# A Ten-Step Total Synthesis of Speradine C

Haichao Liu, Lijun Chen, Kuo Yuan, Yanxing Jia\* *Angew. Chem. Int. Ed.* **2019**, *58*, 6362 - 6365.

- Ergot-like alkaloid in the family of cyclopiazonic acids. It was firstly isolated from *Penicillium cyclopium* and is a mycotoxic metabolite.
- Also is a nanomolar inhibitor of sarco/endoplasmic reticulum Calcium ATPase (SERCA), which is essential for calcium reuptake in muscle contraction and relaxation cycles. SERCA is a promising target for development of new drugs against various diseases and insect pests.
- Speradine C contains an unprecedented 6/5/6/5/6 hexacyclic ring system with a 5,6-dihydroxy-4-oxo-1,3-oxazinane unit and six stereocenters including four oxygen-bearing carbon centers.
- A concise route to Speradine C was enabled by utilizing three different cyclizations to construct four different ring systems, one of which is inspired by the biosynthesis of cyclopiazonic acids.

Speradine C (4)

# Retrosynthesis

## Indole methylation

### Grignard Reaction and alkylation

## Vilsmeier-Haack Reaction

4. LiHMDS, 13 THF, -78 C NHTs 
$$\frac{5. \text{ Tf}_2\text{NH}, \text{CH}_2\text{CI}_2}{35 \text{ C}}$$
 NHTs  $\frac{35 \text{ C}}{16}$  NHTs  $\frac{13 \text{ THF}_1 - 78 \text{ C}}{16}$  NHTs  $\frac{13 \text{ NHT}_2 - 78 \text{ C}}{16}$  NHTs  $\frac{13 \text{ NHT}_3}{10}$  NHTS

#### α-Hydroxylation of ester

#### Cyclization 2: NCS Oxidation

#### Cyclization 3: Ru-catalyzed Ketohydroxylation of Olefin, then hemiacetal formation
