writing Anderson, Lynne C

Spring 2022

Designed for those whose first language is not English, this course offers students practice writing in a range of academic modes including reflection, summary, analysis, and critique. Early in the semester, students will explore the composition process from brainstorming to drafting to revision to editing. Grammar is taught in the context of student writing. Several classes will be devoted to e-mail, reference letter, and proposal writing. Non-credit, offered free of charge by GSAS to its students during the spring. Department permission required. Students who enroll in the course are expected to attend all classes and complete short writing assignments weekly. The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

ENGL770601

English Medieval Romance: Difference and Desire Stanton, Robert G

Spring 2022

This course reads romances as nostalgic expressions of desire: for readable national pasts, authorizing foundation myths, satisfying fantasies of gender relations. Complex questions of audience (such as the relation between "popular romance," a perceived lower/middle class, and high-status aristocratic and French texts) and cultural relations (Saxon and Celtic traditions jostled with French literary models as English re-emerged after suppression under the Normans) will help us characterize the social and political force of the genre(s). We will examine questions of gender construction, class irritation, desire for origins, and the limits of the romance genre, deploying mythology, postcolonial criticism, and orality theory.

Readings in Theory Newmark, Kevin Spring 2022 Conducted in English

Spring 2022

Open to undergraduates with permission of instructor only

Fulfills a Ph.D. requirement in Romance Languages and Literatures. This course is organized as an introduction to the reading of literary theory for graduate students in various disciplines. Its aim is to develop an awareness of and sensitivity to the specific means and consequences of interpreting literary and extra-literary language today. The course allows students to acquire a basic familiarity with some of the most formative linguistic, philosophical, and anthropological antecedents underpinning any attempt to understand and account for the special status reserved for rhetorical language in literature or beyond it. Readings from Saussure, Lvi-Strauss, Jakobson, Barthes, Lacan, Ricoeur, Geertz, Austin, Derrida, and de Man, among others.

Issues and Methods in American Studies Klein, Christina

Spring 2022

This course offers an introduction to the field of American Studies, which focuses on the interdisciplinary study of American culture. We will read a range of recent scholarship, exploring diverse approaches, methods, and issues of interest. In the process, we will assemble a "tool kit" of critical skills for making interpretive arguments about works of culture in their historical moments. The cultural forms we analyze may include popular fiction, film, music, painting, and material cultures. Students write a research paper on a cultural artifact of their own choosing.

ENGL827501

Capstone: Digital Humanities as Public Scholarship Lehman, Brittany;Naglak, Matthew

Spring 2022

Many schools across the United States teach different versions of survey classes for which instructors have to reach outside their own focuses. To do so, those instructors often search for visualizations of historical change, literary development, and examinations of religious networks, depending on the field and course. In this capstone, graduate students will develop projects within their areas of specializations to produce digestible digital exhibits, visualizations, and more that can be made freely available to scholars across the world. The goal would be to promote the free exchange of high quality information and digital sources available in the public domain. Furthermore, through the capstone, students should understand the process of a project from conception to presentation. They should have developed skills engaging metadata, transcription, the process of digitization, and more. Students can bring their own research data from their dissertation project or from previous coursework, or they can be provided with a historical or literary dataset from the Boston College Libraries to utilize over the semester. There are four phases to the class, beginning with performing an environmental scan and writing a proposal for their project. In Phase II and III, students will implement and carry out their projects. Finally in Phase IV, students will engage in peer consulting and prepare their work for online publication.

ENGL882501

Composition Theory and the Teaching of Writing Mathieu, Paula

Spring 2022

This course is designed to (1) prepare graduate students to teach introductory, college-level writing courses; (2) introduce students to central issues, problems, and theories in composition studies; and (3) encourage students to examine the interanimating relationship between critical theory, practical writing experience, and the teaching of Composition/Rhetoric. Though the emphasis is on central, nuts-and-bolts tasks in the teaching of writing (e.g., designing assignments; responding to student essays; selecting texts for discussion; etc.), this is not a prescriptive "how to" course; students are asked to consider pedagogical issues and choices in composition studies from a variety of personal and theoretical perspectives.

ENGL990401

Ph.D. Seminar: The City in Literature and Film Rotella, Carlo

Spring 2022

This PhD seminar examines how novels, films, and other forms have engaged the interlinked formal, social, and conceptual problems and possibilities offered by cities. We will concentrate, in particular, on thinking about ways to connect interpretive readings of texts to the histories and defining qualities of cities. Areas of emphasis will likely include the fit between textual form and urban form, how different genres exploit classically urban processes such as development and urbanization, neighborhood stories as regionalism, and the role of popular formula in both addressing a historical city and imagining a fictional one. Primary texts will be mostly American and 20th century--from *Sister Carrie* to *Blade Runner*, *The Custom of the Country* to *Chinatown*, *The Street* to *Do the Right Thing*--but there will be room to read and write about other literatures and periods, depending on your own areas of interest.

Society and Environmental Transformations Thombs, Ryan P

Fall 2021

Where do contemporary environmental problems come from? Why is it so hard to resolve serious global environmental issues? Are environmental problems really social problems? This course will compel students to explore these questions, to devise answers to them, and to learn how to understand environmental problems with sociological analytical tools and methods.

Students will explore the historical origins of the contemporary world, revisit the social and environmental changes brought about by the Industrial Revolution, the World Wars, and the liberalization of capitalism, and, through first-hand research, ponder how globalization might be the start of a new environmental transformation for society.

This Land is Your Land: U. S. Environmental History Valencius, Conevery B

Fall 2021

How have different environments, places, and resources shaped American history? We will survey main themes and events in the environmental history of the United States. We move from colonial-era differences in land use through contemporary environmental debates. We ask how American communities have used, defined, and fought over places and natural resources, from bison herds to nuclear stockpiles. We investigate intriguing aspects of our local Massachusetts environment: the Emerald Necklace of parks, the brass hoof prints of Harvard Square, even our nearby reservoir. No background in history is necessary to thrive in this class. Students in the sciences are welcome.

The State of Affordable Housing in the States Van Meter, Robert H

Fall 2021

Course offered for Sophomores only.. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

ENVS331501

Sustainable Agriculture Stelmasyk, Julianne Fall 2021

Over the past 50 years, the industrial agriculture complex has led to amazing increases in grain yields which has met the basic calorie needs of much of the world's population. However intensive production practices have come at a high environmental and social cost and climate change now presents many new challenges to farmers. A new approach to food production is needed one that not only restores the ecosystem services on farmland and reduces fossil fuel inputs, but also one that supports farm families, builds communities of cooperation, and promotes human health. This course explores the historical basis of agriculture, the concept of sustainability, the agricultural practices that lead to improved ecosystem services, and alternative marketing approaches and cultural relationships. Students will come away from this course with an in-depth understanding of what sustainable agriculture is and how it can be applied to various situations in the world.

Marine Conservation Science Offen, Vena

Fall 2021

This course explores the threats to marine diversity, and the ways in which we can preserve diversity. Covering principles from marine science, ecology and conservation biology, we ask what role does diversity play in marine ecosystems, and what are the consequences of diversity loss to ecosystem function and services. We investigate major threats to marine diversity including marine pollution, species invasion, commercial fishing, and climate change impacts.

Through review of the primary literature and guided discussions, students learn about conservation efforts at the local, national and international levels, with emphasis on marine protected areas and fisheries management.

ENVS334001

Alternative Energy Krones, Jonathan S Fall 2021

Modern civilization relies upon energy to support nearly all aspects of social and economic activity. Historically, this energy has come from fossil fuels (coal, oil, and natural gas).

Important questions concerning the availability and societal and environmental impacts of these energy sources have contributed to an increasing interest in the development of alternative energy technologies (e.g., solar, wind, geothermal, biomass, tidal and wave).

Through an interdisciplinary lens, this course will explore the dynamics of the current energy transition with a particular focus on sustainable energy systems and alternative energy resources. Students will be introduced to quantitative, engineering methods for energy modeling and technology selection in the context of the economic, political, and environmental dimensions of both conventional and alternative energy resources.

Environment and Public Health Kumar, Praveen

Fall 2021

This course is designed as a seminar to give students an introduction to the field of environmental public health. The course will explore current and fundamental literature of environmental health (EH) science. We will also discuss the disproportionate burden of EH problems on vulnerable communities in the U.S. and around the world. Major topics will include air and water pollution, global sanitation and waste, toxicology, pesticides, food security, and climate change. The course has a strong emphasis on environmental justice and on the global health impacts of our environmental footprints. Students will learn about the debates and issues foregrounding the need to view ecology and human society as a whole in order to understand and prepare for these changes. The course emphasizes evidence-based approaches for arriving at program strategies and policy recommendations to improve environment health response for the most vulnerable. A significant thrust of the course will be to enable students to think of policy and programmatic approaches to communities vulnerable to environmental and climate variability.

Fall 2021

This course examines challenges and controversies associated with the unequal distribution of environmental hazards across communities. Students will explore the social, industrial, and government forces that create inequitable burdens of environmental pollution as well as movements to reduce such burdens. While a majority of the course will focus on the United States, readings will include cases from around the world. Students will be expected to actively contribute to class discussions and to complete a pilot research project on the environmental justice implications of an area of everyday consumption such as food, clothing, cleaning, transportation, or technology.

ENVS335601

Seminar in Environmental Law Fowley, Jeffrey T

Fall 2021

This is a seminar intended for undergraduates interested in environmental law and policy. It covers selected topics in depth and thus is a good supplement to the introductory Environmental Law and Policy course, although the introductory course is not a required prerequisite. Topics covered include: (1) the Clean Water Act and the Boston Harbor cleanup; (2) the RCRA hazardous waste regulations; (3) contaminated (both superfund and brownfield) site cleanups; and (4) sustainability/toxic use reduction efforts by businesses. This course will emphasize the practical aspects of environmental law and policy including learning how to read and understand environmental regulations and permits, and will include several written exercises. This course is open to seniors, juniors and sophomores.

Research Methods in Environmental Studies Satcher, Lacey

Fall 2021

For Environmental Science majors and minors only.. The course is designed to prepare majors and minors in Environmental Studies to pursue a senior thesis or seminar research project. The course helps students develop a research question from their interest and curiosity in an environmental topic. Students are introduced to qualitative, quantitative, and spatial methods that are used in environmental studies research. Students then design a study to answer their specific research question.

Human-Wildlife Conflicts and Co-existence Gross-Camp, Nicole

Fall 2021

This course introduces students to a wide spectrum of wild animal issues and services through an interactive and interdisciplinary lens. The course captures the diversity of both negative and positive interactions between humans and wildlife in rural and urban contexts. The course covers: the ecological, social, and economic significance of wild animal species; interactions between wild, human, and domesticated species that facilitate the spread of zoonotic diseases; the impact of habitat degradation and climate change on wild animal species' geographical range and population; how species are adapting to smaller spaces and altered climates; and the urgency to protect Earth's biodiversity and the ecosystem services they provide. Human-Wildlife Conflicts and Co-existence provides an academic experience that is engaging, interdisciplinary, applied, personal, and inclusive, not just in terms of its accessibility and variety, but in terms of the multi-species perspectives it uncovers.

Place-making in a Post-carbon World: Architecture and Landscape for a Sustainable Future Burns, Jennifer L Fall 2021

Since the rise of steam power in the nineteenth century, the American way of life has been premised upon ever-increasing consumption of fossil fuels in all aspects of our economy, from agriculture and manufacturing, trade and transportation, to communications and computing. In this course, we focus on a single aspect of this carbon-reliant economy, one that centrally and intimately shapes our patterns of life, our energy use, and our expectations of comfort. Focusing on architecture and landscape design, we review the dominant patterns of building and dwelling from before and during the Industrial Revolution in the U.S. We then examine a substantial series of alternative, sustainable strategies for constructing our shelters and their surrounding landscapes.

## Environmental Studies Courses: Spring 2022

ENVS110501  
Society and Environmental Transformations Thombs, Ryan P  
Spring 2022

Where do contemporary environmental problems come from? Why is it so hard to resolve serious global environmental issues? Are environmental problems really social problems? This course will compel students to explore these questions, to devise answers to them, and to learn how to understand environmental problems with sociological analytical tools and methods.

Students will explore the historical origins of the contemporary world, revisit the social and environmental changes brought about by the Industrial Revolution, the World Wars, and the liberalization of capitalism, and, through first-hand research, ponder how globalization might be the start of a new environmental transformation for society.

ENVS170101

Boundaries of Belonging: Geographies of Race and Place in America Wright, Robin Spring 2022

We have control over our identities or do we? We assume that identity means our sense of self, or that it reflects who we are because of our personality and experiences. This description indicates that we have control over our identities but do we? Identity is not just individual, it is also collective because it denotes social markers like race, gender, sexuality, language, and religion. Focusing on race, these paired courses explore the ambiguities and tensions between individual and collective identities, as well as how racial identity formation in the U.S. is mediated by outside forces. Key topics will include how space and place mediate racial identity, but also how racial discourse recycles racist ideas to predetermine how racial groups can be seen, known, and imagined. By surveying literature, film, and music while interrogating concepts like mobility/containment, inclusion/exclusion, and belonging/alienation, we will see how people have created and contested the boundaries of racial and spatial divisions across the U.S.

ENVS332801  
Global Environmental Justice and Conservation Gross-Camp, Nicole D Spring 2022  
The concept of environmental justice - that nature is not only found in wilderness, but also in the places where we live and work - revises our understanding of environmentalism to include both National Parks and nuclear waste sites, wild rivers and mega-dams. The literature on environmental justice provides narratives of individuals and communities organizing and responding to economic and environmental problems on local, national, and international levels. Its stories and investigations show that environmental issues are deeply connected with issues of globalization, gender, race and class. In this deeply interdisciplinary course, we will explore the concept of global environmental justice within the context of conservation; reflecting on the historical foundations of conservation and increasing attention to 'just' conservation. By the end of this course, you will have been exposed to ways in which environmental justice connects to issues of ethics, social justice, civic engagement, and, hopefully - your own life.

ENVS356201  
Environmental Sociology I Jorgenson, Andrew K Spring 2022  
This is a reading and discussion seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of theory and research that are national, international, and global in scope and research that is structural in orientation, with a key focus on how large-scale social institutions and organizational forms impact the environment, and also how they shape the ways in which individuals and smaller groups interact with the natural environment. Attention is also given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science.

ENVS494301

Environmental Seminar Gross-Camp, Nicole D Spring 2022

This seminar is for seniors who are minors in the Environmental Studies Program. With the goal to serve as a bridge between the college experience and the next stage of one's career, students fine-tune their critical writing, research, project coordination, facilitation, and public speaking skills. We investigate, actively discuss, and write about contemporary environmental issues and solutions with the aid of weekly reading assignments and the knowledge and experiences each student brings to class. Students also engage in a semester-long research project, collaborating with a campus or community mentor organization to address a specific environmental problem.

Environmental Seminar Gross-Camp, Nicole D Spring 2022

This seminar is for seniors who are minors in the Environmental Studies Program. With the goal to serve as a bridge between the college experience and the next stage of one's career, students fine-tune their critical writing, research, project coordination, facilitation, and public speaking skills. We investigate, actively discuss, and write about contemporary environmental issues and solutions with the aid of weekly reading assignments and the knowledge and experiences each student brings to class. Students also engage in a semester-long research project, collaborating with a campus or community mentor organization to address a specific environmental problem.

# Film

## Film Courses: Summer 2021

FILM227802

Film, Literature and Law DEPT

Summer 2021

Interest in the rapport between film and literature as it relates to the law intrigues us as much today as ever. Literature captures the drama of a legal trial or an investigation into a brutal, racial murder. Film then takes this rich material and shapes it into a compelling form with dynamic visuals and other narrative techniques. The course explores the power of story-telling and the impact of film to embody and inhabit law and its relationship to ideas about inferiority, liberty, citizenry, race, justice, crime, punishment, and social order. Film adaptations from short stories, plays, and novellas will comprise the body of the curriculum.

FILM220201

Introduction to Film Art Long, Carter E

Fall 2021

The basic course introduces essential concepts of film techniques, history, and criticism and supplies the background for more advanced work in film studies. It provides some familiarity with the artistic, economic, technological, and social factors that exerted an influence on the development of the medium and the industry to its present influential role in cultures today. Critical reading and historical research lead to active viewing and to precise written and oral evaluations of individual films.

FILM221101

Russian Cinema Epstein, Thomas Fall 2021

This survey of Russian cinema will focus on the development of the seventh art in Russia and the former Soviet Union from 1913 to 2017. Focusing on the films and theoretical writings of three canonic Russian film makers (Sergei Eisenstein, Andrey Tarkovsky, and Andrey Zvyagintsev), we will also explore film theory outside Russia and watch other individual Russian film masterpieces, some at the margins of the canon. While film artistry will be at the center of our attention, Russian and Soviet history of the period will also be explored. We will screen our films on Tuesday evenings, hold class on Wednesdays.

FILM300501

Italian Cinema: Passion, Politics, and Pain Michalczyk, Susan A

Fall 2021

Social issues dominate Italian cinema from the post-WWII era to the present, as filmmakers interpret individual historical moments, literary works, and cultural events, bringing a collective experience of the human condition onto the screen. Visconti establishes the foundation that Fellini, Bertolucci, Rosi, and other directors build upon, creating visual images that evolve from Giovanni Verga, and his written portraits of verismo. Exploring what is true and real, questioning the complexity of the human condition in moments of comedy and tragedy, these films depict socio-economic, philosophical, and political issues, always revolving around the vulnerability and struggles of relationships. Films include:La Terra Trema, Ossessione, Open City, Bicycle Thieves, La Strada, Il Conformista, Tree of Wooden Clogs, Bread and Chocolate, Life is Beautiful, Tre Fratelli, Cinema Paradiso, Bread and Tulips, Gomorrah.

FILM330101

Screenwriter Shatraw, Justin Fall 2021

This course will explore the role of the screenwriter in the film making process, from original idea to the finished screenplay and film. Students will also learn how the screenwriter adapts source material such as plays, novels, and real life events. Along the way, students will learn about each of the elements of screenwriting including: structure, character, dialogue, theme, genre and breaking rules. Both individually and as a classroom project, students will read

screenplays and analyze the resulting films to gain a better understanding of how those elements work in combination and contribute to the finished product.

FILM330301

Advanced Screenwriting Conroy, Mary K  
Fall 2021

Limited to 15 students. This course is for students interested in writing for film, applying the knowledge gained in FILM3301 toward their efforts at writing their own screenplays. In the early part of the class, students will select an idea for a film and transform that idea into a story suitable for the screen. From there, in a round-table setting, students will complete a series of exercises to help them focus their stories, eventually moving on to writing a finished first act (28- 30 pages) by the semester's end.

FILM331401

Cinema of the Greater Middle East Berger, Pamela  
Fall 2021

Cinema shapes the way we view a culture, but in order for a film to reveal that culture, we must view the film with an understanding of the context in which it was created. In this course we will look at several films from the Greater Middle East and study their artistic aspects as well as the cultures within which they were shot. We will also explore the various points of view of the filmmakers and look into how the scripts and the shooting styles serve to accomplish their goals.

FILM332501

The Comic Film  
La Rocca, Joseph P Fall 2021

Laughter is a universal phenomenon seen widely in films from the birth of cinema in Lumiere Brothers pranks on screen in 1895 to the current spoofs and mockumentaries. This class will trace the evolution of comedy in film from the early silent films (Chaplin), through intellectual comedy (Woody Allen), to the most recent comedies on screen today. The survey will analyze the psychological and sociological essence of comedy in its various forms from slapstick and situational comedy to word-plays and clever one-liners.

FILM336201

Film Theory and Criticism Pastel, Renee L  
Fall 2021

Satisfies the required theory course in the Communication major This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal

level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

FILM338301

Film Criticism and Theory Michalczyk, John  
Fall 2021

In essence, we become film critics when we explore our opinions about a film in light of the plot, characterization, dramatic tension, etc. As an art form, film criticism emerged on a large scale following release of the controversial film Birth of a Nation (1915). Today film critiques are found in our daily newspapers and weekly journals. This course will continue the process through the screening and discussion of primarily independent films. Students will read extensive critiques and theory, while developing sharp critical and writing skills.

FILM338901

American Directors Series Chopra, Gautam  
Fall 2021

This series will concentrate on several directors who have chosen to work on the East Coast rather than in the Hollywood mainstream, such as Martin Scorsese, Spike Lee, Sidney Lumet, Elia Kazan and Woody Allen. Many have roots in New York and use the City not only as a setting for their narratives but as a metaphor for the human condition they explore. This school of Urban Realism has enriched American film with a gritty documentary strain that stands in strong contrast to the polished Hollywood style.

Coming of Age: Crisis and Calm Revealed through Film Michalczyk, John  
Spring 2022

Core Renewal: Enduring Questions For Freshmen Only Coming of age, whether in moments of conflict or peace, remains a central theme in both classic and contemporary films. Film adaptation offers opportunities to study issues confronted from early to late adolescence that affect our adult lives. Viewing moments of crisis and calm through the medium of film has aesthetic value and promotes increased visual and cultural literacy. The films serve as foundational texts, as students engage in understanding the complexities of adapting a singular account of adolescence from printed word to the screen so as to reveal the relevance for our own lives.

FILM228201  
Political Fiction Film Michalczyk, John Spring 2022

Political fiction film has often served as a dramatic means to deliver an ideological message. Its roots go back to Griffith's Civil War epic Birth of a Nation (1915). During World War II with

such popular films as Casablanca, Hollywood directors offered patriotic messages to an American audience with its recent history of isolationism. More recently, Costa-Gavras' Z (1969) combined thriller elements with a non-conventional political perspective. Through readings, screenings, and discussion of these and other works, we are able to analyze the dual components of drama and politics in a chronological manner.

Jewish Media, Arts, and Culture Sienkiewicz, Matthew S

Spring 2022

Satisfies one of three elective courses required within the Communication major This course looks at current trends in Jewish cultural creativity, considering both diasporic and Israeli film, television, literature, and visual arts. Designed for students with limited knowledge of Judaism and Jewish culture, the class surveys Jewish religious practice, political history, and traditions of cultural expression as it examines media sources that embody, advance, and grapple with ideas from the Jewish past and present. Topics include, but are not limited to, Jewish comedy, Jewish children's media, Jewish memory, the globalization of Israeli television, and Yiddish language media.

FILM229501

Latin American Film and Media Livon-Grosman, Ernesto

Spring 2022

The purpose of this course is to explore how contemporary Latin American film and other audiovisual media have approached the subject of representation in both documentary and narrative cinema. We will focus broadly on two themes and four decades: the relationship between art and politics and how film and other media represent the connection between history and personal narratives from the 60s to the 2000s. Analyzing the cinematographic and editing techniques as well as reading critical texts on film and Latin America we will discuss how different media construct a narrative and how they influence the representation of history. Film in Spanish and English with English subtitles. \*\*Satisfies one of three elective courses required within the Communication major\*\*

From Script to Screen Shatraw, Justin Spring 2022

Screenwriting is a visual medium, so the best ideas often come from pictures in the writer's mind. This course focuses on the props, sets, locations, actions, cinematography, editing, and other visual elements that translate words on a page into worlds of light. By looking at scripts and films, we'll analyze the process of reading words as images.

FILM333101

Independent American Film Chopra, Gautam

Spring 2022

How might contemporary independent cinema be seen as both an alternative and a response to mainstream Hollywood fare? How has the acquisition of indie studios, such as Miramax and New Line Cinema, transformed the industry? Has the affordability of technology and accessibility of audiences truly created a democratization of film? This course emphasizes critical examination of contemporary American Independent film from the 1980s films of John Cassavetes, Steven Soderbergh, Spike Lee through the 1990s and 2000s with features from Kevin Smith, Allison Anders, Richard Linklater, Quentin Tarantino; shorts from Wes Anderson and Jane Campion; and current festival hits.

Advanced Screenwriting II Conroy, Mary K

Spring 2022

Limited to 12 students.. In a round-table setting, students will continue to work on the script they began in Advanced Screenwriting. The course will feature more exercises and outlining, leading to the writing of the remainder of their script. As in Advanced Screenwriting, students will critically examine each other's exercises and writing under the guidance of the professor. It is anticipated that students will complete a finished first draft of a full length feature film (100- 120 pages) by the semester's end.

FILM445701  
From Word to Image: In Search of the Essay Film Livon-Grosman, Ernesto  
Spring 2022  
This course will look at the essay film from the 1950s to the present. Through the history of the essay as a genre and its cinematic life, we will examine those films that bring together text and image as well as the private and the public. During this writing-intensive course, we will follow the thread that connects all the elements of the essay as a genre. We will discuss essays by Montaigne, Theodor Adorno, Timothy Corrigan, and Norah Alter and the films of iconic filmmakers such as Chris Marker, Nicolasito Guilln Landrin, Albertina Carri, Harun Farocki, and Agnes Varda, among others. How are those films shaped by constantly changing social circumstances? What do they tell us about the social and political conditions in which they were made? And how do they relate to other film practices around the world? In addition to the critical readings, the students will watch movies outside class time. Films in multiple languages always with English subtitles. \*\*\* Satisfies one of two writing intensives courses required within the Communication major. Restricted to Juniors and Seniors\*\*

Narrative and Identity: The Story You Tell Yourself Newmark, Kevin

Fall 2021

Conducted in French

Fulfills one of the 3000-level requirements for the French major. Satisfies Foreign Language Proficiency core requirement.. This course is designed to help students with a good background in French to progress to the next level. Students in this course will continue to solidify their mastery of French grammar through structural exercises tied to readings, discussion, and written analysis of selected short stories, novels, and narrative film. The stories have been chosen and presented to allow students to progress substantially both in their basic reading skills in French and in their awareness of critical aspects of storytelling such as narrative voice, point of view, and plot structure.

#### FREN331001

War/Twentieth-Century France Breines, Joseph

Fall 2021

Our focus this semester will be on the artistic, intellectual, political, and social life of France during the period of the Second World War. We will be reading poetry and short stories published during the Occupation, recent magazine articles on the clandestine press, an anti-war play from the immediate pre-war period, essays published just after the Liberation, and very short selections on the history of the period. We will see a number of recent French films whose stories draw on the dynamics and psychology of resistance and collaboration. We will hear recollections of the Liberation of Paris, interviews with men who joined the Charlemagne division of the German "SS," and songs from the period. While the main focus will be on the Second World War, we will begin the course with two texts (a short story and a poem) written just after the Franco-Prussian War (1870-71).

Credits: 3

Room and Schedule: Lyons Hall 315 MWF 12:00 Noon-12:50PM Satisfies Core Requirement: None

Life at the Limit: Narratives of Transformation Kearney, Anne D

Fall 2021

This course is conducted in English.. This course is conducted in English. This course will consider texts that follow the path of a person making a journey from alienation, loss, or hardship through a turning point. We will read stories of people who, caught in a major life crisis, still manage to keep a deep connection with themselves and the world, people who ultimately survive to share their experience with others in writing. Students will read correspondence between Theo and Vincent Van Gogh, a short story by Fyodor Dostoevsky, excerpts from Les Misérables, a memoir by Primo Levi, and various texts by Albert Camus and several other authors. Satisfies Core Requirement for: Literature

French Poetry of the Renaissance Bold, Stephen

Fall 2021

Conducted in FrenchFulfills one of the 400-level requirements for the French major or minor This course will focus on the poetic revolution undertaken by Joachim du Bellay and Pierre Ronsard, leaders of the group known as the Pléiade. Their return to classic Greek and Roman sources paradoxically established the standards for modern French poetry through to the twentieth century. Most importantly, we will read some of the most beautiful and most intriguing poems ever written in French.

True Fiction: From Philosophy to Literature Newmark, Kevin  
Fall 2021

Beginning with Plato's allegory of the cave, this course will examine the question of truth and the way it has been addressed in several key texts, at several key moments, in the history of philosophy and of literature. What is the relation between the philosophical concept of truth and the literary modes of fiction in which that concept is often articulated? Readings will include Plato, Descartes, Kant, Kleist, Kierkegaard, Nietzsche, Kafka and Heidegger, among others.

Hearing Colors, Seeing Sounds Yamaguchi, Liesl  
Fall 2021

In this course, we will investigate the nineteenth-century dream of synesthesia: the idea that the senses, far from being distinct, are intimately intertwined. Considering a range of painterly, poetic, fictional, musical, and scientific artifacts, we will study the nature of nineteenth-century synesthesia, as well as the feeling body that it implies. Over the course of our inquiry, we will consider works by, among others, Charles Baudelaire, Richard Wagner, Honoré de Balzac, Thophile Gautier, Arthur Rimbaud, Stéphane Mallarmé, and J.K. Huysmans. Conducted in French

Narrative and Identity: The Story You Tell Yourself  
Breines, Joseph Spring 2022 Conducted in French  
Fulfills one of the 3000-level requirements for the French major. Satisfies Foreign Language Proficiency core requirement.. This course is designed to help students with a good background in French to progress to the next level. Students in this course will continue to solidify their mastery of French grammar through structural exercises tied to readings, discussion, and written analysis of selected short stories, novels, and narrative film. The stories have been chosen and presented to allow students to progress substantially both in their basic reading skills in French and in their awareness of critical aspects of storytelling such as narrative voice, point of view, and plot structure.  
Credits: 3 Room and Schedule: Lyons Hall 315 MWF 01:00PM-01:50PM Satisfies Core Requirement: None Prerequisites: French CCR II (FREN2210). Students with just four years of high school French or CCR I (FREN2209) may enroll with instructor's permission.

**FREN448201**  
Enfance Capitale Yamaguchi, Liesl Spring 2022  
What is it like to grow up in Paris, City of Lights? In this course, we will explore the French capital in the company of its more youthful residents, accompanying them from their sumptuous apartments overlooking the Jardin de Luxembourg to their colorful-if cramped-quarters in the Belleville and the Parisian banlieue. Through literary texts and a few films drawn from the 19th through 21st centuries, we will study representations of childhood in the French capital, attending particularly to the ways in which childhood experiences are seen to confer, or fail to confer, le capital social--social capital. Topics to be explored include linguistic identity and class formation, education and gender acquisition, evolving structures of discrimination, memory and projection, and the role of language in shaping categories of identity. Conducted in French.  
Credits: 3  
Room and Schedule: Stokes Hall 261S Tu 03:00PM-05:20PM Satisfies Core Requirement: Literature

**FREN448301**  
Twentieth-century French Theater Breines, Joseph Spring 2022  
Conducted in French. This course will study a number of plays written in French during the twentieth century. Authors will include Cocteau, Anouilh, Giraudoux, Sartre, Beckett and Genet. As many of the plays are remakes of Greek tragedies and legends (the Oedipus Cycle, the Trojan War, for instance) we will be posing questions such as: How does one explain the flurry of remakes at this time in France? How are classical notions of causality (Fate, Destiny) transposed in the modern versions? In what ways do the modern plays self-consciously express their status as remakes? Theoretical writings on theater will also be considered.  
Credits: 3  
Room and Schedule: Carney Hall 302 W 03:00PM-05:20PM Satisfies Core Requirement: None

Readings in Theory Newmark, Kevin Spring 2022  
Conducted in English  
Open to undergraduates with permission of instructor only  
Fulfills a Ph.D. requirement in Romance Languages and Literatures. This course is organized as an introduction to the reading of literary theory for graduate students in various disciplines. Its aim is to develop an awareness of and sensitivity to the specific means and consequences of interpreting literary and extra-literary language today. The course allows students to acquire a basic familiarity with some of the most formative linguistic, philosophical, and anthropological antecedents underpinning any attempt to understand and account for the special status reserved for rhetorical language in literature or beyond it. Readings from Saussure, Lvi-Strauss, Jakobson, Barthes, Lacan, Ricoeur, Geertz, Austin, Derrida, and de Man, among others.

German for Professional Purposes Sondermann, Ruth  
Fall 2021  
An introduction to the language and structure of business in the German-speaking countries, this course will focus on daily business practices, on texts related to business in German, and on cultural differences in the German-speaking business world. A semester's work includes the practice of skills necessary to understand and perform basic business transactions (role-playing); the exploration of business in German in different media, such as television and the Internet; and the praxis-oriented expansion of applying the German language in a professional context. Not suitable for native speakers of German.

GERM300801  
German Fairy Tales Old and New Burwick, William  
Fall 2021  
Conducted in English. Counts toward German Major/Minor and German Studies Minor. Perhaps the most quintessential German genre, the fairy tale, or Maerchen, is synonymous with German literature the world over while also having fundamentally changed the course of German literary history since 1800. This course explores the miniature form, its history, and its cultural influence in guises both classic (Jacob and Wilhelm Grimm) and contemporary. Together we will explore the social, cultural, educative, and political functions of fairy tales across the nineteenth, twentieth, and twenty-first centuries and seek to understand the formative role of popular folk literature in the development of German self-understanding. To what extent are fairy tales children's literature? How did their varied but recognizable typologies come about? What place do Volksmaerchen and Kunstmaerchen have in recent German culture? These are but some of the questions we will pose as we traverse this magical literary landscape of ethical conflicts and eerie nightmares. This course is designed as an interactive seminar requiring dynamic student participation.

**GERM200501**  
Germany in Europe today Sondermann, Ruth Spring 2022  
This course is intended to introduce students to today's Germany in Europe. The European Union and the four freedoms of the EU--free movement of people, goods, services, and capital-- will be the chief topic of this course. Other topics will include the new influx of migrants and other demographic changes, the education system, and the opportunities that

education offers. Because Germans are very concerned about the effects of environmental change, the course will also address the idea of sustainability, the sharing and caring society, and Fair Trade. This course is a language course offered to students from all majors who are contemplating a semester abroad, an internship, or even working in Germany. We will be listening to podcasts and the news and will read authentic material. You should therefore be quite confident in your German language skills, be able to discuss and present your opinion and write short essays. If you are uncertain about your level, please do not hesitate to contact the instructor.

GERM216401

Collecting, Order, Displaying Power: The History of the Modern Museum Burwick, William Spring 2022

In this course we will discuss the history and the politics of museums. Our topic will be the formation of modern museums from private collections, eclectic and arcane "Wunderkammern" of the early modern period, 19th century national museums, to the contemporary museums and exhibits. This includes not only what people decided to collect and display, but how people choose to curate displays as expression of cultural and national identity. We also investigate architecture, location, and other relevant special contexts in and around museums. We will discuss both art and natural history museums by focusing on changes in architecture and philosophy of display. We will read Thomas Bernhard's novel *Old Masters* as well as ancillary texts to gain a better understanding of the development of modern museums and the politics that shaped them.

GERM223901

Knights, Castles, and Dragons Resler, Michael Spring 2022

Conducted in English with all texts in English translation. No knowledge of German is required. Counts toward German major, German minor, and German Studies minor.. A study of the masterpieces of the first great blossoming in German literature including *The Nibelungenlied*, *Tristan*, and *Hartmann von Aue's Erec*. Central to the works of this age are (1) the rise of knighthood and (2) the spreading to Germany of the legend of King Arthur and the knights of the Round Table. In addition, older Germanic-heroic influences will be examined in certain of the works. The literature will be discussed in the larger context of its sociological and historical background. The literary traditions of France will be systematically linked to contemporary developments in Germany.

## Hispanic Studies Courses: Fall 2021

SPAN101501  
Elementary Spanish I Moon, Sehyun S  
Fall 2021

Conducted in Spanish. This introductory course is designed for students with no prior Spanish experience as well as those who have had some high school Spanish. Elementary Spanish I provides a strong foundation in speaking, listening comprehension, reading, and writing as well as exploring the products, practices, and perspectives that are unique to Hispanic cultures. This course follows a communicative approach, which springs from the idea that languages are best learned when real-world information becomes the focus of student activities. Students interact in Spanish with the instructor and with classmates. By the end of this course, students should be able to successfully handle in Spanish a significant number of basic communicative tasks.

SPAN101506  
Elementary Spanish I Gonzalez, Maria M  
Fall 2021

Conducted in Spanish. This introductory course is designed for students with no prior Spanish experience as well as those who have had some high school Spanish. Elementary Spanish I provides a strong foundation in speaking, listening comprehension, reading, and writing as well as exploring the products, practices, and perspectives that are unique to Hispanic cultures. This course follows a communicative approach, which springs from the idea that languages are best learned when real-world information becomes the focus of student activities. Students interact in Spanish with the instructor and with classmates. By the end of this course, students should be able to successfully handle in Spanish a significant number of basic communicative tasks.

#### SPAN339301

Spanish-American Philosophy Gurtler, Gary

Fall 2021

This course is designed to give the student an opportunity to look at some fundamental philosophical issues regarding human nature and the origins and development of human thought from a fresh perspective. Unamuno's Tragic Sense of Life presents a critique of the rationalism of modern European thought by focusing on human life as dream, theater, and struggle. Octavio Paz, in The Labyrinth of Solitude, explores the meaning of human existence through the lens, or perhaps the mask, of the Mexican quest for identity at the end of the present century.

Interpretations of State Terror in the Southern Cone Shames, David A

Fall 2021

How is our understanding of the military dictatorships in Argentina and Chile during the 1970s/80s shaped by both 'objective' historical accounts and 'subjective' interpretations of life under these brutal regimes? In this course, students will unpack the legacies of state terror in the Southern Cone through different literary and film interpretations of this period of political violence. Special attention will be paid to the ideological and geopolitical contexts in which state terror took root, the relationships between fiction, memory, truth, and history, and the ways in which interpretations of this period have changed over time.

SPAN662701

Passion at Play Rhodes, Elizabeth Fall 2021

Conducted in Spanish

Counts as pre-1800 Peninsular distribution requirement. In this course, students interrogate the relationship between love and passion, using early modern theater and love poetry as tools. The themes uniting the dramas examined will be love, honor, and death, with particular attention paid to those works in which violence is represented. What would lead a society to sanction such violent behavior in the name of love? To what extent is that definition still ingrained in Hispanic culture and in our own culture today?

Hispanic Nobel Prize Winners in Literature Mizrahi, Irene

Fall 2021

A wide variety of Spanish and Latin American writers have been honored by the Swedish Academy since the first literary Nobel Prize award in 1901. The literary achievements of these authors play an essential role in the development of twentieth-century Hispanic literature. Although all the Hispanic prize recipients will be taken into account, we will concentrate on eight winners spanning the twentieth century, Gabriel Garcia Marquez and Camilo Jos Cela among them. By studying limited selections of their representative works, of different genres, students gain an understanding of linguistic and ideological dimensions responsible for the Nobel award to each laureate. Conducted in Spanish

## Hispanic Studies Courses: Spring 2022

SPAN101501

Elementary Spanish I Lowden, Alicia Spring 2022

Conducted in Spanish. This introductory course is designed for students with no prior Spanish experience as well as those who have had some high school Spanish. Elementary Spanish I provides a strong foundation in speaking, listening comprehension, reading, and writing as well as exploring the products, practices, and perspectives that are unique to Hispanic cultures. This course follows a communicative approach, which springs from the idea that languages are best learned when real-world information becomes the focus of student activities. Students interact in Spanish with the instructor and with classmates. By the end of this course, students should be able to successfully handle in Spanish a significant number of basic communicative tasks.

Credits: 3

Room and Schedule: Stokes Hall 286S MWF 10:00AM-10:50AM Satisfies Core Requirement: None

Prerequisites: This course is for beginners. Students with prior Spanish experience are admitted only after taking the placement test.

SPAN101601

Elementary Spanish II Moon, Sehyun S Spring 2022

Conducted primarily in Spanish Elementary Spanish II is the second course in the first-year Elementary Spanish I and II sequence. It continues to provide a strong foundation in speaking, listening comprehension, reading and writing as well as exploring the products, practices and perspectives that are unique to Hispanic cultures. This course follows a communicative approach, which springs from the idea that languages are best learned when student activities involve critical thinking about real-world information. Students will interact in Spanish with the instructor and with classmates. By the end of this course, students should be able to successfully handle in Spanish a significant number of communicative and writing tasks in different time frames.

**SPAN111510**

Intermediate Spanish I Ochoa, Antonio Spring 2022

Intermediate Spanish I is the first course in the second-year sequence. It continues to develop and strengthen students' proficiency in the Spanish language as well as to increase their cultural understanding. Emphasis remains on the four skills and on critical thinking.

Throughout the course, students develop fluency and accuracy, and focus on communication. They expand their vocabulary and enhance their understanding of essential Spanish grammar concepts. Short literary texts, cultural readings, and audiovisual materials provide opportunities to learn to appreciate cultural differences and impart authentic insight into the Hispanic world.

Advanced Spanish

Meza-Riedewald, Leticia Spring 2022

Conducted in Spanish. Elective for the Hispanic Studies major and minor. Satisfies Foreign Language Proficiency core requirement.. This course will allow students to improve their command of the Spanish language at an advanced level. By activating communicative and discursive strategies, they will be able to achieve a fluent use of the oral, as well as of the written language, emphasizing linguistic correction and adequacy. Students will become capable of appropriately interpreting a wide variety of complex texts and produce descriptive, narrative, expository, and argumentative texts autonomously and efficaciously in the target language. The materials provided throughout the course will incite an approximation to different cultural, political, and social aspects related to current issues of the Spanish-speaking world.

Tradition and Counterculture in Mexico Shames, David A Spring 2022

How can we rethink the global political and economic upheavals of 1960s/1970s through the lens of a clash between tradition and counterculture? In this course, students will explore multiple dimensions of question by taking Mexico as a case study. We will examine the possibilities and dead ends of different countercultural proposals put forth by three paradigmatic figures in 20th century Mexican history: artists, guerrilla insurgents, and economist. We will delve into the cultural and political contexts against which Mexicans were rebelling, and analyze how different sectors of Mexican society approached issues of economic development, utopia, and radical self-expression. Course is taught in Spanish.

#### SPAN664801

Literature of Hispanic Migration in the Americas Beckjord, Sarah Spring 2022

Conducted in Spanish. Fulfills pre-1900 requirement in Latin American literature for Hispanic Studies majors. Elective for Hispanic Studies and Latin American Studies Minors. Focusing on works in Spanish by Hispanic and Latino authors written in and about the territory known today as the U.S., we will investigate the topics of language, identity, and imperial competition, as well as belonging, boundaries, migration, and place. Readings will include works spanning the colonial to modern periods, including representative texts in chronicle, fiction, essay, music, and film. Lectures and class discussions will be devoted to close readings of the texts as well as an appreciation for the historical and cultural contexts in which they were produced, as we seek to grapple with questions of language and culture, coloniality and modernity, transculturation and assimilation in an increasingly global world. Satisfies Core requirement for: Cultural Diversity

SPAN669201

The Gender Games, from El Cid to Almodóvar Rhodes, Elizabeth

Spring 2022

Conducted in Spanish. Fulfills pre-1800 Peninsular requirement for major. . This course, whose title takes a cue from The Hunger Games, analyzes how culture "encourages" individuals to conform to a particular set of gender expectations at a given moment in history. Considering how texts of various genres and media represent what means to be "a man," "a woman," or someone who identifies with both or neither, we will analyze how various art forms respond to established gender norms to support or subvert them, from the Middle Ages through contemporary Spain. Experience with gender analysis helpful but not necessary.

The Gender Games, from El Cid to Almodóvar Rhodes, Elizabeth

Spring 2022

This course, whose title takes a cue from The Hunger Games, analyzes how culture "encourages" individuals to conform to a particular set of gender expectations at a given moment in history.

Considering how texts of various genres and media represent what means to be "a man," "a woman," or someone who identifies with both or neither, we will analyze how various art forms respond to established gender norms to support or subvert them, from the Middle Ages through contemporary Spain. Course conducted in Spanish. Experience with gender analysis helpful but not necessary.

SPAN994101

Literature of the Colonial and Postcolonial Hispanic Caribbean Beckjord, Sarah  
Spring 2022

The literary heritage of the Hispanic Caribbean reflects the crosscurrents of cultural, linguistic, and textual exchange that begin with early European colonial contacts and span the struggles of slavery and independence—as well as the experiences of postcolonial "nations." In this course we will read major texts with an eye to the representation of "race," mestisaje, gender, criollo culture. Critical readings in cultural memory, feminist, and postcolonial theory. Qualified undergraduates admitted with instructor's approval.

HIST105501  
Globalization I DEPT  
Fall 2021

The course explores the world-wide connections that are diminishing the significance of traditional geographical, cultural, and political boundaries. Global connections have increased rapidly in the past half-century, but global convergence has been a powerful force during the eight centuries covered by this survey. The year-long course examines three kinds of globalization: commercial, cultural, and political. While recognizing the Western world's expansiveness as a key force for globalization, the course gives extensive attention to how people from other continents have also been major agents in initiating, promoting, and resisting globalizing forces.

HIST106301  
Latin America in the World I Sellers-Garcia, Sylvia M  
Fall 2021

Anchored in close readings of primary sources, especially the first-person accounts of contemporaries, this core course considers the history of Latin America from the pre-contact period to roughly 1800. It follows the individual, communal, institutional, and national stories of transformation in order to understand how people in this region became Latin American. This course places a particular emphasis on questions of difference and power, considering how race, gender, and imperial structures shaped society. Methodologically, the course aims to highlight the work of interpretation, reflection, and imagination in the practice of history.

HIST170101

Truth-telling in History Sellers-Garcia, Sylvia M Fall 2021

This course examines both the difficulties of finding "truth" in historical documents and the challenges of writing truth about the past. Do any primary sources tell the truth? Does the work of interpretation always result in distortion? Does history, however it may be built on fact, become a form of fictionalizing? We will consider the dilemmas posed by oral history, the expectations of popular and scholarly histories, and the contrasting expectations for works of

historical fiction. The final project will be a piece of historical fiction, a memoir, a popular history, or a similar creative project that wrestles with these issues.

The Worlds of Moby-Dick: What Historical Forces Shape a Book's "Greatness"? Quigley, David Fall 2021

Core Renewal Course: Enduring Questions. As an Enduring Questions course (linked with ENGL1714), this course explores the historical contexts of Herman Melville's Moby-Dick. First published in 1851 as the United States hurtled toward civil war, the novel reflects the cultural, political, and economic fault lines of nineteenth-century America. We will read a range of texts that illuminate the histories of New Bedford, Manhattan, antebellum America, and the globalizing economy of the era.

Geographies of Imperialism: History of Colonization Shlala, Elizabeth H Fall 2021

This is an Enduring Questions course and is open to Freshman only. This course must be taken with THEO1707. . The age of empires is past--or is it? In this course, we examine the enduring ideas of empires and their challengers through the present day, using the lenses of history and theology (Christianity and Islam). Beginning with the traditional geographies of maps, we explore how empires colonized not only territories with physical borders, but also bodies and minds, using race, gender, sexuality, ethnicity, education, laws and institutions. Using the British and French empires in the Middle East and North Africa as case studies, we will identify and question how to overcome the boundaries still imposed on people today.

Encountering Inequalities: The Historical Politics of Inequality Zuniga Nieto, Carlos Gerardo Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take ENGL1731 with this course. How are inequalities normalized, and how might their normalcy be challenged? How did we arrive at our current racial and socioeconomic inequality, and how can we understand this moment in a historical context? How are inequalities normalized, and how might their normalcy be challenged? These paired courses will familiarize students with how power and resistance relate to race, ethnicity, and class. Students will learn to recognize the types and origins of inequalities, as well as their political impacts on U.S. democracy and democracies around the world. Our discussions will focus on the myriad ways civil society and traditional liberal thought create unequal systems and how marginalized communities resist those unequal systems.

War and Peace: History and Literary Truths Eaton, Nicole M Fall 2021

This is an Enduring Questions course and is open to FRESHMEN only. You must take UNAS1715 with this course. How does War and Peace speak through its historical context and as a description of a perennial human situation? War and Peace is a great and massive novel. Its primary subject, the effect of the Napoleonic Wars on Russia, may seem distant from our contemporary concerns. Yet its fundamental questions How shall I live and what is worth dying for? Is war a necessary evil, or something greater, or different? How does our social-historical experience construct our identity? Are as relevant today as ever. Approaching these and other questions from our separate disciplines, we will attend both to the historical and literary context in which War and Peace was written and to the ways it speaks to us today.

The Age of Revolutions

Lyons, Kelly M;Reinburg, Virginia Fall 2021

This course explores the intertwined histories of three revolutions that changed the world: the French, Haitian, and American revolutions. We will learn about old regime societies and states in Europe, empires and colonization, politics, social movements, the slave trade, racism, and the role of ideas in sparking revolutions and carrying them forward into the future.

Throughout the course we will examine large scale social, material, and political forces, as well as the individuals and communities that created or resisted revolutionary change.

HIST180201

The History of the Present Bourq, Julian E

Fall 2021

The world today can appear overwhelmingly complex and chaotic. From Covid-19 to climate change, from political anger to social anxieties to economic uncertainty, we seem carried along by uncontrollable events and forces. We can make sense of confusing times by thinking historically: contextualizing our circumstances and anchoring them within broader storylines. This course situates the present within post1945 global history: terrorism, financial crisis, social media, school shootings, populism and white supremacy, left- and right-wing politics, social movements such as Black Lives Matter and #MeToo, climate change, and the pandemic. How did we get here? What are possible ways forward?

African American History I Miller, Karen  
Fall 2021

This two-semester survey examines the history and culture of African-Americans from the pre-colonial period to the present. The first semester treats the period before the middle passage, the evolution of slave and free society, the development of Black institutions, and the emergence of protest movements through the Civil War's end. During the second semester, the emphases are placed on issues of freedom and equality from Reconstruction, urban migration, and civil rights struggles through current consideration of race, class, and gender conflicts.

Core Topics: When Worlds Collide: From Contact to the Constitution Lyerly, Cynthia L  
Fall 2021

This course will examine North American history from the perspective of the collision and exchange of cultures and peoples. From the Mississippian Indian civilization at Cahokia to the Illinois, Iroquois, Algonkian, and other Native American peoples, we will see how Indians resisted, adapted, and interacted with French, English, Spanish, and Dutch Europeans. African peoples were another key part of this cultural collision, as hundreds of thousands were brought to North America in the slave trade. The course ends with the consolidation of white European power in the creation of the United States. Major themes in the course are race, power, and religion.

HIST229701

Russia under the Tsars Eaton, Nicole M  
Fall 2021

In 1721, Peter the Great declared that Russia would be an Empire. That empire survived for almost two hundred years. This course will survey central issues in imperial Russian history, focusing on how the rulers of the Romanov dynasty solidified their rule and incorporated peoples of diverse cultures. Although Peter's dream collapsed in 1917, the key question to be asked in this course is: given all the forces threatening to tear the Russian Empire apart for so long, how was it that it survived--and even expanded--for so long?

HIST240601

This Land is Your Land: U. S. Environmental History Valencius, Conevery B  
Fall 2021

How have different environments, places, and resources shaped American history? We will survey main themes and events in the environmental history of the United States. We move from colonial-era differences in land use through contemporary environmental debates. We ask how American communities have used, defined, and fought over places and natural resources, from bison herds to nuclear stockpiles. We investigate intriguing aspects of our local Massachusetts environment: the Emerald Necklace of parks, the brass hoof prints of Harvard Square, even our nearby reservoir. No background in history is necessary to thrive in this class. Students in the sciences are welcome.

HIST241101

U.S. Civil War and Reconstruction Valencius, Conevery B  
Fall 2021

A hundred and fifty years ago, one part of the United States declared its independence as a separate nation. It almost succeeded. Why did Southern whites seek to secede and how did other Americans resist? What were the legacies of war, emancipation, and Reconstruction? We will investigate how agriculture, racial slavery, economics, environments, foreign relations, naval war, field tactics, and free and enslaved Americans shaped this wrenching upheaval. Through historical accounts, images, music, and discussion, we will explore the causes of the Civil War of 1861-1865, its military and social course, and its consequences for a bloodied and re-made Union.

America's War in Vietnam Jacobs, Seth S  
Fall 2021

This course will examine America's thirty-year military involvement in Southeast Asia, one of the most controversial episodes in U.S. history. Students will read a wide variety of primary and secondary sources, from recently declassified state and Defense Department documents to poetry and short stories. Course readings are selected from various points on the left-right political spectrum, with both "hawks" and "doves" receiving their day in court. Lectures will include the origins of the Cold War; the Eisenhower, Kennedy, Johnson, and Nixon presidencies; antiwar activism and other Vietnam era movements; and American soldiers' experience during and after service in Vietnam.

HIST248701

Race and Identity in African American History Miller, Karen

Fall 2021

This course examines and engages readings that reflect a variety of approaches to questions of racial identity and "American-ness" over time. Textual materials have been selected to illustrate both historical and literary treatments of "race" and "identity" within the context of the United States. How do individuals become conscious of themselves as "racial" beings and as national citizens? How do racial identities comport with other identities? How does racial identity influence or color one's sense of self and relations with others within and outside of one's race? How, ultimately, does race impact the study and writing of history over time?

HIST270301

Is All Commerce Capitalism? Global Histories of Production, Exchange, and Power Kent, Stacie

A

Fall 2021

Fulfills the LAMA Requirement for History Majors Adam Smith famously wrote of "a certain propensity in human nature...to truck, barter, and exchange." Less than a century later Karl Marx observed that capitalism "cannot exist without constantly revolutionizing...the whole relations of society." This course examines both these propositions, asking what role exchange has played in human societies and in what sense capitalism is revolutionary. We study a global range of ancient, medieval, and modern trade networks, modes of production, and social meanings in and around exchange. We investigate connections trade fostered and where power inhered in the production, distribution, and consumption of goods.

Metropolitan America: Cities and Suburbs in the Twentieth Century Glass, Michael

Fall 2021

In 1920, a majority of Americans lived in cities for the first time. By 1990, a majority lived in suburbs. These dramatic shifts influenced every facet of life, from politics to economics, labor to culture. This course surveys these transformations in metropolitan America during the twentieth century. We will examine the history of the built environment; analyze changes in housing, business, work, and consumption; follow the movement of people, capital, and ideas; and assess how various institutions shaped the fate of urban and suburban communities.

Study and Writing: The Partition of India Parthasarathi, Prasannan

Fall 2021

The partition of India in 1947 continues to cast a long shadow over the subcontinent. The Kashmir problem, Hindu nationalism, Islamic revivalism, and the threat of nuclear war are a few of the legacies of partition. In this course students will study why partition happened, the chaos and violence that accompanied the event itself, and its manifold consequences.

Students will undertake primary research on some aspect of partition and write a substantial research paper.

Study and Writing of History: Odd Women to the New Women Ismay, Penelope G

Fall 2021

History Major Standing In the second half of the nineteenth century in Britain, it was discovered that 30% of women of marriageable age remained unmarried. Contemporary observers were alarmed, dubbing it the "redundant woman problem." They proposed shipping these "odd women" off to male-rich colonies. But in addition to proposals for emigration, a number of women started organizations to train these women in occupations that were respectable and could enable them to live independently. In this class, we will use women's magazines to explore why being single in this period was considered so dangerous and how this problem ultimately produced the "new woman."

Farewell to Revolution: Post-Mao China through Film

Mo, Yajun Fall 2021

This seminar explores post-socialist China (1978-present) through its cinematic representation. Throughout the semester, we will view prominent films made in post-Mao era by art-house directors (such as Jia Zhangke) and blockbuster creators (such as Feng Xiaogang) and discuss how Chinese lived through and reflected back on the dramatic changes of the reform era. We will ask: How do contemporary Chinese remember the socialist revolution? What kind of future do they envision for themselves after China embraced global capitalism? How do varied filmmakers address the issues of gender and class inequality, family, ethnicity, modernity, and the nation through film?

Human Rights as History Pendas, Devin O  
Fall 2021

One of the major developments in world history since World War II has been the rise of a universal human rights culture. This course will explore this development in historical perspective, tracing the origins of the language of human rights back to the eighteenth century and the French Revolution and interrogating its development in the nineteenth and twentieth centuries. We will examine the potential of "human rights" in international politics but also the limitations of human rights claims. We will ask who has rights and when and who the major actors are in pushing rights claims: governments, revolutionaries, and NGOs.

The Northern Ireland Troubles Through Film and Media Savage, Robert J  
Fall 2021

Formerly titled History of Northern Ireland, 1912 to the Present This course will explore the Troubles by using a variety of sources to gain a comprehensive understanding of the conflict. We will consider how historians, filmmakers, the broadcast media and creative writers have addressed the Troubles and consider key events that defined a deeply divided society. The course will address how the broadcast media helped undermine the Stormont Government and challenge British policy throughout the conflict. It will address key events including the campaign for civil rights campaign, the role of the Provisional IRA and Loyalist paramilitaries, the peace process which produced the landmark Good Friday Agreement in 1998 and the threat Brexit poses to the stability of Northern Ireland today.

U.S. Foreign Policy I Jacobs, Seth S  
Fall 2021

This course is the first half of a two semester survey of the history of U.S. foreign relations from the Revolutionary War through the present day. Students will examine conflicting interpretations of America's role in the world and trace how that role has changed as the nation grew from thirteen isolated, parochial communities on the Atlantic coast to the greatest military and economic superpower in history. Important topics include the territorial expansion of the American empire, the development of - and debate over - constitutional powers, and the struggle for American markets in Asia and elsewhere.

#### HIST450901

Street Life: Urban Space and Popular Culture Johnson, Marilynn  
Fall 2021

This course looks at the production and uses of urban space through street life and public sociability. Analyzing spatial relations in European, American, and Asian cities, we will explore how ordinary people in the past and present experienced everyday life and how contests over urban space revealed power relations and social identities of gender, class, and race/ethnicity. Beginning in the early modern era, we'll be looking at commonplace street activities such as walking, parading, performance, peddling, slumming, and tourism. We'll also explore the evolving cultures of popular urban spaces like parks, cafes/restaurants, markets, shrines, and public squares. For a final project, students will work collaboratively to develop a digital mapping project on the history of ethnic food and restaurants in Boston.

#### HIST455101

American Hate Lyerly, Cynthia L Fall 2021

Racism is, unfortunately, as American as apple pie and baseball. This course explores the roots of racial hatred and the changes in American racism over time. In addition to studying the ideas that buttress racism, this course will examine case studies of racism in practice, such as the Tuskegee syphilis experiment, convict leasing, segregated recreation, the Trail of Tears and Japanese internment.

HIST530301  
Senior Colloquium: Global Borderlands Picone, Maria de los Angeles  
Fall 2021  
Border regions bring together two seemingly opposing concepts: the definition of dividing line and the looseness of an undefined area. They condense meanings of confrontation and encounter, of division and exchange, of mobility and rigidity. This course will examine studies on border regions, from across the globe since 1750. We will read together works epistemologies of borders as they intersect with nation-making, imperialism, resistance, and the environment.

HIST540501  
Senior Colloquium: Classics in the Writing of U.S. History Richardson, Heather C  
Fall 2021  
Aren't there a number of classic works of American history that everyone must read? Actually, there are a number of classic works of American history that everyone should read, but not many people ever do. These books are not necessarily right --some are desperately wrong-- but they all changed the study of American history. They were touchstones for their generation, and their influence echoes down to the present. This course will examine the texts that shaped American history. In the process, we will try to figure out what makes a book a "classic", and who is welcome to write one.

HIST731001  
Graduate Colloquium: Global Migrations and Diasporas Oh, Arissa H  
Fall 2021  
In this course we will read broadly about the histories of migrations from, to, and within various countries and regions in the world as well as the creation and perpetuation of diasporas. In all cases we will be attentive not just to the usual categories of race, class, gender and sexuality, but also to the way these global migrations and diasporas shape, and are shaped by, other factors such as environmental change, nationalisms, and borders and borderlands.

Colloquium for Master's Degree Students  
Matus, Zachary A Fall 2021  
This graduate colloquium is required for first and second year master's degree students in history. In it, we will explore the basics of a career as a professional historian, exploring the concepts of history, historiography and theory, and practicing how to conduct research, write a variety of historical pieces, teach, design courses, and create museum exhibits. We will also look at how to apply the skills used in graduate school to finding a future either in the academy or as an #altac.

HIST821001  
Graduate Seminar: Medieval History Fleming, Robin  
Fall 2021

Students in this seminar will write original research papers on some topic in medieval social, economic or political history. The topic will be one upon which the student and professor have agreed, and will be based primarily on original sources. Students will not only be required to write a paper, but to read and critique all papers written in the seminar. The final paper will be a polished and rewritten piece incorporating the critiques of the professor and other graduate students in the seminar.

HIST100601  
Asia in the World II Mo, Yajun  
Spring 2022

This course examines Asia in the shaping of the modern world, from competing definitions of empires circa 1800 to the rise of the notion of the twenty-first century as a "Pacific Century." It investigates the definition(s) of Asia as a world region, explores transnational interactions, and emphasizes Asians as historical actors via written, visual, and aural sources. Events are placed in the context of key historical paradigms, including varying definitions of modernity, the rise

of the nation-state, the birth of mass politics, new mechanisms of war, the language of self-determination, changing views of gender, shifting types of media/consumption, etc.

HIST109301  
Modern History I Sessions, Hammond D Spring 2022  
This course is the first half of the History Core. Offered in the spring semester of the academic year. Fulfills the Core History I requirement.. This course covers several centuries of time (prior to 1800) and traces the political, social, economic, and cultural changes that created the modern world. Depending on the expertise of the instructor, different parts of the world may serve as focal points for examining the complex historical processes behind modern-day transnational relationships, values, and ideas. As part of the Core Curriculum, this course seeks to broaden students' intellectual horizons by exposing them to new places, periods, and perspectives.

HIST151301  
Powering America: The Past and Future of Energy, Technology, and the Environment  
Valencius, Conevery B  
Spring 2022  
This is a Complex Problems course and is open to Freshman only. This course explores U.S. energy. From the perspectives of history, culture, technology, engineering, and foreign policy, we ask how we have created and distributed energy in the past, how energy systems function in the present, and how they may evolve. We investigate energy production, distribution, and use-- coal, oil, nuclear power, hydropower, wind, and solar power--along with cables, pipelines, and transmission systems. Through hands-on exercises and field trips, students learn how past technological and economic choices shaped current U.S. energy systems, how energy systems affect the environment, and how sustainable energy systems will be in the future.

HIST161701  
Making the Modern World: Design, Ethics, and Engineering Tonn, Jenna A  
Spring 2022  
This is a Complex Problems course and is open to FRESHMEN only. You must also register for an accompanying lab and PODS discussion section. Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters; balance financial, technological, and regulatory pressures associated with complex socio-technical problems; and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Students will collaborate on group design projects based on human-centered engineering. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this class students will explore the social, cultural, and institutional history of engineering; learn foundational skills in quantitative analysis of real-world engineering designs; and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world.

HIST170501  
Revolutionary Media: How Books Changed History Reinburg, Virginia  
Spring 2022  
How have books and reading shaped the modern world? The printing press changed the course of history in Europe and the Americas. This course centers on the book as a vehicle for the production and spread of ideas during the first three centuries of printing (1450-1800). By paying close attention to the material book and its makers, authors, printers, readers, and owners we will explore some of the eras great political and cultural upheavals, especially the Reformation, scientific revolution, and revolutions in France, North America, Haiti. Such events appear as more intensely human and local when seen through the lens of printed books, their makers, and their readers.

HIST172801  
Holocaust, History, & Representation & Memory Pendas, Devin O  
Spring 2022  
This course takes the grave topic of the Holocaust, a seminal event in the twentieth century from which the legal framework of human rights and genocide emerged, as an entry point into discussing the intersection between art and history. The first part of the semester on origins engages students to think critically about structural racism outside of a US context as race intersected with religious identity. The second portion introduces the concept of testimony and witnessing as a tool for knowing events. The third portion on aftermaths and legacies extends the idea of testimonials to the courtrooms of international law and later representations that utilized testimony as their basis.

HIST172901  
Encountering Confinement: The Historical Politics of Mass Incarceration Nieto, Carlos Gerardo  
Spring 2022  
How does carceral power function in places where youths live? The United States currently incarcerates more of its citizens than any other country does, most of whom are members of disadvantaged social groups. How have experiences of confinement reorganized the social worlds of individuals, families, and communities? Although confinement is associated with prisons, the paired courses will familiarize students with the myriad sites and architectures of confinement (i.e., schools, hospitals, detention centers, and systemically neglected neighborhoods). Students will learn to recognize the roles of race, gender, age, and class in these forms of captivity and discuss the historic and present causes and effects of these incarceration sites and constrained opportunities.

HIST180301  
The American Pacific DEPT  
Spring 2022  
This course explores the U.S.' role in constructing and perpetuating an American Pacific. How have Americans imagined, understood and interacted with the people and nations in and around the Pacific Ocean? How have relations with the nations of the Pacific Rim influenced Americans' view of themselves? How have economic, cultural and military activities contributed to America's rise as an imperialist power in this region? Rather than focusing on high politics and diplomacy, we will examine the American Pacific as a cultural, gendered, racial, military and political project, and explore themes such as empire, migration, race, sex and war.

HIST180501  
African American History II Miller, Karen  
Spring 2022  
The two-semester survey examines the history and culture of African-Americans from the pre-colonial period to the present. The first semester treats the period before the middle passage, the evolution of slave and free society, development of Black institutions, and emergence of the protest movements through the Civil War's end. During the second semester, the emphases are placed on issues of freedom and equality from Reconstruction, urban migration, civil rights struggles through current consideration of race, class, and gender conflicts.

Podcasting the Ottomans Sajdi, Dana  
Spring 2022  
The Ottoman Empire (1299-1922) connected West Asia, North Africa, and parts of Europe, and was of the largest and longest lasting empires in world history. We will study the history of the Ottoman polity and its multi-religious and multi-ethnic society by taking the Ottoman History Podcast as our main textbook. Students will learn the principles of storytelling and podcasting and will produce a podcast episode in lieu of a final exam.

Disease, Inequity, and Power: Epidemics in Modern History Summers, Martin A  
Spring 2022  
This course uses some of the major disease epidemics over the past 250 years to explore various historical developments in the modern world, all of which have had important political, social, and economic implications for us today. Topics in the course include: smallpox and conquest in the Americas; cholera and industrialization; tuberculosis and (im)migration; yellow fever and imperialism; the Spanish flu and total war; and HIV/AIDS and globalization. Although the course will focus on the U.S. it will occasionally bring in examples from other global regions for the purpose of comparative analysis.

HIST220201  
Greeks and Barbarians Thatcher, Mark R Spring 2022  
In "Greeks and Barbarians," we'll use a combination of written sources, archaeological evidence, and even visual art to investigate the fascinating history of relationships and conflicts between Greeks, Persians, Egyptians, Carthaginians, and more. We'll read a variety of literature in English, such as the histories of Herodotus and Xenophon, the tragedies of Aeschylus and Euripides, and more, to help us figure out what Greeks really thought about barbarians - and about themselves.

HIST220301  
Greco-Roman Egypt DEPT

Spring 2022  
Under rule by the Ptolemaic dynasty, Egypt became the cultural hub of the ancient Mediterranean; when governed by Rome, it provided natural resources to a vast empire. But what of its multiethnic and multilingual population (the indigenous Egyptians, Nubians, Jews, Romans, Greeks, Arabs who inhabited it) and how did Egypt in this period relate to the rest of Africa and neighboring ancient civilizations? By studying literary, documentary, and visual sources, we will examine several fascinating historical figures such as Alexander the Great, Ptolemy Philadelphus, and perhaps the most notorious woman in antiquity, Cleopatra VII. Students will also encounter first-hand evidence of daily life in this region through letters, contracts, petitions, and arrest warrants recorded on potsherds and papyri and preserved for millennia by the desert sands.

HIST222501  
Ancient Medicine Eshleman, Kendra J Spring 2022

This course introduces students to the practice and theory of medicine in ancient Greece and Rome, from the archaic world of Homer (eighth century BCE) to late antiquity and early Christian healing practices. Themes will include shifting understandings of health and the body, revolutions in knowledge of human anatomy and physiology, ethical controversies over human and animal dissection, influential theories of pathology, psychology, pharmacology, and nutrition, the intersection of medicine and religion, and ancient ideas about doctors' responsibility, which, via the Hippocratic Oath, are still with us today. Students interested in history and literature will gain a richer sense of the importance of medicine in ancient society, and its connections to religion, magic and philosophy. Students from a medical and scientific background will discover how perceptions of the body have changed over time and from culture to culture.

HIST244101  
U.S. Political History since 1968 Glass, Michael

Spring 2022  
This course explores the significant political developments that shaped the past fifty years of U.S. history, an era notable for declining faith in government, new rights claims by marginalized citizens, growing partisan polarization, and widening inequality. In addition to tracing the transformation of political parties and their ideological coalitions, we will also ask how social, economic, and cultural changes have influenced political life. Topics include the evolution of 1960s social movements, the rise of the religious Right, the War on Drugs and the carceral state, the AIDS crisis, the politics of globalization, the 2008 financial crisis, and the gig economy.

HIST245001  
Spies, Spying, and the Presidency Gallagher, Charles R

Spring 2022  
This survey course will examine the relationship between U.S. intelligence agencies and their impact on presidential decision-making. We will examine the history of intelligence and the presidency from the period of the American War for Independence through the present U.S. war actions in Iraq and Afghanistan. The course aims not only to provide a discussion of U.S. political history, but also incorporates elements of the relationship between intelligence studies and literature, philosophy, and religion. Questions of civil liberties, legal history, the role of Congress, and moral and ethical questions surrounding the gathering and effectuation of intelligence will be under study.

HIST248401  
Focus on Civil Rights: The Montgomery Bus Boycott Miller, Karen

Spring 2022  
This course dissects the 382-day bus boycott by Montgomery, Alabama's black residents. Though not the first protest of its kind, it introduced two iconic figures to the national stage: Martin Luther King, Jr. and Rosa Parks. Four simple questions provide the foundation for the class, but the answers are unexpectedly complicated: What "law" did Parks violate? Why did Montgomery's black residents rally around Parks' 1955 arrest? How did Rev. King become the boycott's "voice" and "face," even though he was a relative newcomer to the city? How did this lengthy boycott change Montgomery's black community in the short term?

Colonial Pasts/Global Presents Kent, Stacie A

Spring 2022

Fulfills the Non-Western Requirement for History Majors. While scholars of globalization often proclaim the novelty of the present, historians have become suspicious that deeper connections exist between global, networked presents, and colonial pasts. In this course we will study a variety of colonial histories from the eighteenth and nineteenth centuries and investigate whether and in what ways that history remains with us today. Our examples will come from Euroamerican colonial empires, and topics will include commodity production and circulation, work regimes, labor migrations, gender and sex, development, science, medicine, and racial epistemologies.

Colonial Korea and its Legacies Hwang, Ingu

Spring 2022

This course explores Korea's experience under Japanese colonial rule (1910-1945) as well as how this experience was remembered and represented in the post-colonial era. Students will explore the three phases of Japanese rule: military rule (1910-1919); cultural rule (1919-1931), and wartime mobilization (1931-1945) and how each of these phases have shaped and continue to shape Korean national identity and politics, socioeconomic development, and memory culture. The course draws on historical and literary texts as well as film and other visual sources. This course combines lecture with active student discussion and presentations.

Development and Social Justice in Korea Hwang, Ingu

Spring 2022

This course introduces students to the political and economic changes that South Korea experienced from the 1960s to the present and explores how these changes contributed to social unrest, to demands for greater democracy, and to other social justice issues. In doing so, it will address how South Korea's economic and political trajectory was informed by pressures at the international, national, and sub-national level and compare the South Korean case to that of other Asian nations.

HIST312001

Study and Writing: The Arabian Nights from Baghdad to Hollywood Sajdi, Dana

Spring 2022

The seminar will examine the history of the famous Arabic popular oral romance, A Thousand and One Nights (Arabic, *alf layla wa layla*), from its earliest Indian roots to its passage in Iran, to its incubation in medieval Baghdad, Damascus and Cairo, to its "discovery" by Victorian gentlemen, to its consumption all the way from Hawaii to Japan, to its adaptation to music, dance, film, and painting, to its production as a play here at BC this semester! Underlying the movement of the "Arabian Nights" from a regional Arabic popular romance to world literature is the colonial project. Thus, the history of The Arabian Nights from Baghdad to Hollywood touches on a wide range of important issues, including oral and written cultures, literary transitions to modernity, gender and sexuality, Orientalism, the colonial encounter, and the post-colonial condition. Students will learn how to treat different media of representation as sources for history and to discover in these cultural products clues, myths, and testaments relating to politics, society, and economy.

HIST324001

Study and Writing of History: The Scientific Revolution Matus, Zachary A

Spring 2022

Fulfills major requirement for Study and Writing of History. What was the Scientific Revolution? Students will tackle this question as well as the very messy, all-too-human context of scientific development ca. 1450-1700. Using primary sources (in translation when necessary) including holdings from the Burns Library, students will engage with the philosophers, physicians, alchemists, astronomers, and explorers whose complicated relationship to historical authorities, other cultures, and empirical realities generated an explosion of literature on the natural world. This course culminates in an original research paper that links the production of scientific ideas to the oft untidy contexts from which they emerged.

HIST348401

Study and Writing of History: Happy Days: The Family in Cold War America Oh, Arissa H

Spring 2022

This course examines the history of the American family from the end of World War II to the late 1960s. We will use a range of primary and secondary sources to explore major issues and themes connected to the family, including the Cold War, the civil rights movement, domesticity, work, and consumption. We will pay special attention to how family life both ideal and lived interacted with changing ideas about gender roles, sexuality, race, and class.

Public Culture in Postwar Japan DEPT

Spring 2022

Fulfills Non-Western Requirement for History Majors. This course explores Japanese public culture since 1945 in terms of institutions, debates, and the media. Topics may include war memory, U.S. military bases, changing social values concerning women and family, ethnic diversity, environmental protest, new (and old) religions, and icons of popular culture. The focus is on recent historical and anthropological work as well as literature and film. Students will have a chance to do some research into an area of their particular interest. Some background in twentieth century Japanese history is recommended.

The Asia Pacific War: A Transnational History Seraphim, Franziska

Spring 2022

Fulfills the Non-Western Requirement for History Majors. This course explores the Second World War in Asia from multiple historical and historiographical perspectives. The term "Asia-Pacific War" explicitly links the conflict between Japan and the United States known as the Pacific War (1941-45) to Japan's expansionist ventures in Korea, Taiwan, the Chinese mainland, and Southeast Asia, and considers the cultural and intellectual dimensions of the war (and the way it is remembered) along with the political and military ones.

Korean War: Conflict, Security, and Peace Hwang, Ingu

Spring 2022

The Korean War (1950-1953) began as a civil war but became a global conflict against the backdrop of the emerging Cold War era. Known as "the Forgotten War" in the U.S., this conflict resulted in 5 million deaths and left an indelible imprint on the world. Seven decades later the Korean peninsula remains divided, and the contentious international security mechanisms engendered by this conflict still shape East Asian relations and U.S. foreign policy. Through engagement with recent historical works, this seminar course will explore the origins

and legacies of this conflict, security options and limitations, and conditions and visions of peace.

HIST404802

Modern Girls: The Woman Question in Twentieth Century China Mo, Yajun

Spring 2022

Fulfills the Non-Western Requirement for History Majors Formerly titled: Women & Gender in Modern China. How have the Chinese defined what it means to be a proper "man" or a "woman"? How have these gender norms and ideologies shaped the life experiences and self-perceptions of individual men and women in modern China? How have they shaped Chinese social, political, economic, and cultural institutions? We will explore these questions by focusing primarily on Chinese women's lives--and the changes in shared social ideas about what women should do and be--from the mid-nineteenth century to the present. The central question animating the course is this: when we foreground gender as a category of analysis, how does history look different?

HIST412301

Gender, Sexuality, and Power in the Ottoman and British Empires Shlala, Elizabeth H

Spring 2022

Fulfills the Non-Western requirement for History Majors. In this course, we will utilize the concept of gender as an analytical tool within the history of empires. We will cover gender theory, the construction of gender identity (male and female), sexuality, power, politics, and culture. To understand how gender functioned within empire, we will undertake a comparative analysis of two of the greatest empires in the world--the Ottoman Empire and the British Empire. We will investigate the ways that race, religion, and class shape women's and gender imperial history.

HIST423401

Machiavelli Unmasked Ross, Sarah

Spring 2022

Journalists and political scientists love the adjective Machiavellian, but who was Machiavelli really? And was he actually Machiavellian? This course puts this troublesome figure under the historical microscope, ultimately using his case to understand the social, political, and cultural forces that formed him. We will read The Prince (of course) but also the Discourses on Livy, and The Mandrake Root, and a veritable mountain of Machiavelli's (often creepy) personal correspondence. To sharpen our image of his world, we will also dig into frantic diplomatic dispatches and inquisitorial trials that illuminate major social conflicts, including religious and gender politics.

HIST424401

Global Political Catholicism Gallagher, Charles R

Spring 2022

This class asks the question, "What has led to the creation and historical persistence of Catholic mass politics?" It begins its historical perspective in modernity, anchored by the publication of the social encyclical *Rerum Novarum* (1891) and ending with Catholic policy in the Obama Administration. We will look at how political parties, movements, and theologians interacted with the Vatican and the wider church. The European Church's phenomenon of "clerico-fascism" during the World War II era will be investigated. Regionally, we will look at how Catholicism has shaped political activism in China, Latin America, Europe, and the United States.

HIST425801

Suspicious Minds: Marx, Nietzsche, Freud Bourq, Julian E

Spring 2022

This course examines three infamously influential intellectuals--Karl Marx, Friedrich Nietzsche, and Sigmund Freud. All three are celebrated figures in the "hermeneutics of suspicion"--the traditions of emancipatory critical thought that have indelibly marked the world since the mid-nineteenth century. In addition to reconstructing these thinkers' basic projects within their historical contexts, we will investigate their long-term influences and assess their untimely relevance and resonance today.

HIST437101

The Inquisition in Spain and Spanish America Sellers-Garcia, Sylvia M

Spring 2022

This lecture and discussion course for advanced students will consider the development of the Spanish Inquisition from its medieval roots to its early nineteenth century demise. Divided roughly between Spain and the Americas, we will consider the following topics: the medieval co-existence of Jews, Muslims, and Christians in Spain; the "re-conquest" of the Iberian peninsula in the fifteenth century and the formation of the inquisition; the theological debates of the sixteenth century that determined the scope of heresy. Our focus will be on using the Inquisition as an insight into early modern culture in both Spain and the Americas.

Domestic Revolutions: Gender, Family, and Childhood in U.S. History Johnson, Marilyn

Spring 2022

Family life and "family values" lay at the heart of many contemporary social and political debates. But family life in the U.S. has never fit static notions of the "traditional" American family. In fact, marriage, family, and childhood have undergone dramatic changes over the past three centuries. This course explores the changing structure, dynamics, and ideology of American family life from the early nineteenth century to the present. In exploring this history, we'll look cross culturally at the experience of immigrant, black, working-class, and LGBTQ families. Students will conduct a final project based on genealogical and historical research into their own family history.

HIST448201

Ghana and the U.S.: Historical and Cultural Connections Miller, Karen

Spring 2022

The course examines selected historical and cultural intersections between Ghana, West Africa, and the United States. We explore "African" and "American" components of African American identity through course readings, film, and lectures that focus on four connected areas: slavery/slave trade, civil rights/independence movements, emigration/immigration, and identity/cultural exchange. Ghana is uniquely situated for such comparative study because of its recurring presence in the unfolding of African American history, including its roles as inspiration to Martin Luther King, home to scholar W.E.B. DuBois, haven to African American emigrants, and producer of the kente cloth many wear.

American Madness: History of Mental Illness in the United States DEPT

Spring 2022

This course explores the history of mental illness in America from the colonial era to the late twentieth century. It examines how ideas about mental illness changed over time; how it was understood by medical professions and laypeople; how ideas about mental illness reflected larger social beliefs about race, gender, and class; and how various strategies for curing mental disease or dealing with the mentally ill have evolved. Topics include: humanitarian reform and the nineteenth-century asylum movement; the history of somatic-based treatments such as hydrotherapy, electroshock treatment, and lobotomy; psychoanalysis; and deinstitutionalization and the community mental health care movement.

The 'Spanish' Flu Pandemic: History, Memory, Forgetting and Rediscovery Beiner, Guy

Spring 2022

In 1918-1919, the deadliest pandemic in history spread across the globe and left unparalleled havoc in the wake of the First World War. Despite the enormity of the event, for most the twentieth century it was subject to historiographical neglect. The course will place the 'Spanish' Flu within a wider context of history of pandemics and will examine this episode in terms of medical, social and cultural history, uncovering its overlooked legacies up to the popular rediscovery of public interest in consequence of the outbreak of COVID-19.

HIST460201

Collecting, Order, Displaying Power: The History of the Modern Museum Burwick, William  
Spring 2022

In this course we will discuss the history and the politics of museums. Our topic will be the formation of modern museums from private collections, eclectic and arcane "Wunderkammern" of the early modern period, 19th century national museums, to the contemporary museums and exhibits. This includes not only what people decided to collect and display, but how people choose to curate displays as expression of cultural and national identity. We also investigate architecture, location, and other relevant special contexts in and around museums. We will discuss both art and natural history museums by focusing on changes in architecture and philosophy of display. We will read Thomas Bernhard's novel *Old Masters* as well as ancillary texts to gain a better understanding of the development of modern museums and the politics that shaped them.

Remembering a Day in History: Bloody Sunday, Northern Ireland 1972-2022 Beiner, Guy

Spring 2022

On 30 January 1972, a British paratrooper unit opened fire on a protest march for civil rights in Derry/Londonderry. The events of that fatal day became a foundational moment for the Northern Irish conflict and their repercussions continued to reverberate over the following fifty years. This course offers a multi-perspective "cubist" exploration of the charged history and memory of "Bloody Sunday" and its many meanings by examining a range of sources, including state documents, legal reports, media reportage, photography, personal testimonies, poetry, songs, fiction, drama, film, visual art, artefacts and commemorative practices.

HIST528101  
Sr. Colloquium: Fascism and Communism Eaton, Nicole M  
Spring 2022  
Formerly Sr. Colloquium: Nazism and Stalinism. This senior colloquium will engage in a comparative study of the politics, society, and cultures of Nazi Germany and the Soviet Union under Stalin. Students will read works on governance, modernization, culture and everyday life, gender and sexuality, wartime encounters, genocide, and historical memory, and will focus on the similarities between the two regimes (the leadership cult, role of the party, mobilization of the masses, and erosion of boundaries between the private and the public) and the differences (the relationship between state and society, dynamics between inclusion and exclusion, and the role of violence in constructing social utopia).

HIST546701  
Senior Colloquium: Freedom in U.S. History Glass, Michael  
Spring 2022  
The coexistence of slavery and freedom has been called the founding paradox of America. Since the Revolutionary Era, freedom has remained central to American identity. Workers developed an ideology of free labor while their bosses protected the prerogatives of free enterprise.  
Government officials appointed themselves the leaders of the free world while establishing laws to support the free market. Feminists demanded reproductive freedom and civil rights activists declared freedom now. Through a close reading of classic books, this course traces the changing definitions of freedom across United States history.

HIST730501  
Graduate Colloquium: Archives and Sources Sellers-Garcia, Sylvia M  
Spring 2022  
Archives and sources are the foundation of historical work, and yet too easily we take for granted the means by which sources are delivered into the present and the ways in which archives shape our historical interpretations. This course will focus on both the theoretical and the practical dimensions of these two processes. What political, sociological, and cultural factors influence the way our sources material, oral, textual become sources? How does a pre-existing conception of an archive, as well as the organization and accessibility of it, influence the way we write history drawn from it? How does the researchers background, orientation, identity, and politics influence how they conceive the archive? This course also places an emphasis on writing, since we will be encountering a range of methodological and stylistic approaches. In turn, the writing assignments will ask students to practice writing in different modes, with a particular emphasis on writing for non-academic audiences.

HIST731101  
Colloquium: Law and History Pendas, Devin O  
Spring 2022  
A range of modern thinkers and scholars, notably Hannah Arendt, Jean-Paul Sartre, as well as Gavin Langmuir have explored the history of Jew-hatred in an attempt to fathom its causes, continuities, and discontinuities. This course will examine their writings as well as other works in order to understand the religious, social, economic, psychological, and political reasons that have been suggested as sources of the phenomenon.

HIST822102  
Graduate Seminar: U.S. since 1900 Johnson, Marilynn  
Spring 2022  
This seminar will explore selected topics in the political, social, and cultural history of the United States in the twentieth century. We will also investigate the types of sources, archives, and methodologies employed by twentieth century historians. Over the course of the semester, students will pursue in-depth research projects on a topic of their choosing using extensive primary and secondary source materials. The final product should be a substantial scholarly paper suitable for presentation at a professional conference or submission for publication in a scholarly journal.

HIST827501  
Capstone: Digital Humanities as Public Scholarship Lehman, Brittany;Naglak, Matthew  
Spring 2022  
Many schools across the United States teach different versions of survey classes for which instructors have to reach outside their own focuses. To do so, those instructors often search for visualizations of historical change, literary development, and examinations of religious networks, depending on the field and course. In this capstone, graduate students will develop projects within their areas of specializations to produce digestible digital exhibits, visualizations, and more that can be made freely available to scholars across the world. The goal would be to promote the free exchange of high quality information and digital sources available in the public domain. Furthermore, through the capstone, students should understand the process of a project from conception to presentation. They should have developed skills engaging metadata, transcription, the process of digitization, and more. Students can bring their own research data from their dissertation project or from previous coursework, or they can be provided with a historical or literary dataset from the Boston College Libraries to utilize over the semester. There are four phases to the class, beginning with performing an environmental scan and writing a proposal for their project. In Phase II and III, students will implement and carry out their projects. Finally in Phase IV, students will engage in peer consulting and prepare their work for online publication.

# Italian

## Italian Courses: Summer 2021

No records found

## Italian Courses: Fall 2021

ITAL100301

Elementary Italian I Santini, Jessica  
Fall 2021

The purpose of this course is to introduce the students to Italian language and culture. In the first semester students will learn the Italian sound system and the rudiments of vocabulary and grammar necessary for basic communication. While memorization and mechanical practice are required, the greater part of class time will be dedicated to practicing acquired knowledge in a conversational and contextualized atmosphere.

Dante's "Divine Comedy" in Translation Shepard, Laurie  
Fall 2021

Conducted in English. Elective for Italian major or minor. An introduction to and critical reading of the "Divine Comedy" (in English translation), one of the world's greatest epic poems, produced by "the chief imagination of Christendom" (Yeats). Dante's journey through

Hell, Purgatory, and Paradise will be analyzed at its multiple levels of interpretation: literal and allegorical, theological, philosophical, political, and literary. Compendium of an entire epoch of European civilization, the "Comedy" will also be interrogated for its responses to the fundamental questions of human existence: God, the Cosmos, the Self, Good and Evil, Right and Wrong, Suffering, and Happiness.

Masters of Italian Cinema Acetosio, Mattia  
Fall 2021

Conducted in Italian Italian cinema left an everlasting footprint on Hollywood and cinema worldwide. Generations of filmmakers have recognized their debt towards Italian directors such as Roberto Rossellini, Federico Fellini, Michelangelo Antonioni, and many more. This course follows the footsteps of these masters of Italian cinema. From postwar cinema to today's experimentations, Italian directors have recorded and influenced the cultural evolution of a country that emerged from postwar poverty and became a global symbol of elegance, history and art.

ITAL882201  
Boccaccio and the Comedy of Renaissance Italy Shepard, Laurie  
Fall 2021

Students will learn cutting edge technology and contribute to an interactive website (Commedia! Italian Renaissance Comedy). The first part of the course focuses on the Decameron by Giovanni Boccaccio, the model for Italian prose and source of the witty dialogue of Renaissance comedies. Students will then study comedies written and produced in Siena and Florence in the first half of the sixteenth century. After reading the comedies, a common list of theatergrams, or comic stock pieces, will be developed. Students will be invited to transcribe a comedy and encode the theatergrams for their final project. Training will be provided. Conducted in Italian

## Italian Courses: Spring 2022

ITAL100401  
Elementary Italian II Santini, Jessica Spring 2022 Conducted in Italian  
Admitted by placement test, consent of instructor, or completion of ITAL1003. This course is a continuation of ITAL1003 and further develops the goals of the first semester. Special attention is given this to the production of more complex speech, the expression of personal opinion, and a deeper knowledge of contemporary Italian culture. More formal writing exercises and reading of authentic texts aid students in reinforcing language skills. A group final project at the end of the course attempts to bring together the themes and experiences from previous study.

#### ITAL555501

Italian Culture Through Popular Song O'Connor, Brian R

Spring 2022

Music has the power to reflect the spirit of a nation and its people; the influences from without and the history within. This course will investigate these phenomena through the mirror of the Italian popular song, from the XIX century to the present. Along the way, we'll listen to and learn about the canzone napoletana, the insulated and nationalistic music of the Fascist regime, the great artists of the Boom years, the cantautori and music of social upheaval of the 60's and 70's, and the fragmented musical scene of today's Italy. We will also focus on

development of language proficiency, both oral and written, through analysis of lyrics, cultural readings, conversation in class, creative composition, and ... maybe even some singing! The course is designed for students who have completed ITAL2214ItalianConversation, Composition and Reading, but may be taken simultaneously with that course. Notes: This is a new course. It is an elective, open to majors, minors, and anyone who took CRRI and CCR II.

Credits: 3

Room and Schedule: Campion Hall 9 MWF 11:00AM-11:50AM Satisfies Core Requirement:

#### ITAL557501

Italy on Stage: A Survey of Italian Theater Bassanese, Fiora A

Spring 2022

Conducted in Italian. This course will explore significant moments in the rich history of Italian theater from its origins on the medieval stage to the contemporary comedy of Nobel laureate Dario Fo. Along the way we will examine the influence of classical antiquity in the Renaissance, the Venetian comedy of Goldoni, the warring egos of Alfieri's tragedies, the high drama of Romanticism and grand opera, and the earthy verismo of Verga. We will conclude with the great international successes of Pirandello and one or two additional modern dramatists. Our study of the texts will be accompanied by a viewing of videotaped performances. This course is open to both qualified undergraduates and graduate students and counts as an elective towards the Italian major and minor.

Credits: 3

Room and Schedule: Lyons Hall 208 Tu 03:00PM-05:20PM Satisfies Core Requirement: None

#### ITAL882501

Italian Novel of the Novecento Acetosio, Mattia

Spring 2022

Conducted in Italian

Open to undergraduates with permission of instructor. The novel is arguably the primary literary form of the Twentieth Century. Italy offered a unique path of experimentation and exploration in this genre, with the psychoanalytical works of Italo Svevo, the magic realism of Dino Buzzati, and the historical works of Elsa Morante, up to the revolution of experimental form led by Italo Calvino. This course analyzes the evolution of the Italian novel, from the late 1900s to the end of the last century, offering a new understanding of this genre through a comparative, interdisciplinary and trans-historical perspective.

INTL225101  
Food, Power, and Politics DEPT  
Summer 2021

This course will seek to provide an intellectual and analytical-driven framework around the question of food as an integral part of any human experience, but particularly our experience with food through across cultures. We each have a unique opportunity to understand better the role of food in each of our lives as we move through this summer program by examining our own cultural and political assumptions and those of others from a new point of view. We can appreciate the lenses brought by other individuals, cultures and places to the acts of eating and producing food. Finally, we can express the human experience of food in ways that represent our understandings, experiences and vision for a healthy, just and pleasurable relationship to food in ways that can be shared and appreciated by others. In eating and producing food, we exist simultaneously in a deeply personal and communal place, a place of the present, past and future in which we are never more and less than human.

Fall 2021

Restricted for rising sophomores (class of 2025) for AY 2021-2022 One of two Where on Earth? courses that introduce International Studies majors to the foundational concepts that illuminate today's world. Taking a cultural and political geography perspective, the course explores topics including borders, development, urbanization, and the Anthropocene, as well as the key role of place in connecting our world. The course also has a digital geo-humanities lab component. We will learn to use digital tools including ArcGIS Online to create maps and storytelling tools. These tools also further our cartographic literacy and promote a critical understanding of how digital tools shape how we view global issues.

Comparative Politics of Populism and Migration in Europe Molles, Elitsa V Fall 2021

Have all European polities and societies become liberal after post-communist transitions? How have populist parties across the Continent transformed discourses, politics, and individual identities? How do race and exclusion of ethnic, religious, or other minorities figure into Europeans' everyday lives? How has migration uprooted social realities across Europe? The course will answer these questions and more through the lens of identity politics. It will trace

and analyze the multiple transformations in Western and Eastern European politics and societies in the contemporary period, through a mix of theoretical texts, current case studies, and non-academic sources.

INTL262501

Religion and Contemporary Terrorism DEPT Fall 2021

Since 9/11 there has been a radical increase in attention to what is casually referred to as religious terrorism. In most cases, the phrase is used to refer to the Islamist terrorism of non-state actors (e.g., Al Qaeda, ISIS, and Boko Haram), but there are other cases (e.g., Anders Breivik's counterjihad violence and Hezbollah's anti-Israeli violence) that might also fit the label. This course examines the relationship between religion and contemporary terrorism by looking at a wide variety of cases and asking: Why do we describe some terrorism as religious? How can we meaningfully separate religious terrorism from secular terrorism? Does it matter if we do so? How do stereotypes about religion and race influence our understanding of these movements and events? And do we even need to talk about religion in order to understand these cases?

INTL270301

Is All Commerce Capitalism? Global Histories of Production, Exchange, and Power Kent, Stacie A Fall 2021

Fulfills the LAMA Requirement for History Majors Adam Smith famously wrote of "a certain propensity in human nature...to truck, barter, and exchange." Less than a century later Karl Marx observed that capitalism "cannot exist without constantly revolutionizing...the whole relations of society." This course examines both these propositions, asking what role exchange has played in human societies and in what sense capitalism is revolutionary. We study a global range of ancient, medieval, and modern trade networks, modes of production, and social meanings in and around exchange. We investigate connections trade fostered and where power inhered in the production, distribution, and consumption of goods.

International Law DEPT

Fall 2021

This course examines the role of international public law (the "law of nations") in the world today. It takes as its starting point the academic (and practical) debate about the utility of international law in world politics. From there, we consider the philosophical foundations of law, the sources of international law, and the application of international law in different arenas. In particular, the course will focus on how international law deals with a number of issues, including the connection between domestic and international law and the laws on territory, jurisdiction, human rights, and security, as well as other relevant topics.

Research Methods in International Studies Kent, Stacie A

Fall 2021

Curious about what international studies could look like in the future? This research methods class begins with questions: what is the possible scope of global studies? What could be its topics, methods, and questions? Rather than learn pre-established research methodologies, students will explore what research into global issues can look like. Taught by a historian, students will read texts from history and anthropology. They will learn how to identify research problems and design methodologies to answer those questions. Students interested in the senior thesis option are particularly encouraged, as the course will provide the opportunity to do preparatory work.

Research Methods in Political Science

Krause, Peter J Fall 2021

Rigorous, systematic research methods are at the foundation of quality scholarship for undergraduates and professors alike. This class will introduce students to a wide array of research methods in an engaging, accessible way. Students will get hands-on training in archival research, interviews, surveys, case studies, lab experiments, participant observation, and statistical analysis. The course will focus on applied methods using scholarship and examples from history, international studies, political science, psychology, and sociology. This is a great course for students thinking about writing a thesis, pursuing a research-focused career, or for those who simply want to supercharge their analytical skills.

## International Studies Courses: Spring 2022

INTL220801  
Filling in the Maps: Geography You Should Know Grant, Andrew N  
Spring 2022

This bi-weekly one-credit course would be offered every semester for juniors or seniors. It has the goal of increasing map literacy so that students can quickly frame global problems by referring to legacies of colonization, settlement, nationalism, language, religion, and environment insofar as they can be reflected in world regions. Prerequisites are Where on Earth OR Intro to IR, which together establish a strong and critical understanding of both the state system and border-spanning historical and geographic connectivities. They provide an excellent basis for approaching world regional maps. Restricted to Int'l Studies Juniors and Seniors.

Credits: 1  
Room and Schedule: Integrated Science Building 204 Th 04:30PM-06:50PM; Meets biweekly

INTL226501  
Governing the Internet: Comparative Perspectives DEPT  
Spring 2022

This course examines regulations of dominant online platforms such as Facebook, Twitter and YouTube in the US legal system and in selected comparative legal systems. Legal topics explore the interconnections among globalization, platform governance, speech, data processing, personal autonomy and democratic self-government. The course will equip students with analytical skills and knowledge that will help them pursue careers related to the laws governing online platforms.

INTL227401  
Development Economics Ferraro, Valeria  
Spring 2022

This course considers what we know about developing countries, and applies economic theory to help us understand the constraints of poverty. We will describe the economies of less developed countries and the lives of the poor, focusing on changes in poverty, inequality, demography, and health. We will consider theories and evidence for why some countries are rich and others poor. We will examine how land, labor, and credit markets function in poor countries and communities, and the consequences for health, education, and child labor. We will consider migration and its consequences and will discuss aid and international institutions.

Credits: 3  
Room and Schedule: O'Neill Library 253 MWF 10:00AM-10:50AM Satisfies Core Requirement: Cultural Diversity

Jewish Media, Arts, and Culture Sienkiewicz, Matthew S  
Spring 2022

Satisfies one of three elective courses required within the Communication major This course looks at current trends in Jewish cultural creativity, considering both diasporic and Israeli film, television, literature, and visual arts. Designed for students with limited knowledge of Judaism and Jewish culture, the class surveys Jewish religious practice, political history, and traditions of cultural expression as it examines media sources that embody, advance, and grapple with ideas from the Jewish past and present. Topics include, but are not limited to, Jewish comedy, Jewish children's media, Jewish memory, the globalization of Israeli television, and Yiddish language media.

21st Century Vatican Diplomacy Martin, Peter G  
Spring 2022

The Holy See maintains interests in every corner of the globe and a striking political influence in the world today. Foreign governments value the impact that partnerships with the Holy See produce for common foreign policy priorities. In this course, students will learn how the Holy See engages with other nations and international organizations on global and regional issues. They will explore its foreign policy priorities and the mechanics of such engagement. The course is taught by a former U.S. diplomat to the Holy See from the point of view of the practitioner, focusing on the day-to-day diplomacy of the most recent pontificates.

INTL254001  
Political Geography and Geopolitics Grant, Andrew N  
Spring 2022

This course provides an understanding of the fields of political geography and geopolitics, which are the study of how politics organizes space and how space influence politics. We will discuss key political geographic concepts including territory, sovereignty, borders, and place, and their history and changing relevance in the face of capitalist globalization and the transition from empires to nation-states. We will also explore three major facets of geopolitics: classic geopolitics, critical geopolitics, and urban geopolitics and their relevance in the contemporary world. Finally, we will explore geographies of peace and conflict and the rise of non-state actors and non-state sovereignty.

INTL270201  
Colonial Pasts/Global Presents Kent, Stacie A  
Spring 2022

Fulfills the Non-Western Requirement for History Majors. While scholars of globalization often proclaim the novelty of the present, historians have become suspicious that deeper connections exist between global, networked presents, and colonial pasts. In this course we will study a variety of colonial histories form the eighteenth and nineteenth centuries and investigate whether and in what ways that history remains with us today. Our examples will come from Euroamerican colonial empires, and topics will include commodity production and circulation, work regimes, labor migrations, gender and sex, development, science, medicine, and racial epistemologies.

INTL284001  
Global China and the Belt and Road Initiative Grant, Andrew N  
Spring 2022

China is increasingly a global player in international development, geopolitics, and soft power influence. This course will explore the history of Global China and its contemporary geographical reach in Asia, Africa, Europe, and the Americas. Touching upon topics including the ancient Silk Road, steppe empires and the tribute system, the century of national humiliation, the Belt and Road Initiative, sensitive borderlands, and issues of security and censorship, the course explores how China is reorienting global geographies. It asks: What about Chinese development is new?

Does it pose a positive alternative to Western-led developmentalism? Why is China's rise so controversial?

Colonial Korea and its Legacies Hwang, Ingu  
Spring 2022

This course explores Korea's experience under Japanese colonial rule (1910-1945) as well as how this experience was remembered and represented in the post-colonial era. Students will explore the three phases of Japanese rule: military rule (1910-1919); cultural rule (1919-1931), and wartime mobilization (1931-1945) and how each of these phases have shaped and continue to shape Korean national identity and politics, socioeconomic development, and memory culture. The course draws on historical and literary texts as well as film and other visual sources. This course combines lecture with active student discussion and presentations.

INTL343001  
Iranian Revolution and its Aftermath Kadivar, Mohammad Ali  
Spring 2022

In the span of a decade from 1977 to 1988, Iranians first participated in one of the major social revolutions of modern history and then after that the Iraqi invasion in 1981, Iran engaged in the longest interstate war of the 20th century. Why did the revolution happen in Iran? What was the connection between war and revolution? What are the consequences of the revolution and war for politics, society, and economy in Iran, and how have Iranian politics and society transformed since 1979 in Iran? These are some of the major questions that we try to answer through this course. Through case studies of Iranian revolution and then Iran-Iraq war, we also study main theories of revolution and war and the legacies of these most dramatic political events for post- revolutionary and post-war societies. We specifically examine the

birth of the Islamic Republic out of the revolution and war and also major episodes of protest and social movements in the Islamic republic.

International Law Nakazato, Hiroshi Spring 2022

This course examines the role of international public law (the "law of nations") in the world today. It takes as its starting point the academic (and practical) debate about the utility of international law in world politics. From there, we consider the philosophical foundations of law, the sources of international law, and the application of international law in different arenas. In particular, the course will focus on how international law deals with a number of issues, including the connection between domestic and international law and the laws on territory, jurisdiction, human rights, and security, as well as other relevant topics.

Korean War: Conflict, Security, and Peace Hwang, Ingu Spring 2022

The Korean War (1950-1953) began as a civil war but became a global conflict against the backdrop of the emerging Cold War era. Known as "the Forgotten War" in the U.S., this conflict resulted in 5 million deaths and left an indelible imprint on the world. Seven decades later the Korean peninsula remains divided, and the contentious international security mechanisms engendered by this conflict still shape East Asian relations and U.S. foreign policy. Through engagement with recent historical works, this seminar course will explore the origins and legacies of this conflict, security options and limitations, and conditions and visions of peace.

INTL424401

Global Political Catholicism Gallagher, Charles R Spring 2022

This class asks the question, "What has led to the creation and historical persistence of Catholic mass politics?" It begins its historical perspective in modernity, anchored by the publication of the social encyclical *Rerum Novarum* (1891) and ending with Catholic policy in the Obama Administration. We will look at how political parties, movements, and theologians interacted with the Vatican and the wider church. The European Church's phenomenon of "clerico-fascism" during the World War II era will be investigated. Regionally, we will look at how Catholicism has shaped political activism in China, Latin America, Europe, and the United States.

Drugs and Money Kent, Stacie A Spring 2022

Fulfills the LAMA Requirement for History Majors Amidst the current U.S. opioid epidemic, this course investigates how the pursuit of profit has intersected with constructions of health, illness, and social vice. Where and how have states and societies supported or tolerated widespread narcotic use? By the same token, what social, economic, and political processes transform use into social shame or criminal behavior? The course will look at the centuries-long opium trade between British India and China, the early history of commercial opioids around the world, and compare two U.S. epidemics in their global and local dimensions crack cocaine in the 1980s and opioids in the 2000s.

## Islamic Civilization and Societies Courses: Fall 2021

ICSP119901

Islamic Civilization DiPasquale, David M Fall 2021

This course introduces the varieties of Islamic civilization from the seventh century to the modern world. It explores not only the tenets of faith and practice, and political, social, theological, and economic history, but also considers Muslim cultural and intellectual contributions, including by women, from Indonesia to Morocco and in the Western world. Students will read primary sources, listen to recordings, and view films. The course will emphasize the variety of experiences of Muslims and their contributions to the world.

ICSP230901

Music and Culture in the Middle East Lucas, Ann E

Fall 2021

This course explores the relationship between different music traditions of the Middle East and their respective cultural contexts. It addresses issues of music's structure and content vis-à-vis its role in social, political, and religious situations in the region; the ways that these forces influence musical aesthetics, while also addressing the role of music in the Middle East historically. The cultural areas covered in this class include the Arab World, Iran, Turkey, and Afghanistan.

ICSP261501

Islam and Liberal Democracy DiPasquale, David M

Fall 2021

We will take advantage of current geopolitical controversies in order to unearth the theoretical core of the debate between Islam and the West. Materials related to the Islamic heritage will be placed next to arguments made on behalf of the West in relation to certain

key issues, such as rights versus duties; religion and freedom; and democracy and progress. Modern, pre-modern, sacred, and secular texts will be studied. How can the secular world defend itself against a critique that begins from a position of faith and emphasizes virtue, God, and justice?

Women and Gender in Islam Delong-Bas, Natana J

Fall 2021

This course explores women and gender roles in Islamic history, civilization, and societies, beginning with the pre-Islamic period and continuing through the present. The goal is to present women and women's issues as central to the main narrative of Islamic history, rather than as a side story. This course explores questions related to both historical and contemporary religious interpretation and practice, Sunni, Shia and Sufi, as well as the impact of religion and gender constructs on women's access to the public sphere, positions of leadership, and legal status.

ICSP206601  
Edifying Books on the Arab-Israeli Conflict Salameh, Franck  
Spring 2022  
With the aim of gaining a deeper understanding of the antagonisms riving and riveting Arab and Jew, this course seeks to discuss edifying books on the Arab-Israeli conflict, analyzing their themes, probing their authors voices, examining temperaments, opinions, political engagements, and attitudes of self and other, and each of the actors/authors' narratives. The course will embark with a critical historical analysis of what is colloquially known as the Arab-Israeli conflict, bringing special attention to splintering empires Post-WWI (both in the Middle East and Europe,) delving into the complex unresolved legacies of multiple identities and the political and cultural conflicts that accompanied the emergence of a new Middle Eastern state system. The course will then proceed to the analysis of various narrative voices of the Arab-Israeli Conflict, interrogating key concepts such as identity, memory, state, homeland, nationalism, localism, diaspora, Zionism, Arabism, refugees, and citizenship from different Arab and Israeli purviews four Arab and four Israeli voices in total, all eight of which by definition advancing heated, temperamental, personal, seldom unbiased voices. The course will conclude with students selecting one additional book, as part of their Final Paper topic and class presentation, which they will read independently summarizing their books narrative and its authors voice and positionality (that is to say, how the authors identity and world of references inform his/her biases, beliefs, and attitudes relative to the Arab-Israeli conflict.)

ICSP230801  
Music in the Medieval Islamic World Lucas, Ann E  
Spring 2022

This course examines the nature of music in the medieval Islamic world and its relationships with cultural factors that shaped the history of the Arabic, Persian, and Turkish speaking worlds after the rise of Islam. The course will cover a period of history from the rise of the Ummayyad Caliphate (c. 660), through the Perso-Islamic empires of the thirteenth, fourteenth, and fifteenth centuries. Some aspects of music under the Safavid and Moghul Empires during the sixteenth century will also be addressed. Topics covered in this course include: the place of music in the context of Islamic philosophy, the function of music within the Islamic Caliphate, the use of music in Islamic mysticism and musical changes that occurred in response to the changing nature of Islamic Empire.

ICSP263801  
Islamic Political Philosophy DiPasquale, David M Spring 2022

This course is restricted to sophomores, juniors, and seniors, only.. What is the relationship between philosophy and Islam? Does the divine law (Shari'a) need to be supplemented with purely rational reflections on the nature and purpose of political life? What is the place of toleration and individual rights in the Islamic legal and philosophic tradition? We will explore these and similar questions by focusing on two particularly fertile periods of Islamic thought: the encounter of Islam with Greek philosophy in the classical period and its encounter with the modern secular west in late modernity.

# Jesuit Studies

## Jesuit Studies Courses: Summer 2021

JESU715701

In the Footsteps of Leaders Beaumier, Casey

Summer 2021

This course considers the distinctive methods of Jesuit leadership by situating them in their historical and geographic context. The course begins with ten days of experiential learning in Spain and Rome where students immerse themselves in the key places that became the roots of the Society of Jesus using primary sources to critically examine the decisions and actions of the early Jesuits. The course continues at Boston College with lectures, discussions, and case-study analyses moderated by distinguished leaders of Jesuit apostolates. Students will consider contemporary topics such as the challenges and opportunities experienced by administrators and teachers at secondary and higher-education schools. Coursework features selected readings, workshops, and projects to be completed in small groups. Through this course, students will gain an understanding of the Jesuits' early vision of leadership and of the ways that vision has both changed and remained constant.

## Jesuit Studies Courses: Fall 2021

JESU713101

Social Justice in Jesuit Contexts Casalini, Cristiano

Fall 2021

This is a Graduate-level on-line course.. The Social Apostolate of the Society of Jesus has developed in a variety of ways over the centuries according to the diverse contexts where Jesuits have operated as agents of "social justice." This class offers students both a broad and deep understanding of: (1) How the Society of Jesus developed its mission in support of creating a "preferential option for the poor"; (2) How the Society understood its role to promote liberation from oppression in diverse social environments; (3) What kind of services have been activated by the Society of Jesus in order to fulfill its core values of "the service of faith and promotion of justice"; and (4) How social justice is pursued through pedagogy and practices by Jesuit and Ignatian schools today, given the significant involvement of the Jesuits with formal education on a global scale. The course is designed to foster deep and meaningful conversation among students. It will include individual and collective readings and video-conferences with leaders and teachers of Jesuit schools around the world, deepening students' knowledge of current practices and stimulating dialogue.

JESU715901

A History of The Jesuits Meehan, Seth M

Fall 2021

This is a Graduate-level on-line course.. For nearly five centuries, the Society of Jesus has been one of the most successful and, at times, most controversial religious orders in the Catholic Church. A History of the Jesuits offers an introductory survey to this rich and varied past with particular attention, following the Jesuits' suppression in 1773, to various enterprises and enterprises in the Americas. The course seeks to answer these questions: What have been the characteristics of the Society of Jesus and its associated works? And how and why have those characteristics remained the same or changed? Complementing the other courses in the Certificate program, the course traces the development, expansion, suppression, restoration, and recent developments of the Society of Jesus by closely examining the historical contributions of significant Jesuits.

## Jesuit Studies Courses: Spring 2022

JESU713201

Discernment and Prayer in the Spiritual Exercises of St. Ignatius Geger, Barton T

Spring 2022

This is a Graduate level online course. . A study of the spiritual doctrine of St. Ignatius Loyola as articulated in the text of the Spiritual Exercises, but with reference to other texts such as Ignatius' Testament, letters, and the Constitutions of the Society of Jesus. The focus is how Ignatius' treatment of prayer, discernment of spirits, and discernment of God's will, work together to form a "contemplative in action."

JESU715801

Jesuit Pedagogy Casalini, Cristiano Spring 2022

This is an online course.. This three-credit, graduate-level online course examines the distinctiveness of the Jesuits' approaches to teaching and of their philosophy of education that have propelled their schools to unprecedented success over the centuries. One key to the unprecedented success of Jesuit education has been the tension between the recognizable mark of uniformity that long distinguished the methods, contents, and practices of Jesuit schools and their ability to adapt to different contexts and times. Both aspects-the uniformity and the adaptability-were explicitly supported by the "Ratio studiorum," the Jesuits' foundational plan of studies issued in 1599, which, despite the schools' many variations and complexities, has retained some influence over time. With the "Ratio" discarded, Jesuit schools had to clarify what made them distinctively Jesuit, reconciling their mission with the contemporary world. This

three-credit, graduate-level class sketches the developments of Jesuit educational endeavors by focusing on both the permanent and changing traits of its distinctive pedagogy.

## Journalism Courses: Fall 2021

JOUR200001

Introduction to Journalism Convey, Kevin

Fall 2021

Senior Journalism minors only - required Journalism course. To be taken in Freshman, Sophomore, or Junior year. Organized like a professional newsroom, this course will give students interested in journalism a taste of its various facets, including topic-generation, reporting, interviewing, and editing, for print, broadcast, and online media. It will cover basic newswriting, beat reporting, investigative journalism, feature writing, and writing for the web, and provide an introduction to media law and ethics and the business and history of journalism. Students will produce a feature-length final project and will also work in teams to formulate, report, and write investigative stories. Student should expect to meet deadlines and high standards of grammar, style, punctuation, and factual accuracy.

Sports, Media, Culture Serazio, Michael J

Fall 2021

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

JOUR220001

The Underground Press Ards, Angela

Fall 2021

Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. Note to all students: This course is included in CORE - Engaging Differences and Justice. The underground press was a vast network of loosely affiliated newspapers that emerged in the 1950s and 60s when young people asked very hard questions about the meaning of power and the role of the press. The outsider outlets spread through hundreds of communities throughout the nation, ranging from big city weeklies like "The Village Voice" and the Berkeley "Barb" to specialized periodicals representing the Black press, as well as other ethnic newspapers, progressive weeklies, and various conservative perspectives. This course examines the factors that helped pave the way for this journalism of dissent and how this history affects alternative media today.

Journalism and New Media Johnston, Maura K

Fall 2021

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation.". The rise of the internet as a news delivery system has changed the face of the news business, for better or worse, in the twenty-first century. This one semester seminar will trace the history of new media's relationship with journalism while preparing students for the leaner online world. Students will learn about practical matters (storytelling for the web, condensing complex narratives into 140-character missives) while grappling with larger concerns affecting the industry and readers (traffic-based journalism, slippery sourcing) as they report and write on the world around them.

Writing About Popular Music Johnston, Maura K

Fall 2021

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation.". Reporting on popular music is a keenly effective way to take a snapshot of culture as it's happening. In this discussion-intensive class, students will get hands-on tips on how to write about music effectively, hone their critical thinking skills, and examine the ways that the business struggles experienced by both music and publishing have affected the way pop writing is disseminated and consumed. Guest speakers from the music writing world will provide further insights on their career paths, their views on where music is now, and the artists and songs that stoke their passion.

JOUR223801

Food Writing O'Connor, John Fall 2021

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation.". This class takes a close look at the practice and tradition of food journalism, introducing students to narrative techniques, elements of reporting, and works that have shaped the genre. Students will learn how to avoid the clichés and traps of food writing and to develop original, persuasive, surprising ideas about food and the culture of eating. Issues of voice, scene, social observation, and dramatic structure are addressed, with additional attention paid to crafting and pitching articles. Readings will include works from early practitioners like A.

J. Liebling and M.F.K. Fisher and contemporary writings by Gabrielle Hamilton, Frank Bruni, David Foster Wallace, and others.

JOUR225501

Writing Narrative Journalism O'Connor, John Fall 2021

Note to Journalism minors only: this course satisfies the requirement for an elective with a "craft" orientation. "Artificial Paradises": In his 1860 book *Les Paradis Artificiels* (Artificial Paradises) Baudelaire's principal concern is the physical, moral, and psychological effects of hashish. But in a broader sense, the work is also an investigation into the connections between the needs of the body and the hungers of the soul. There can be good uses for vices, Baudelaire seems to be saying--to warm, to illuminate, to ease suffering--and they can reveal our deepest beliefs about who we are, or about the kind of person we imagine ourselves to be. In this class, "vice" can mean anything from the sins Thomas Aquinas enumerated in *Summa Theologica*--pride, envy, anger, lust, sloth, gluttony, avarice (plus despair)--to the over-application of Prudentius's seven virtues of kindness, patience, chastity, humility, temperance, diligence, and charity. And yes, it can also mean the kinds of things you might read about in *Vice* magazine. But this is emphatically not a class for you to write about your vision quest to Joshua Tree or a lost spring break in Cabo. Its aim instead is to show students effective ways to employ vice in journalistic work, to write intelligently about the many-sided imperatives of passion and pleasure, and to develop clear, informed opinions about the subject. Students will submit four original pieces of writing during the semester. Readings will include works by Hunter S. Thompson, Joan Didion, Machado de Assis, Chris Kraus, Chester Himes, Pauline Reage, and others.

JOUR225601

Ground Truth Sennott, Charles Fall 2021

Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. A term borrowed from digital mapping, ground truth argues that reporting from the ground up is a journalists highest calling. This course first explores the idea of truth, from ancient Greece and great theologians to contemporary writers. We will then examine the rise of nationalist leaders around the world weaponizing doubt; how discernible facts and the truth itself have come under attack and; and how news organizations can best live up to Edward R Murrow's admonishment to serve without fear or favor. The course will introduce students to an international survey of ground-level reporting that focuses on the role of the journalist as a witness who speaks truth to power.

## Journalism Courses: Spring 2022

JOUR200001

Introduction to Journalism Marcus, Jon P

Spring 2022

Senior Journalism minors only - required Journalism course. To be taken in Freshman, Sophomore, or Junior year. Organized like a professional newsroom, this course will give students interested in journalism a taste of its various facets, including topic-generation, reporting, interviewing, and editing, for print, broadcast, and online media. It will cover basic news writing, beat reporting, investigative journalism, feature writing, and writing for the web, and provide an introduction to media law and ethics and the business and history of journalism. Students will produce a feature-length final project and will also work in teams to formulate, report, and write investigative stories. Student should expect to meet deadlines and high standards of grammar, style, punctuation, and factual accuracy.

JOUR201601  
Reporting Civil Rights Ards, Angela  
Spring 2022

Note to Journalism minors: this course satisfies the requirement for an elective with a critical orientation." This course explores first-hand accounts from the front lines of movements to advance social justice, from the abolitionist and anti-lynching campaigns of the nineteenth century and those that toppled Jim Crow, to broader issues such as prisons and poverty, immigration and education. Students will develop their knowledge of civil rights reporting history in the U.S, gain skills and practices, and learn how to apply all three in reporting and writing in core beat areas.

Sports, Media, Culture Kim, Kyoung-yim Spring 2022

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

JOUR222501  
Journalism and New Media Johnston, Maura K  
Spring 2022

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation." The rise of the internet as a news delivery system has changed the face of the news business, for better or worse, in the twenty-first century. This one semester seminar will trace the history of new media's relationship with journalism while preparing students for the leaner online world. Students will learn about practical matters (storytelling for the web, condensing complex narratives into 140-character missives) while grappling with larger concerns affecting the industry and readers (traffic-based journalism, slippery sourcing) as they report and write on the world around them.

Writing About Popular Music Johnston, Maura K  
Spring 2022

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation." Reporting on popular music is a keenly effective way to take a snapshot of culture as it's happening. In this discussion-intensive class, students will get hands-on tips on how to write about music effectively, hone their critical thinking skills, and examine the ways that the business struggles experienced by both music and publishing have affected the way pop writing is disseminated and consumed. Guest speakers from the music writing world will provide further insights on their career paths, their views on where music is now, and the artists and songs that stoke their passion.

#### JOUR225301

Topics in Creative Nonfiction: Writing for Magazines Rotella, Carlo  
Spring 2022

In this advanced creative nonfiction writing course we practice and study the craft of magazine writing. We will write and read a variety of articles features, profiles, reviews, columns, essays, etc. and work on professional skills, such as pitching a story and interviewing. We will also consider models provided by accomplished journalists, by reading their work and by having them in for class visits. A variety of writing assignments, workshoping of student prose, and discussion of assigned reading are regular features of the courses workload. Admission to this course is by permission of instructor on the basis of manuscript submission. Please submit up to 8 double-spaced pages of writing, which can be an entire piece, part of a longer piece, or a compilation of shorter ones. You can explain the nature of what you have submitted in an accompanying note, and please also list any writing workshops you have already taken. Be sure to include your name and email address. Materials should be submitted to Carlo Rotella via email (rotellca@bc.edu) before the date on which registration for the next semester begins.

Students will be promptly notified by email as to whether they have been admitted to the course.

#### JOUR225501

Writing Narrative Journalism O'Connor, John  
Spring 2022

Note to Journalism minors only: this course satisfies the requirement for an elective with a "craft" orientation. "Artificial Paradises": In his 1860 book *Les Paradis Artificiels* (Artificial Paradises) Baudelaire's principal concern is the physical, moral, and psychological effects of hashish. But in a broader sense, the work is also an investigation into the connections between the needs of the body and the hungers of the soul. There can be good uses for vices, Baudelaire seems to be saying--to warm, to illuminate, to ease suffering--and they can reveal our deepest beliefs about who we are, or about the kind of person we imagine ourselves to be. In this class, "vice" can mean anything from the sins Thomas Aquinas enumerated in *Summa Theologica*-- pride, envy, anger, lust, sloth, gluttony, avarice (plus despair)--to the over-application of Prudentius's seven virtues of kindness, patience, chastity, humility, temperance, diligence, and charity. And yes, it can also mean the kinds of things you might read about in *Vice* magazine. But this is emphatically not a class for you to write about your vision quest to Joshua Tree or a lost spring break in Cabo. Its aim instead is to show students effective ways to employ vice in journalistic work, to write intelligently about the many-sided imperatives of passion and pleasure, and to develop clear, informed opinions about the subject. Students will submit four original pieces of writing during the semester. Readings will include works by Hunter S. Thompson, Joan Didion, Machado de Assis, Chris Kraus, Chester Himes, Pauline Reage, and others.

#### JOUR225701

Telling Difficult Stories Caswell McCarron, Christine Spring 2022

Note to Journalism minors only: This course satisfies the requirement for an elective with a "critical" orientation. The journalist is offered a unique and personal lens on events that most people can only experience as consumers of media. While many stories are exhilarating to cover, just as many are painful, horrifying, heartbreaking, and extremely difficult to tell. These include such high profile tragedies as the coronavirus pandemic, 9/11, and the Boston Marathon bombing--but also more personal tragedies involving people in our own communities. This course takes a critical look at covering and telling those difficult stories. We will hear from some of the journalists (including but not limited to the instructor) who will share their professional insight into covering the most traumatic stories of their careers, as well as from some of the families and/or victims of these difficult events. Additionally, we will examine the PTSD that often affects journalists and is not limited to first responders and victims. Students should be aware that this course will deal with difficult material including homicide, abduction, suicide, illness, and crime.

#### JOUR225901

Breaking The News Sennott, Charles Spring 2022

Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. The course examines how the decline of local news has left a fractured landscape across the country, with few reporters left to watch the store and hold government accountable. We will first review newspapers in the 1970s and 80s, then study their rapid decline amid the advent of cable news and the internet, and finally assess what this shifting landscape means. As a case study, we will focus on Boston's media landscape: The Boston Globe, WGBH, The Baystate Banner, as well as new digital startups and narrative podcasts. The class will culminate in a trip to WGBH to meet media colleagues who will discuss their craft.

# Linguistics

## Linguistics Courses: Summer 2021

No records found

## Linguistics Courses: Fall 2021

LING310101

General Linguistics Owusu, Augustina Fall 2021

An introduction to linguistics the scientific study of human language and contemporary linguistic theory. Linguists use mathematical systems (often called formal systems) to develop precise theories that help us understand the rich cognitive processes that support our use of language to communicate, to conduct internal monologues, and much more. The course focuses on the major subfields within linguistics: phonetics, phonology, morphology, syntax, and semantics: how do linguists create and manipulate representations of language phenomena, and how do they analyze linguistic data? Our primary data will be from English, but we will also employ data from other languages. No previous exposure to the field is presupposed.

Credits: 3

Room and Schedule: Lyons Hall 202 MWF 10:00AM-10:50AM Satisfies Core Requirement: None

Prerequisites: None Corequisites: None

LING310301

Language and Language Types Thomas, Margaret

Fall 2021

Researches the diversity of natural languages and the limits of that diversity. How are human languages similar, and how are they different? What factors control the attested range of cross-linguistic variation? Focus is on morphological and syntactic data, with some discussion of the genetic (historical) relationships among the world's languages and methodological problems facing modern linguistic typologies.

Credits: 3

Room and Schedule: Lyons Hall 207 TuTh 01:30PM-02:45PM Satisfies Core Requirement: None

Prerequisites: LING3101/ENGL3527 and at least one other course in linguistics recommended.

Corequisites: None

Cross-listed with: ENGL2127 Frequency: Periodically in the Fall Student Level: Both Comments: None Status: Offered

LING321001

Languages of Africa Owusu, Augustina Fall 2021

Introduction to the languages in Africa. 2000 of the worlds 7000 languages are spoken in Africa, making it one of the most linguistically diverse continents. Students will learn about the phonetic, phonological, morphological, syntactic, and semantic features of African languages, and their contributions to modern linguistic theory, with special focus on features such as click consonants and noun class systems found in no other parts of the world. The course also explores historical and typological issues in the classification of African languages, and the linguistic consequences of the continents history of colonialism and high migration. No previous knowledge of any African language is presupposed, but students should have taken at least one previous course in Linguistics.

Credits: 3

Room and Schedule: Lyons Hall 208 MWF 01:00PM-01:50PM Satisfies Core Requirement:

LING333001

The Linguistic Structure of Akan Owusu, Augustina

Spring 2022

In this course, students are encouraged to apply the principles of linguistic analysis to words, phrases and sentences of Akan (a language spoken in Ghana). We will cover areas such as the sound structure of Akan, morphological features such as, inflectional morphology, derivational morphology, reduplication, compounding, and some grammatical properties of the language.

Credits: 3

Room and Schedule: By Arrangement Satisfies Core Requirement: None

Prerequisites: LING3101/ENGL3527 and LING3102/ENGL3392 or equivalent Corequisites: None

Cross-listed with: None Frequency: Periodically Student Level: Both Comments: None Status: Offered

LING335801

The Linguistic Structure of Japanese Thomas, Margaret

Spring 2022

A linguistic outline of the Japanese language. The phonological and writing systems of Japanese and their origins, Japanese morphology, fundamentals of Japanese syntax, and characteristics of Japanese vocabulary.

Credits: 3

Room and Schedule: Gasson Hall 210 TuTh 10:30AM-11:45AM Satisfies Core Requirement:

None

Prerequisites: Exposure to linguistics or to Japanese (but not necessarily to both). Corequisites:

None

Cross-listed with: None

Frequency: Periodically in the Spring Student Level: Both

Comments: None Status: Offered

LING337801

Second Language Acquisition Thomas, Margaret

Spring 2022

An introduction to what it means to learn, and know, a second or foreign language. The course focuses on research carried out since the development of the "interlanguage hypothesis," addressing in particular the role of the learner's native language; debate about the role of input and interaction; research on the social and psychological factors that bear on second language learning. Emphasis is on the acquisition of second-language morphology, grammar, and vocabulary by adults, with some treatment of child language acquisition.

Credits: 3

LING433501

Semantics Owusu, Augustina Spring 2022

This course is an introduction to the study of formal semantics a formal analysis of sentential meaning. In this course, students are introduced to the fundamentals of predicate logic and quantification as they relate to natural language. The course is designed for both students who have little or no background in formal semantics, and students with interest in formal semantics.

## Mathematics Courses: Summer 2021

MATH991101

Doctoral Continuation Assigned, Dept Summer 2021

All students who have been admitted to candidacy for the Ph.D. degree are required to register and pay the fee (tuition credits can be used for this) for doctoral continuation during each semester of their candidacy when they are taking no other courses. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation

## Mathematics Courses: Fall 2021

MATH100201

Functions and Differential Calculus Brooks, Robyn K

Fall 2021

This course is intended for students who are required to take Calculus I (either MATH1100 or MATH1102) but whose backgrounds necessitate additional preparation. Topics include the real line and coordinate plane; linear and quadratic functions; higher degree polynomials and rational functions; trigonometry, emphasizing the trigonometric functions; and exponential and logarithmic functions. Note: This course does not satisfy the University Core Requirement in Mathematics. Department permission is required: see the Assistant Chair for Undergraduates.

MATH110209

Calculus I (Mathematics/Science Majors) Wang, Mujie

Fall 2021

Not open to students who have completed a calculus course at the college level.. MATH1102 is a first course in the calculus of one variable intended for Chemistry, Computer Science/B.S., Geology, Geophysics, Mathematics, and Physics majors. It is open to others who are qualified and desire a more rigorous calculus course than MATH1100. Topics covered include the algebraic and analytic properties of the real number system, functions, limits, derivatives, and an introduction to integration.

Credits: 0

MATH119001

Fundamentals of Mathematics I Belding, Juliana V

Fall 2021

Restricted to Lynch School of Education students.. MATH1190-1191 is a course sequence designed for those who plan to teach mathematics in grades K-8. The emphasis is on building conceptual understanding of the mathematics present in the emerging K-8 curriculum and on deepening content knowledge. Number and number systems through the real number system will be studied; functions and the structure of algebra will be developed. Problem solving and reasoning, applications and making connections will be featured.

Credits: 3

MATH331001  
Introduction to Abstract Algebra Lehmann, Brian T  
Fall 2021  
Students may not take both MATH3310 and MATH3311. This course studies four fundamental algebraic structures: groups, including subgroups, cyclic groups, permutation groups, symmetry groups, and Lagrange's Theorem; rings, including sub-rings, integral domains, and unique factorization domains; polynomials, including a discussion of unique factorization and methods for finding roots; and fields, introducing the basic ideas of field extensions and ruler and compass constructions.  
Credits: 3

MATH332001  
Introduction to Analysis Chen, Qile  
Fall 2021  
Students may not take both MATH3320 and MATH3321. This course gives students the theoretical foundations for the topics taught in Calculus. It covers algebraic and order properties of the real numbers, the least upper bound axiom, limits, continuity, differentiation, the Riemann integral, sequences, and series. Definitions and proofs will be stressed throughout the course.  
Credits: 3  
Room and Schedule: Gasson Hall 210 MWF 12:00 Noon-12:50PM Satisfies Core Requirement: None

MATH444501  
Combinatorics Greene, Joshua E Fall 2021  
Not open to students who have completed MATH2245 or MATH2248 or CSCI2245. This course is an introduction to graph theory and combinatorics, with a strong emphasis on creative problem-solving techniques and connections with other branches of mathematics. Topics will center around enumeration, Hamiltonian and Eulerian cycles, extremal graph theory, planarity, matching, colorability, Ramsey theory, hypergraphs, combinatorial geometry, and applications of linear algebra, probability, polynomials, and topology to combinatorics.  
Credits: 3  
Room and Schedule: Gasson Hall 205 MWF 01:00PM-01:50PM Satisfies Core Requirement: None

MATH446001  
Complex Variables Friedberg, Solomon Fall 2021  
This course gives an introduction to the theory of functions of a complex variable, a fundamental and central area of mathematics. It is intended for mathematics majors and well-prepared science majors. Topics covered include complex numbers and their properties, analytic functions and the Cauchy-Riemann equations, the logarithm and other elementary functions of a complex variable, integration of complex functions, the Cauchy integral theorem and its consequences, power series representation of analytic functions, and the residue theorem and applications to definite integrals.  
Credits: 3  
Room and Schedule: Gasson Hall 304 MW 04:30PM-05:45PM Satisfies Core Requirement: None

MATH447001  
Mathematical Modeling Garvey, Paul R  
Fall 2021  
This course introduces students to methods of mathematical modeling. The emphasis is on ways to analytically represent and study today's complex modeling problems, with cases from the natural and social sciences. Topics include the model building process, mathematical models of systems, and modeling data to discover properties and hidden characteristics. The calculus of finite differences and solutions to classes of difference equations will serve as the core mathematical theory taught in this course. The dynamics of certain linear and nonlinear models will be explored from various domains (e.g., population models, economic models, Markov models). The course will conclude with an introduction to mathematical graph theory and its application to modeling interacting and interdependent systems and networks.  
Credits: 3  
Room and Schedule: Gasson Hall 210 MW 04:30PM-05:45PM Satisfies Core Requirement: None

MATH447501  
History of Mathematics DEPT  
Fall 2021  
This course studies the development of mathematical thought, from ancient times to the twentieth century. Naturally, the subject is much too large for a single semester, so we will concentrate on the major themes and on the contributions of the greatest mathematicians. The emphasis in the course will be on the mathematics. Students will follow the historical arguments and work with the tools and techniques of the period being studied.

Frequency: Every Fall, Every Spring Student Level: Undergraduate Comments: None  
Status: Offered

MATH496108  
Honors Thesis Baldwin, John A Fall 2021  
This course may be taken to complete the requirements for Departmental Honors in Mathematics. Students must make arrangements with an individual faculty member and also receive permission from the Assistant Chair for Undergraduates.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None Corequisites: None Cross-listed with: None  
Frequency: Every Fall, Every Spring Student Level: Undergraduate Comments: None  
Status: Offered

MATH550001  
Advanced Independent Research I DEPT Fall 2021 TBD  
Credits: 3  
Room and Schedule: None Satisfies Core Requirement: None Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Canceled

MATH550001  
Advanced Independent Research I Madapusi Pera, Keerthi S Fall 2021  
TBD  
Credits: 6

Room and Schedule: By Arrangement Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH550002  
Advanced Independent Research I DEPT  
Fall 2021 TBD  
Credits: 3

Room and Schedule: None Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Canceled

MATH550002  
Advanced Independent Research I Mirollo, Renato;Tristan, Jean-Baptiste Fall 2021  
TBD

Credits: 6  
Room and Schedule: By Arrangement Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH550005  
Advanced Independent Research I Madapusi Pera, Keerthi S  
Fall 2021 TBD

Credits: 6  
Room and Schedule: By Arrangement Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH550006  
Advanced Independent Research I Mirollo, Renato;Tristan, Jean-Baptiste Fall 2021  
TBD

Credits: 6  
Room and Schedule: By Arrangement Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH880601  
Algebra I Chen, Qile Fall 2021

This course, with MATH8807, will cover the following topics: group theory (group actions, Sylow, nilpotent/solvable, simple groups, Jordan-Holder series, presentations); commutative algebra (uniqueness of factorization, Jordan decomposition, Dedekind rings, class groups, local rings, Spec); finite fields; algebraic numbers; Galois theory; homological algebra; semisimple algebra.

Credits: 3  
Room and Schedule: Devlin Hall 112 MWF 10:00AM-10:50AM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both Comments: None Status: Offered

MATH880801  
Geometry/Topology I Greene, Joshua E  
Fall 2021

This course, with MATH8809, will cover the following topics: point-set topology, fundamental group and covering spaces, smooth manifolds, smooth maps, partitions of unity, tangent and general vector bundles, (co)homology, tensors, differential forms, integration and Stokes' theorem, and de Rham cohomology.

Credits: 3  
Room and Schedule: Gasson Hall 308 MWF 12:00 Noon-12:50PM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both Comments: None Status: Offered

MATH881001  
Real Analysis Bridgeman, Martin Fall 2021

Measure theory, Hilbert space, and Fourier theory. Possible topics from Lebesgue measure starting on R, convergence and Fubini theorems, and generalizations to locally compact spaces and groups.

Credits: 3  
Room and Schedule: Maloney Hall 560 MW 02:00PM-03:15PM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both Comments: None Status: Offered

MATH882001  
Introduction to Representation Theory Treumann, David L  
Fall 2021

Introduction of a broad range of representation theory, including representations of finite and compact Lie groups, and finite dimensional representations of complex semisimple Lie groups and Lie algebras, and quantum groups.

Credits: 3  
Room and Schedule: O'Neill Library 248 MWF 02:00PM-02:50PM

Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both Comments: None Status: Offered

MATH882101  
Number Theory I Madapusi Pera, Keerthi S Fall 2021

Along with MATH8822, possible topics include factorization of ideals, local fields, local versus global Galois theory, Brauer group, adèles and idèles, class field theory, Dirichlet L-functions, Chebotarev density theorem, class number formula, and Tate's thesis.

Credits: 3  
Room and Schedule: Stokes Hall 2055 MWF 03:00PM-03:50PM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Both Comments: None Status: Offered

MATH883101  
Geometry/Topology III Lindsey, Kathryn A Fall 2021

This course, along with MATH8832, will cover topics from differential geometry, hyperbolic geometry, three-dimensional manifolds, and knot theory.

Credits: 3  
Room and Schedule: Maloney Hall 560 MWF 11:00AM-11:50AM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate Comments: None Status: Offered

MATH884501  
Topics in Algebra and Number Theory Howard, Benjamin V  
Fall 2021

Selected topics in Algebra and Number Theory.  
Credits: 3  
Room and Schedule: Maloney Hall 560 MWF 09:00AM-09:50AM Satisfies Core Requirement: None

Prerequisites: None Corequisites: None Cross-listed with: None  
Frequency: Periodically in the Fall Student Level: Both  
Comments: None Status: Offered

MATH885501  
Topics in Geometry and Topology Biringer, Ian P  
Fall 2021

Selected topics in Geometry and Topology.  
Credits: 3  
Room and Schedule: Stokes Hall 103S MWF 02:00PM-02:50PM Satisfies Core Requirement: None

Prerequisites: None Corequisites: None Cross-listed with: None  
Frequency: Periodically in the Spring Student Level: Graduate Comments: None  
Status: Offered

MATH886501  
Topics in Algebraic Geometry Lehmann, Brian T  
Fall 2021

Selected topics in Algebraic Geometry  
Credits: 3  
Room and Schedule: Gasson Hall 209 MWF 01:00PM-01:50PM Satisfies Core Requirement: None

Prerequisites: None Corequisites: None Cross-listed with: None  
Frequency: Every Fall, Every Spring Student Level: Graduate Comments: None  
Status: Offered

MATH888001  
Dissertation Research Assigned, Dept  
Fall 2021 TBD

Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None  
Frequency: Every Fall Student Level: Graduate Comments: None Status: Suspended

MATH888002  
Dissertation Research Bridgeman, Martin Fall 2021

TBD  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH888003  
Dissertation Research Howard, Benjamin V Fall 2021

TBD  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH888004  
Dissertation Research Grigsby, Julia E  
Fall 2021 TBD

Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None

Frequency: Every Fall  
Student Level: Graduate Comments: None  
Status: Offered

MATH888005  
Dissertation Research Bridgeman, Martin Fall 2021  
TBD  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH888006  
Dissertation Research Reeder, Mark  
Fall 2021 TBD  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH889001  
Graduate Teaching Seminar I Belding, Juliana V  
Fall 2021  
This course is designed to support graduate students in their role as teaching assistants.  
Credits: 1  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH889002  
Graduate Teaching Seminar I DEPT  
Fall 2021  
This course is designed to support graduate students in their role as teaching assistants.  
Credits: 1  
Room and Schedule: None Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Canceled

MATH889101  
Graduate Teaching Seminar II Meyerhof, G R  
Fall 2021  
This course is intended to assist graduate students as they make the transition to teaching fellows.  
Credits: 1  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: None  
Corequisites: None Cross-listed with: None Frequency: Every Fall Student Level: Graduate  
Comments: None Status: Offered

MATH889901  
Readings and Research Chen, Dawei  
Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH889902  
Readings and Research Madapusi Pera, Keerthi S Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH889903  
Readings and Research Chen, Qile  
Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH889904  
Readings and Research Fedorchuk, Maksym Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH889905  
Readings and Research Friedberg, Solomon Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH889906  
Readings and Research Greene, Joshua E  
Fall 2021  
This is an independent study course, taken under the supervision of a Mathematics Department faculty member. Interested students should see the Director of the Graduate Program.  
Credits: 3  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Graduate  
Comments: None  
Status: Offered

MATH991101  
Doctoral Continuation Chen, Dawei  
Fall 2021  
All students who have been admitted to candidacy for the Ph.D. degree are required to register and pay the fee (tuition credits can be used for this) for doctoral continuation during each semester of their candidacy when they are taking no other courses. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation  
Credits: 1  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None  
Frequency: Every Fall, Every Spring, Every Summer Student Level: Graduate  
Comments: None Status: Offered

MATH991102  
Doctoral Continuation Treumann, David L Fall 2021  
All students who have been admitted to candidacy for the Ph.D. degree are required to register and pay the fee (tuition credits can be used for this) for doctoral continuation during each semester of their candidacy when they are taking no other courses. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation  
Credits: 1  
Room and Schedule: BY ARRANGEMENT Satisfies Core Requirement: None Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None  
Frequency: Every Fall, Every Spring, Every Summer Student Level: Graduate  
Comments: None Status: Offered

## Mathematics Courses: Spring 2022

MATH100301  
Functions and Differential Calculus II Goldstein, Ellen J  
Spring 2022  
This course is a continuation of MATH1002  
Credits: 3  
Room and Schedule: Campion Hall 200 MWF 10:00AM-10:50AM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Spring  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH100302  
Functions and Differential Calculus II Brooks, Robyn K  
Spring 2022  
This course is a continuation of MATH1002  
Credits: 3  
Room and Schedule: Gasson Hall 201 MWF 01:00PM-01:50PM Satisfies Core Requirement: None  
Prerequisites: None Corequisites: None Cross-listed with: None Frequency: Every Spring  
Student Level: Undergraduate Comments: None  
Status: Offered

MATH100401  
Finite Probability and Applications Lei, Yusheng  
Spring 2022  
Not open to students who have completed their Mathematics Core Curriculum Requirement without permission of the Department Chairperson (except for Psychology majors completing their second mathematics corequisite).. This course, for students in the humanities, the social sciences, School of Education, and School of Nursing, is an introduction to finite combinatorics and probability, emphasizing applications. Topics include finite sets and partitions, enumeration, probability, expectation, and random variables.  
Credits: 3  
Room and Schedule: Stokes Hall 2955 MWF 09:00AM-09:50AM Satisfies Core Requirement: Mathematics  
Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Undergraduate  
Comments: None  
Status: Offered

MATH100402  
Finite Probability and Applications Zachos, Ioannis  
Spring 2022  
Not open to students who have completed their Mathematics Core Curriculum Requirement without permission of the Department Chairperson (except for Psychology majors completing their second mathematics corequisite).. This course, for students in the humanities, the social sciences, School of Education, and School of Nursing, is an introduction to finite combinatorics and probability, emphasizing applications. Topics include finite sets and partitions, enumeration, probability, expectation, and random variables.  
Credits: 3  
Room and Schedule: Stokes Hall 2955 MWF 10:00AM-10:50AM Satisfies Core Requirement: Mathematics  
Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None  
Frequency: Every Fall, Every Spring Student Level: Undergraduate Comments: None  
Status: Offered

MATH100403  
Finite Probability and Applications Contreras, Ryan  
Spring 2022  
Not open to students who have completed their Mathematics Core Curriculum Requirement without permission of the Department Chairperson (except for Psychology majors completing their second mathematics corequisite).. This course, for students in the humanities, the social sciences, School of Education, and School of Nursing, is an introduction to finite combinatorics and probability, emphasizing applications. Topics include finite sets and partitions, enumeration, probability, expectation, and random variables.  
Credits: 3  
Room and Schedule: Gasson Hall 210 MWF 09:00AM-09:50AM Satisfies Core Requirement: Mathematics  
Prerequisites: Permission of Department Corequisites: None  
Cross-listed with: None Frequency: Every Fall, Every Spring Student Level: Undergraduate  
Comments: None  
Status: Offered

MATH100404  
Finite Probability and Applications Yavuz, Cemre
