The Behavioral Health of Venezuelan Families in Diaspora

Many Venezuelan crisis migrants are exposed to high levels of stress both before and after migrating. We aim to conduct a definitive study of the Venezuelan diaspora in the US with a comparison sample in Colombia. This study will provide knowledge vital to addressing the immediate and longer-term needs of Venezuelan crisis migrant families and inform responses to future crises.

Post-Maria Puerto Rican Families Relocated to Florida

Our long-term goal is to assist Puerto Rican families in the aftermath of Hurricane Maria. A major part of this goal is identifying intervention strategies to prevent or offset alcohol misuse among adults and

youth who went through the storm. We focus our efforts on alcohol misuse based on findings from our epidemiologic research indicating disconcerting levels of alcohol use among island-born Puerto Ricans before the storm and increases in alcohol misuse in response to trauma and migration-related stressors. The Mental Health Impacts of Exposure to Perceived Racism-Based Police-Involved Interactions

We aim to establish the validity of a survey measure of exposure to racism-based police use of force among Black/African American emerging adults and extend this measure to Latino emerging adults in the United States. In extending our work to Latinos, we will account for three main domains of difference within the population: racial identity, heritage country/region, and nativity.

Longitudinal Determinants of Thriving and Well-Being in Venezuelan Crisis Migrants

The proposed study aims to identify and compare critical elements vis-à-vis the thriving and behavioral health of Venezuelan crisis migrants in the US to those who relocated to Colombia. Findings from this diversity supplement will inform evidence-based policy efforts, the development of culturally relevant responses to future crisis migrations, and the promotion of crisis migrants' well-being.

Crisis Migration and Youth Mental Health: The Moderating Influences of Culture and Context

This project builds upon an actively funded NIMHD grant to expand knowledge about the mental health impacts of crisis migration, which can, in turn, better support crisis migrants. Mixed methods will be used to assess migration experiences, youth mental health impact, and cultural and community factors that may serve positive and protective roles in moderating the mental health effects of crisis migration.

A Longitudinal, Mixed Methods Study of Cascading Disasters and Mental Health After Hurricane María

The R36 focuses on generating evidence for understanding the mental health needs of crisis migrant families. Results will provide a rich understanding of how disasters impact the mental health of migrant populations to influence policy recommendations that aim to reduce mental health disparities.

Understanding the Needs of Post-Maria Puerto Rican Migrants in New Growth Communities

Several years after Hurricane Maria, many Puerto Ricans permanently relocated to the United States. Many Maria survivors are relocating to new-growth communities for better job opportunities and affordable housing. The overall goal of this diversity supplement is to inform the development of evidence-based interventions to reduce mental health and alcohol misuse disparities among families resettling in the new-growth communities.

Social Relationships in Behavioral Health Treatment-Seeking in Post-Maria Puerto Rican Migrants

This award's purpose is to enable promising predoctoral students with the potential to develop into productive, independent research scientists to obtain mentored research training while conducting dissertation research. This proposal investigates how relationships impact behavioral health treatment-seeking among post-Maria Puerto Rican migrants.

Adelante Boricua: The Long-Term Behavioral Health of Puerto Rican Climate Migrants

The proposed project will continue and broaden the scope of the Adelante Boricua study (MD014694), in which we recruited a cohort of María migrants on the U.S. mainland, followed them for four years across six survey time points, and conducted longitudinal qualitative interviews among a subset (~10%). Our proposed renewal will identify key predictors of long-term adjustment among climate migrants and determine how social relationships influence behavioral health, service utilization, and growth/thriving.

Development and Validation of the Crisis Migration Experiences Scale

We aim to adapt and validate the Crisis Migration Experience Scale for crisis migrants relocated from top-priority crisis-sending contexts. This research will shed light on questions related to disparate groups with the shared lived experience of crisis migration, particularly how cumulative risk and resilience factors can affect behavioral health by developing a culturally and contextually appropriate measure.

Longitudinal Effects of Racism-based Police Violence Exposure on Mental and Health Behavior

The proposed research is a longitudinal study of perceived racism-based trauma exposure in response to the National Institute on Minority Health and Health Disparities' call for research examining the impact of racism on health outcomes for ethnic minority populations. We aim to elucidate specific pathways and protective mechanisms related to mental health and health behavior outcomes for Black emerging adults aged 18-25 that can be targeted by mental and behavioral health preventative or intervention programs.

Recreational Cannabis Legalization and Prenatal Substance Use Laws: A Mixed-Methods Study

Recreational cannabis laws (RCL) have recently collided with often decades-old prenatal substance use laws that criminalize women's use through punitive measures. Our study will fill vital gaps in understanding the differential impacts of RCL and child protection laws on pregnant women broadly and women from racial and ethnic groups specifically. Our quantitative and qualitative findings will inform policy and clinical practice related to prenatal substance use laws within the shifting context of cannabis legalization.

Preventing Alcohol and Other Drug Use and Violence among Latino Youth

The social costs of adolescent substance use and violence are staggering. At present, however, our ability to effectively prevent substance use and violence among Latino youth is limited. The overall objective of this study is to adapt a school-based SAMSHA model substance use intervention to include a focus on violence prevention. This includes research and training in qualitative research, intervention adaptation, and prevention implementation and outcomes research.
