

Total Synthesis of (-)-lasonolide A

(-)-lasonolide A

- Lasonolide was discovered in 1994 by McConnell as an antitumor agent from marine organisms.
- In 2002, the correct fully elucidated structure was disclosed in Lee's total synthesis.
- A more concise and efficient synthesis was developed in this work.

Structural Reassignment

Lee (Ref 2)

Synthesis Plan for (-)-Lasonolide A

Scheme 1. Devised synthesis plan

Synthesis of subtarget 1

Zn-catalyzed aldol rxn

Synthesis of subtarget 1

Transacetalization

TPAP/NMO oxidation

TBAF deprotection

Synthesis of subtarget 2

Blaise rxn

Synthesis of subtarget 2

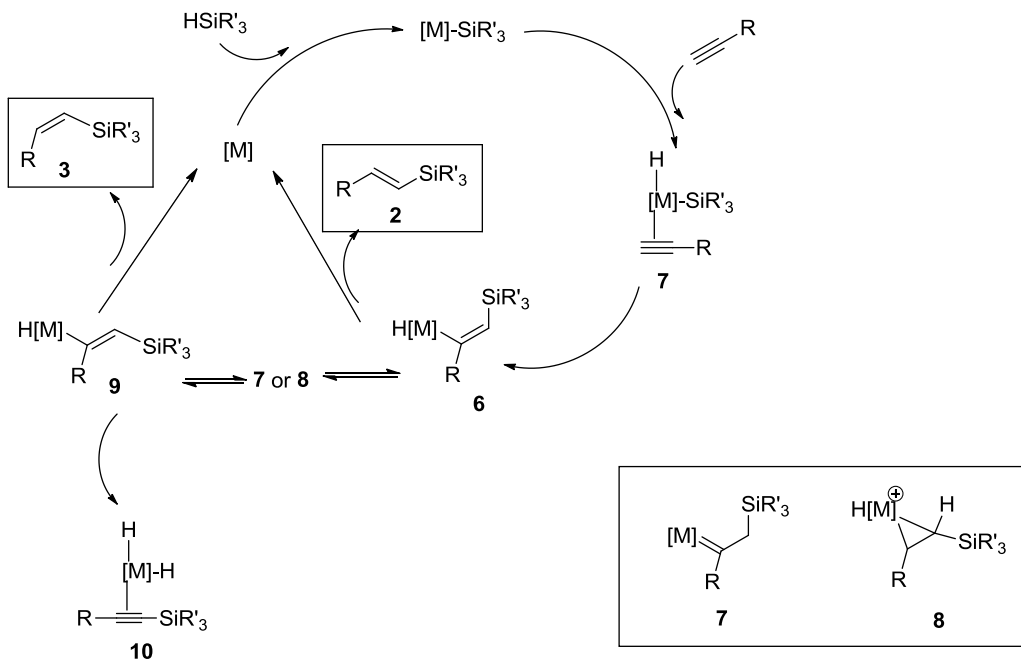

Weinreb amide synthesis and Grignard addition

(S)-CBS reduction

Synthesis of subtarget 2

Ru-catalyzed hydrosilylation

Synthesis of subtarget 2

Allylic oxidation with MnO_2

HWE reaction

Synthesis of subtarget 2

Hiyama coupling

Synthesis of subtarget 3

Carbometallation of propargyl alcohol

Acid-catalyzed ester formation

Phosponium halides formation

Synthesis of subtarget 3

Synthesis of (-)-Lasonolide A

Ru-catalyzed alkene-alkyne coupling

Synthesis of (-)-Lasonolide A

Yamagushi macrolactonization
